

**MILITARY INSTITUTE OF SCIENCE AND TECHNOLOGY**  
**(MIST)**

**SYLLABUS OF**  
**BACHELOR OF SCIENCE IN BIOMEDICAL ENGINEERING**

**DEPARTMENT OF BIOMEDICAL ENGINEERING (BME)**

**December 2020**

---

**COMMITTEE FOR SYLLABUS REVIEW – BME DEPT, MIST**

The undergraduate course curriculum of the Department of Biomedical Engineering (BME), Military Institute of Science and Technology (MIST) has been reviewed by the committee as mentioned below and will be implemented from academic session 2020-2021 (Batch BME-7) and onwards.

**A. President**

---

Colonel Syed Mahfuzur Rahman  
Head, Department of Biomedical Engineering  
Military Institute of Science and Technology

**B. Internal Members**

1. 

---

Commodore M Muzibur Rahman, (E), psc, BN  
Dean, FSE & Head, Dept. of NAME  
Military Institute of Science and Technology
  
2. 

---

Brigadier General A K M Nazrul Islam, Ph.D  
Director, Academics & Dean, FECE and Head, Dept. of EECE  
Military Institute of Science and Technology

3. \_\_\_\_\_  
Colonel Md Mamunur Rashid, afwc, psc  
Head, Dept. of Sc & Hum  
Military Institute of Science and Technology
  
4. \_\_\_\_\_  
Md. Enamul Hoque, Ph.D  
Professor, Dept. of BME  
Military Institute of Science and Technology
  
5. \_\_\_\_\_  
Major Md. Maruf Hasan, Ph.D, EME  
Instructor Class-B, Dept. of BME  
Military Institute of Science and Technology

**C. BUP Members**

1. \_\_\_\_\_  
Brigadier General Md Anwar Shafique, ndc, psc  
Inspector of Colleges  
Bangladesh University of Professionals (BUP)
  
2. \_\_\_\_\_  
Brigadier General Md Zahidur Rahim, ndc, afwc, psc  
Dean, Faculty of Science & Technology  
Bangladesh University of Professionals (BUP)

**D. External Members**

1. \_\_\_\_\_  
Dr. Hasin Anupama Azhari, Ph.D  
Professor & Chairman  
Dept. of Medical Physics and Biomedical Engineering (MPBME)  
Gono Bishwabidyalay

2. \_\_\_\_\_

Muhammad Abdul Kadir, Ph.D

Associate Professor

Dept. of Biomedical Physics and Technology

Dhaka University

3. \_\_\_\_\_

Muhammad Tarik Arafat, Ph.D

Associate Professor

Dept. of Biomedical Engineering

Bangladesh University of Engineering and Technology

**E. Members Secretary**

\_\_\_\_\_  
Major Md. Ashrafuzzaman, Ph.D, EME

Instructor Class-B, Dept. of BME

Military Institute of Science and Technology

---

## CONTENTS

|   |          |
|---|----------|
| <b>CHAPTER 1</b>  | <b>1</b> |
| <b>GENERAL INFORMATION</b>                                      | <b>1</b> |
| 1.1 Introduction to MIST  | 1        |
| 1.2 Vision and Mission of MIST                                  | 1        |
| 1.3 Motto and Values of MIST                                    | 2        |
| 1.4 Eligibility of Students for Admission in MIST               | 2        |
| 1.5 Number of Seats   | 3        |
| 1.6 Admission Procedure   | 5        |
| 1.6.1 Syllabus for Admission Test.                              | 5        |
| 1.6.2 Final Selection   | 5        |
| 1.6.3 Medical Checkup   | 5        |
| 1.7 Students Withdrawal Policy                                  | 5        |
| 1.7.1 For Poor Academic Performance                             | 5        |
| 1.7.2 Withdrawal on Disciplinary Ground                         | 6        |
| 1.7.3 Withdrawal on Own Accord.                                 | 7        |
| <b>CHAPTER 2</b>  | <b>8</b> |
| <b>RULES AND REGULATIONS FOR UNDERGRADUATE PROGRAMS AT MIST</b> | <b>8</b> |
| 2.1 Introduction  | 8        |
| 2.2 The Course System   | 8        |
| 2.3 Number of Terms in a Year                                   | 9        |
| 2.4 Duration of Terms   | 9        |
| 2.5 Course Pattern and Credit Structure                         | 9        |
| 2.6 Course Designation System                                   | 9        |

|        | <i>Contents</i>   |
|--------|---|
| 2.7    | Assignment of Credits 10  |
| 2.8    | Types of Courses 11   |
| 2.9    | Course Offering and Instruction 11                                |
| 2.10   | Teacher Student Interaction 11                                    |
| 2.11   | Student's Adviser 12  |
| 2.12   | Course Registration 12  |
| 2.12.1 | Registration Procedure 12   |
| 2.12.2 | Pre-conditions for Registration 12                                |
| 2.12.3 | Registration Deadline. 13   |
| 2.12.4 | Penalty for Late Registration 13                                  |
| 2.12.5 | Limits on the Credit Hours to be taken 13                         |
| 2.12.6 | Course Add/Drop 13  |
| 2.12.7 | Withdrawal from a Term 14   |
| 2.13   | The Grading System 14   |
| 2.14   | Distribution of Marks 15  |
| 2.14.1 | Theory 15   |
| 2.14.2 | Laboratory/Sessional/Practical Examinations 17                    |
| 2.14.3 | Sessional Course in English 17                                    |
| 2.14.4 | Class Attendance 17   |
| 2.14.5 | Calculation of GPA 18   |
| 2.14.6 | Impacts of Grade Earned 19  |
| 2.15   | Classification of Students 20                                     |
| 2.15.1 | Definition of Graduating Student 21                               |
| 2.16   | Performance Evaluation 21   |
| 2.17   | Application for Graduation and Award of Degree 21                 |
| 2.17.1 | Minimum Earned Credit and GPA Requirement for Obtaining Degree 21 |
| 2.17.2 | Minimum Earned Credit and GPA Requirement for Obtaining Degree 22 |
| 2.18   | Time Limits for Completion of Bachelor's Degree 22                |
| 2.19   | Attendance, Conduct and Discipline 22                             |

|  | <i>Contents</i> |

# CHAPTER 1

## GENERAL INFORMATION

### 1.1 Introduction to MIST

The necessity of establishing a technical institute for the Bangladesh Armed Forces was felt in the late eighties. In the absence of such an institution, officers of Bangladesh Armed Forces had been graduating from Bangladesh University of Engineering and Technology (BUET), Bangladesh Institute of Technology (BIT) and other foreign institutions of science and technology. Intending to meet the increasing demand for the development and dissemination of engineering and technological knowledge, Bangladesh Armed Forces established the Military Institute of Science and Technology (MIST) that promises to provide facilities for higher technical education both for the officers of Bangladesh Armed Forces as well as for civil students from home and abroad. The motto of MIST is —Technology for Advancement. Founded on 19 April 1998, MIST started its journey on 31 January 1999 by offering a four-year bachelor's degree in Civil Engineering. Bachelor degree in Computer Science Engineering course started in 2001. Bachelor courses in Electrical, Electronic & Communication Engineering and Mechanical Engineering started its journey from 2003. Bachelor of Science program on Aeronautical Engineering (AE) and Naval Architecture and Marine Engineering (NAME) program were started from 2008-2009 and 2012-2013 respectively. Besides, four new departments started their academic session from 2014-2015, i.e. Nuclear Science & Engineering (NSE), Biomedical Engineering (BME), Architecture (Arch) and Environmental, Water Resources & Coastal Engineering (EWCE).

### 1.2 Vision and Mission of MIST

**Vision:** To be a centre of excellence for providing advanced quality education in the field of science, engineering, and technology advanced to create diverse quality leaders and professionals and conduct innovative research to meet the national and global needs and challenges.

**Mission:** MIST is working on the following missions:

- a. To develop as a Centre of Excellence for providing comprehensive education and conducting creative and innovative research in diverse disciplines of engineering, technology, science, management and related fields.
- b. To produce technologically advanced intellectual leaders and professionals with high moral and ethical values to meet the national and global needs for sustainable socio-economic development.

- c. To provide consultancy, advisory and testing services to government, industrial, educational and other organizations to render technical support for widening practical knowledge and to contribute to sustainable socio-economic advancement.
- d. To extend collaborative and research activities with national and international communities for life-long learning and long term interaction with the academician and industry.

### **1.3 Motto and Values of MIST**

**Motto:** As an Institution without gender biasness, MIST is steadily upholding its motto "Technology for Advancement" and remains committed to contributing to the wider spectrum of national educational arena, play a significant role in the development of human resources and gradually pursuing its goal to grow into a 'Centre of Excellence'.

**Values:**

- a. **Integrity and Respect**-We embrace honesty, inclusivity, and equity in all that we do.
- b. **Honesty and Accountability**-Our actions reflect our values, and we are accountable for both.
- c. **Dedication to Quality and Intellectual Rigour**-We strive for excellence with energy, commitment, and passion.
- d. **Pursuit of Innovation**-We cultivate creativity, adaptability, and flexibility in our student, faculty, and staff.

### **1.4 Eligibility of Students for Admission in MIST**

The students must fulfill the following requirements:

- a. **Bangladeshi Students.** Minimum qualifications to take part in the admission test are as follows:
  - 1) The applicant must have passed SSC/equivalent examination in Science Group obtaining GPA 4.00 (without fourth subject) in the scale of 5.0 and in HSC/Equivalent examination from Board of Intermediate and Secondary Education/Madrassa Education Board/Technical Education Board in science group the applicant must have obtained minimum 'A+' (Plus) in any TWO (2) subjects out of FIVE (5) subjects including Mathematics, Physics, Chemistry, English, and Bengali and 'A' in rest THREE (3) subjects.

- 2) The applicant must have qualified in minimum of five subjects including Mathematics, Physics, Chemistry and English Language with minimum 'B' in average in GCE 'O' Level and in 'A' level he/she must have obtained minimum 'A' in ONE subject out of three subjects including Mathematics, Physics, and Chemistry with and minimum 'B' in rest TWO subjects.
- 3) Applicants who have passed HSC or equivalent examination in the current year or one year before the notification for admission can apply.
- 4) Sex: Male and Female.

b. **Foreign Students.** Maximum 3% of overall vacancies available will be kept reserved for the foreign students and will be offered to foreign countries through AFD of the Government of the People's Republic of Bangladesh. Applicants must fulfill the following requirements:

- 1) Educational qualifications as applicable for Bangladeshi civil students or equivalent.
- 2) Must have security clearance from respective Embassy/High Commission in Bangladesh.
- 3) Sex: Male and Female.

*\* In the event of non-availability of foreign students, Bangladeshi civil candidates will fill up the vacancies.*

### 1.5 Number of Seats

The highest number of seats for 04 (Four) years Bachelor Degree in Engineering programs (Unit – A) and 5 (Five) years Bachelor Degree of Architecture programs are as follows:

#### Allocation of Seats

| Ser | Unit | Department  | Seats |
|-----|------|---|-------|
| 1   | A    | Civil Engineering (CE)                                    | 60    |
| 2   |      | Computer Science and Engineering (CSE)                    | 60    |
| 3   |      | Electrical, Electronic & Communication Engineering (EECE) | 60    |
| 4   |      | Mechanical Engineering (ME)                               | 60    |
| 5   |      | Aeronautical Engineering (AE)                             | 50    |

|               |          |  |            |
|---------------|----------|--|------------|
| 6             |          | Naval Architecture and Marine Engineering (NAME) | 40         |
| 7             |          | Biomedical Engineering (BME)                     | 40         |
| 8             |          | Nuclear Science and Engineering (NSE)            | 40         |
| 9             |          | Civil & Environmental Engineering                | 60         |
| 10            |          | Civil & Water Resources Engineering              | 50         |
| 11            |          | Industrial and Production Engineering (IPE)      | 50         |
| 12            |          | Petroleum and Mining Engineering (PME)           | 25         |
| 13            | <b>B</b> | Architecture (Arch)                              | 25         |
| <b>Total=</b> |          |  | <b>570</b> |

The total number is 570. In general, about 50% seats will be allocated to military officers. However, in case of the requirement of military students vacancy is less in any particular year, the deficient vacancy will be filled up by civil students. MIST also maintains quota as mentioned below:

| <b>Ser</b>    | <b>Quota Allocation</b>        | <b>Seats</b> |
|---------------|--------------------------------|--------------|
| 1             | General Candidates             | 54%          |
| 2             | Children of Military Personnel | 40%          |
| 3             | Children of Freedom Fighters   | 2%           |
| 4             | Tribal Citizen                 | 1%           |
| 5             | International Students         | 3%           |
| <b>Total=</b> |                                | <b>100%</b>  |

---

## **1.6 Admission Procedure**

### **1.6.1 Syllabus for Admission Test.**

Admission test will be conducted on the basis of the syllabus of Mathematics, Physics, Chemistry and English (comprehension and functional) subjects of HSC examinations of all boards of secondary and higher secondary school certificates. Admission test will be conducted out of 200 marks and the distribution of marks is given below:

| <b>Ser.</b> | <b>Subjects</b> | <b>Marks</b> |
|-------------|-----------------|--------------|
| a.          | Mathematics     | 60           |
| b.          | Physics         | 60           |
| c.          | Chemistry       | 60           |
| d.          | English         | 20           |
| Total=      |                 | 200          |

### **1.6.2 Final Selection**

Students will be selected on the basis of results of the admission test. The individual choice for selection of departments will be given preference as far as possible. In case of tie in the result of admission test, the difference will be judged on the basis of marks obtained in Mathematics, Physics, Chemistry and English respectively in admission test.

### **1.6.3 Medical Checkup**

Civil candidates selected through admission test will go for medical checkup in MIST/CMH. If the medical authority considers any candidate unfit for study in MIST due to critical/contagious/mental diseases as shown in medical policy of MIST will be declared unsuitable for admission.

## **1.7 Students Withdrawal Policy**

### **1.7.1 For Poor Academic Performance**

The undergraduate (B.Sc.) Engineering programs for all engineering disciplines are planned for 04 regular levels, comprising of 08 regular terms for Architecture program, it is

planned for 3 & regular levels, comprising of 10 regular terms. It is expected that all students will earn degree by clearing all the offered courses in the stipulated time. In case of failure, the following policies will be adopted:

- a. Students failing in any course/subject will have to clear/pass the said course/subject by appearing it in supplementary/self-study (for graduating student) examination as per examination policy.
- b. Students may also retake the failed subject/course in regular term/short term as per Examination policy.
- c. Maximum grading for supplementary/self-study examination etc. of failed subjects will be B+ as per examination policy.
- d. One student can retake/reappear in a failed subject/course only twice. However, with the Permission of Academic Council of MIST, a student may be allowed for third time as last chance.
- e. In case of sickness, which leads to missing of more than 40% classes or miss term final examination (supported by requisite medical documents), students may be allowed to withdraw temporarily from that term and repeat the whole level with the regular level in the next academic session, subject to the approval of Academic Council, MIST. However, he/she has to complete the whole undergraduate program within 06 (six) academic years (for Architecture 07 academic years) from the date of his/her registration.
- f. Minimum credit requirement for the award of bachelor's degree in Engineering (B.Sc. Engg) and Architecture (B. Arch) will be decided by the respective department as per existing rules. However, the minimum CGPA requirement for obtaining a bachelor degree in engineering and Architecture is 2.20.
- g. Whatever may be the cases, students have to complete the whole undergraduate Program within 06 (six) academic years from the date of registration.
- h. All other terms and condition of MIST Examination Policy remain valid.

### 1.7.2 Withdrawal on Disciplinary Ground

- a. **Unfair Means.** Adoption of unfair means may result in expulsion of a student from the programme and so from the Institution. The Academic Council will authorize such expulsion on the basis of recommendation of the Disciplinary Committee, MIST and as per policy approved by the affiliating university. Following would be considered as unfair means adopted during examinations and other contexts:

- Communicating with fellow students for obtaining help in the examination
  - Copying from another student's script/ report /paper
  - Copying from desk or palm of a hand or other incrimination documents
  - Possession of any incriminating document whether used or not
- b. Influencing Grades.** Academic Council may expel/withdraw any student for approaching directly or indirectly in any form to influence a teacher or MIST authority for grades.
- c. Other Indiscipline Behaviors.** Academic Council may withdraw/expel any student on disciplinary ground if any form of indiscipline or unruly behavior is seen in him/her which may disrupt the academic environment/program or is considered detrimental to 'MIST's image.
- d. Immediate Action by the Disciplinary Committee of MIST.** The Disciplinary Committee, MIST may take immediate disciplinary action against any student of the Institution. In case of withdrawal/expulsion, the matter will be referred to the Academic Council, MIST for post-facto approval.

### 1.7.3 Withdrawal on Own Accord.

- a. Permanent Withdrawal.** A student who has already completed some courses and has not performed satisfactorily may apply for a withdrawal.
- b. Temporary Withdrawal.** A student, if he/she applies, may be allowed to withdraw temporarily from the program, subject to approval of Academic Council of MIST, but he/she has to complete the whole program within 06 (six) academic years (for Architecture 07 academic years) from the date of his/her registration.

## **CHAPTER 2**

# **RULES AND REGULATIONS FOR UNDERGRADUATE PROGRAMS AT MIST**

### **2.1 Introduction**

MIST has introduced course system for undergraduate studies from the academic session 2017-18. Therefore, the rules and regulations mentioned in this paper will be applicable to students for administering undergraduate curriculum through the Course System. This will be introduced with an aim of creating a continuous, even and consistent workload throughout the term for the students.

### **2.2 The Course System**

- a.** The salient features of the Course System are as follows:

Number of theory courses will be generally 5 in each term. However, with the recommendation of course coordinator and Head of the Department, Commandant MIST may allow relaxation in this regard. This relaxation is to be reported to Academic Council of MIST.

- 1) Students will not face any level repeat for failing
  - 2) Students will get scope to improve their grading
  - 3) Introduction of more optional courses to enable the students to select courses according to their individual needs and preferences
  - 4) Continuous evaluation of 'students' performance
  - 5) Promotion of student-teacher interaction and contact
- b.** Beside the professional courses pertaining to each discipline, the undergraduate curriculum gives a strong emphasis on acquiring thorough knowledge in the basic sciences of mathematics, physics and chemistry. Due importance is also given on the study of several subjects in humanities and social sciences.
- c.** The first two years of 'bachelor's degree programs generally consist of courses on basic engineering, general science and humanities subjects; while the third and subsequent years focus on specific disciplines.

### **2.3 Number of Terms in a Year**

There will be two terms Spring Term (Jan-Jun) and Fall Term (Jul-Dec) in an academic year.

### **2.4 Duration of Terms**

The duration of each of Spring Term and Fall Term (maximum 22 weeks) may be as under:

| <b>Ser</b> | <b>Events</b>                        | <b>Duration</b> |
|------------|--------------------------------------|-----------------|
| 1.         | Classes before Midterm               | 7 weeks         |
| 2.         | Midterm Vacation                     | 1 week          |
| 3.         | Classes after Midterm                | 7 weeks         |
| 4.         | Makeup Classes and Preparatory leave | 2/3 weeks       |
| 5.         | Term Final Examination               | 2/3 weeks       |
| 6.         | Term End Vacation                    | 1/2 weeks       |

### **2.5 Course Pattern and Credit Structure**

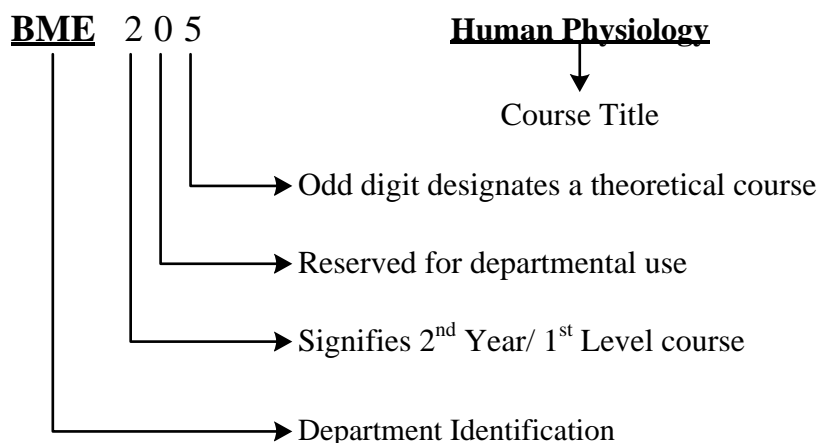

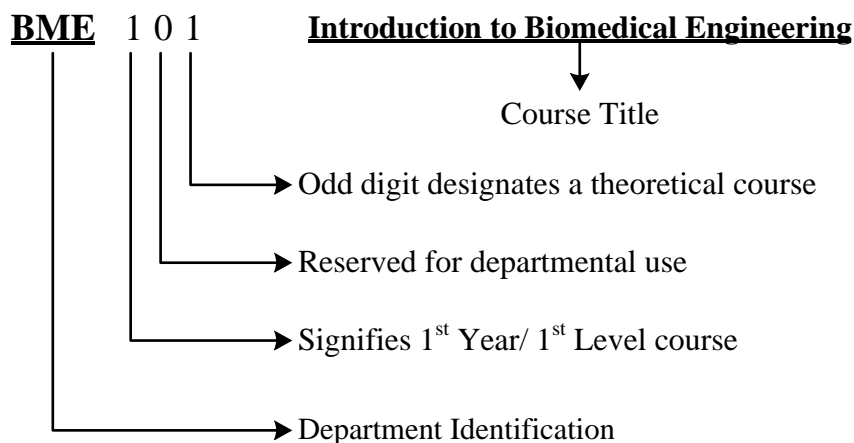

The undergraduate program is covered by a set of theoretical courses along with a set of laboratories (sessional) courses to support them.

### **2.6 Course Designation System**

Each course is designated by a maximum of four-letter code identifying the department offering the course followed by a three-digit number having the following interpretation:

- a. The first digit corresponds to the year/level in which the course is normally taken by the students.
- b. The second digit is reserved for departmental use. It usually identifies a specific area/group of study within the department.
- c. The last digit is an odd number for theoretical courses and an even number for sessional courses.

The course designation system is illustrated as follows:

## 2.7 Assignment of Credits

The assignment of credits to a theoretical course follows a different rule from that of a sessional course.

- a. **Theoretical Courses:** One lecture per week per term is equivalent to one credit.
- b. **Sessional Courses:** Credits for sessional courses is half of the class hours per week per term.
- c. Credits are also assigned to project and thesis work taken by the students. The amount of credits assigned to such work varies from one discipline to another.

## **2.8    Types of Courses**

The types of courses included in the undergraduate curricula are divided into the following groups:

- a. **Core Courses:** In each discipline, a number of courses are identified as core courses, which form the nucleus of the respective bachelor's degree program. A student has to complete all designated core courses of his/her discipline.
- b. **Prerequisite Courses:** Some of the core courses are identified as prerequisite courses for a specific subject.
- c. **Optional Courses:** Apart from the core courses, the students can choose from the set of optional courses. A required number of optional courses from a specified group have to be chosen.

## **2.9    Course Offering and Instruction**

- a. The courses to be offered in a particular term are announced and published in the Course Catalog along with the tentative Term Schedule before the end of the previous term. The courses to be offered in any term will be decided by Board of Undergraduate Studies (BUGS) of the respective department.
- b. Each course is conducted by a course teacher who is responsible for maintaining the expected standard of the course and for the assessment of 'students' performance. Depending on the strength of registered students (i.e. on the number of students) enrolled for the course, the teacher concerned might have course associates and Teaching Assistants (TA) to aid in teaching and assessment.

## **2.10   Teacher Student Interaction**

The new course system encourages students to come in close contact with the teachers. For promotion of a high level of teacher-student interaction, each student is assigned to an adviser and the student is free to discuss all academic matters with his/her adviser. Students are also encouraged to meet any time with other teachers for help and guidance in academic matters. However, students are not allowed to interact with teachers after the moderation of questions.

## **2.11 Student's Adviser**

- a. One adviser is normally appointed for a group of students by the BUGS of the concerned department. The adviser advises each student about the courses to be taken in each term by discussing the academic program of that particular term with the student.
- b. However, it is also the ' 'student's responsibility to keep regular contact with his/her adviser who will review and eventually approve the ' 'student's specific plan of study and monitor subsequent progress of the student.
- c. For a student of second and subsequent terms, the number and nature of courses for which he/she can register are decided on the basis of academic performance during the previous term. The adviser may permit the student to drop one or more courses based on previous academic performance.

## **2.12 Course Registration**

Any student who uses classroom, laboratory facilities or faculty-time is required to register formally. Upon admission to the MIST, students are assigned to advisers. These advisers guide the students in choosing and registering courses.

### **2.12.1 Registration Procedure**

At the commencement of each term, each student has to register for courses in consultation with and under the guidance of his/her adviser. The date, time and venue of registration are announced in advance by the ' 'Registrar's Office. Counseling and advising are accomplished at this time. It is absolutely essential that all the students be present for registration at the specified time.

### **2.12.2 Pre-conditions for Registration**

- a. For first year students, department-wise enrollment/admission is mandatory prior to registration. At the beginning of the first term, an orientation program will be conducted for them where they are handed over with the registration package on submission of the enrolment slip.
- b. Any student, other than the new batch, with outstanding dues to the MIST or a hall of residence is not permitted to register. Each student must clear their dues and obtain a clearance certificate, upon production of which, he/she will be given necessary Course Registration Forms to perform course registration.

- c. A student is allowed to register in a particular course subject to the class capacity constraints and satisfaction of prerequisite courses. However, even if a student fails in a prerequisite course in any term, the concerned department (BUGS) may allow him/her to register for a course which depends upon the prerequisite course provided that his/her attendance and performance in the continuous assessment of the mentioned prerequisite course is found to be satisfactory.

### **2.12.3 Registration Deadline.**

Each student must register for the courses to be taken before the commencement of each term. Late registration is permitted only during the first week of classes. Late registration after this date will not be accepted unless the student submits a written application to the registrar through the concerned Head of the department explaining the reasons for delay. Acceptable reasons may be medical problems with supporting documents from the Medical Officer of MIST or some other academic commitments that prohibit enrollment prior to the last date of registration.

### **2.12.4 Penalty for Late Registration**

Students who fail to register during the designated dates for registration are charged a late registration fee of Tk. 100.00 (One hundred only) per credit hours. Penalty for late registration will not be waived.

### **2.12.5 Limits on the Credit Hours to be taken**

- a. A student should be enrolled for at least 15 credit hours and is allowed to take a maximum of 24 credit hours. Relaxation on minimum credit hours may be allowed. A student must enroll for the sessional courses prescribed in a particular term within the allowable credit hour limits.
- b. In special cases where it is not possible to allot the minimum required 15 credit hours to a student, the concerned department (BUGS) may permit with the approval of the Comdt, a lesser number of credit hours to suit individual requirements. Such cases are also applicable to students of Level 4 requiring less than 15 credit hours for graduation.

### **2.12.6 Course Add/Drop**

- a. A student has some limited options to add or drop courses from the registration list. Addition of courses is allowed only within the first two weeks of a regular

term and only during the first week of a short term. Dropping a course is permitted within the first four weeks of a regular term and two weeks of a short term.

- b. Any student willing to add or drop courses has to fill up a Course Adjustment Form. This also has to be done in consultation with and under the guidance of the ' 'student's respective adviser. The original copy of the Course Adjustment Form has to be submitted to the ' 'Registrar's Office, where the required numbers of photocopies are made for distribution to the concerned adviser, Head, Dean, Controller of Examinations and the student.
- c. All changes must be approved by the adviser and the Head of the concerned department. The Course Adjustment Form has to be submitted after being signed by the concerned persons.

### **2.12.7 Withdrawal from a Term**

If a student is unable to complete the Term Final Examination due to serious illness or serious accident, he/she may apply to the Head of the degree-awarding department for total withdrawal from the term before commencement of term final examination. However, application may be considered during term final examination in special case. The application must be supported by a medical certificate from the Medical Officer of MIST. The concerned student may opt for retaining the sessional courses of the term. The Academic Council will take the final decision about such applications. However, the total duration for graduation will not exceed 6 academic years.

### **2.13 The Grading System**

The total performance of a student in a given course is based on a scheme of continuous assessment, for theory courses this continuous assessment is made through a set of quizzes, class tests, class evaluation, class participation, homework assignment and a term final examination. The assessments for sessional courses are made by evaluating performance of the student at work during the class, viva-voce during laboratory hours and quizzes. Besides that, at the end there will be a final lab test. Each course has a certain number of credits, which describes its corresponding weightages. A student's performance is measured by the number of credits completed satisfactorily and by the weighted average of the grade points earned. A minimum grade point average (GPA) is essential for satisfactory progress. A minimum number of earned

credits also have to be acquired in order to qualify for the degree. Letter grades and corresponding grade points will be given as follows:

| <b>Numerical Markings</b>            | <b>Grade</b> | <b>Grade Points</b> |
|--------------------------------------|--------------|---------------------|
| 80% and above                        | A+           | 4.00                |
| 75% to below 80%                     | A            | 3.75                |
| 70% to below 75%                     | A-           | 3.50                |
| 65% to below 70%                     | B+           | 3.25                |
| 60% to below 65%                     | B            | 3.00                |
| 55% to below 60%                     | B-           | 2.75                |
| 50% to below 55%                     | C+           | 2.50                |
| 45% to below 50%                     | C            | 2.25                |
| 40% to below 45%                     | D            | 2.00                |
| below 40%                            | F*           | 0.00                |
| Incomplete                           | I            | -                   |
| Withdrawal                           | W            | -                   |
| Capstone Project/Thesis Continuation | X            | -                   |

\*Subject in which the student gets F grade shall not be regarded as earned credit hours for the calculation of Grade Point Average (GPA).

## **2.14 Distribution of Marks**

### **2.14.1 Theory**

Forty percent (40%) of marks of a theoretical course shall be allotted for continuous assessment, i.e. quizzes, home assignments, class tests, observations/ class participation and class

attendance. This mark must be submitted to Office of the Controller of Examinations before commencement of final exam. The rest of the marks will be allotted to the Term Final Examination. The duration of final examination will be three (03) hours. The scheme of continuous assessment that a particular teacher would follow for a course will be announced on the first day of the classes.

| <b>Distribution of marks for a given course per credit is as follows</b> | <b>Marks</b> |
|--|--------------|
| Class Performance  | 5%           |
| Class Test/ Assignment   | 20%          |
| Midterm Assessment (Exam/Project)  | 15%          |
| Final Examination (Section A & B)  | 60%          |
| <b>Total =</b>   | <b>100%</b>  |

**Note:**

- a. In final exam, each section can be used for achieving not more than two course outcomes (COs). The remaining COs should be attained from mid-term assessment or class tests. Course teacher has to inform the student the beginning of the terms.
- b. Course teacher of a particular course has to inform the department whether he/she wants to assess mid-term through exam or project within first two weeks of beginning of a term. The duration of mid-term examination should not be more than 50 minutes which has to be conducted in between 6th to 9th week of a semester. If mid-term assessment is done through project, then there should be project report and presentation.
- c. The weightage of class performance can be assessed through checking attentiveness during classes or arranging unnoticed pop quizzes.
- d. The number of class tests shall be  $n$  for 3.0 and above credit courses and  $(n-1)$  shall be considered for grading where  $n$  is the number of credits of the course. However, for courses having credits below 3.0, the considered class tests shall be 2 out of 3.
- e. All class test will carry 20 marks each. Exam software system will finally convert these achieved marks into total class test marks as per credit hour. i.e for  $n=1(20)$ ,  $n=2(40)$ ,  $n=3(60)$ ,  $n=4(80)$ , etc.
- f. Irrespective of the result of the continuous assessment (class performance, class test, mid-term assessment), a student has to appear in the final examination (where applicable) for qualifying/passing the concern course/ subject.

### **2.14.2 Laboratory/Sessional/Practical Examinations**

Laboratory/ Sessional courses are designed and conducted by the concerned departments. Examination on sessional/practical subjects will be conducted by the respective department before the commencement of term final examination. The date of practical examination will be fixed by the respective department. Students will be evaluated in the laboratory/ sessional courses on the basis of the followings:

|                          |   |      |
|--------------------------|---|------|
| a.                       | Conduct of Lab Tests/Class Performance        | 25%  |
| b.                       | Report Writing/ Programming                   | 15%  |
| c.                       | Mid-Term Evaluation (exam/project/assignment) | 20%  |
| d.                       | Final Evaluation (exam/project/assignment)    | 30%  |
| e.                       | Viva Voce/ Presentation                       | 10%  |
| <b>Total Percentage=</b> |   | 100% |

Note: the above distribution of percentage is a general guideline. Department can rearrange to some extent if required.

### **2.14.3 Sessional Course in English**

The distribution will be as under:

|                          |                               |      |
|--------------------------|-------------------------------|------|
| a.                       | Class performance/observation | 10   |
| b.                       | Written Assignment            | 15   |
| c.                       | Oral Performance              | 25   |
| d.                       | Listening Skill               | 10   |
| e.                       | Group Presentation            | 30   |
| f.                       | Viva Voce                     | 10   |
| <b>Total Percentage=</b> |                               | 100% |

### **2.14.4 Class Attendance**

Class attendance may be considered as a part of continuous assessment. No mark should be allotted for attending classes.

### **Collegiate and Non-collegiate**

Students having class attendance of 85% or above in individual subject will be treated as collegiate, and less than 85% and up to 70% will be treated as non-collegiate in that subject. The non-collegiate student(s) may be allowed to appear at the examination subject to payment of non-collegiate fee/fine of an amount fixed by MIST/BUP. Students having class attendance below 70% will be treated as dis-collegiate and will not be allowed to appear at the examination and treated as fail. But in a special case such students may be allowed to appear in the examination with the permission of Commandant and it must be approved by the Academic Council.

#### **2.14.5 Calculation of GPA**

Grade Point Average (GPA) is the weighted average of the grade points obtained of all the courses passed/completed by a student. For example, if a student passes/completes  $n$  courses in a term having credits of  $C_1, C_2, \dots, C_n$  and his grade points in these courses are  $G_1, G_2, \dots, G_n$ , respectively, then

$$\begin{aligned} GPA &= \frac{\text{Grade points earned in the semester}}{\text{Credits completed in the semester}} \\ &= \frac{\text{Summation of (Credit hours in a course * Grade point earned in that course)}}{\text{Total number of credit hours completed}} \\ &= \frac{\sum_{i=1}^n C_i * G_i}{\sum_{i=1}^n C_i} \end{aligned}$$

The Cumulative Grade Point Average (CGPA) is the weighted average of the GPA obtained in all the terms passed/completed by a student. For example, if a student passes/ completes  $n$  terms having total credits of  $TC_1, TC_2, \dots, TC_n$  and his GPA in these terms are  $GPA_1, GPA_2, \dots, GPA_n$ , respectively then

$$CGPA = \frac{\sum_{i=1}^n TC_i * GPA_i}{\sum_{i=1}^n TC_i}$$

**Numerical Example**

Suppose a student has completed eight courses in a term and obtained the following grades:

| Course       | Credits, $C_i$ | Grade | Grade, $G_i$ | Points, $C_i G_i$ |
|--------------|----------------|-------|--------------|-------------------|
| BME 101      | 2.0            | A-    | 3.50         | 7.00              |
| PHY 101      | 3.0            | A+    | 4.00         | 12.00             |
| PHY 102      | 1.5            | A     | 3.75         | 5.625             |
| CHEM 101     | 3.0            | B     | 3.00         | 9.00              |
| CHEM 102     | 1.5            | B-    | 2.75         | 4.125             |
| MATH 101     | 3.0            | A+    | 4.00         | 12.00             |
| LANG 102     | 1.5            | A     | 3.75         | 5.625             |
| GES 101      | 2.0            | A+    | 4.00         | 8.00              |
| GEBS 101     | 2.0            | A-    | 3.50         | 7.00              |
| <b>Total</b> | 19.50          |       |              | 70.375            |

$$\text{GPA} = 70.375/19.50 = 3.60$$

Suppose a student has completed four terms and obtained the following GPA.

| Level        | Term | Credit Earned, $TC_i$ | Hours GPA Earned, $GPA_i$ | $GPA_i \times TC_i$ |
|--------------|------|-----------------------|---------------------------|---------------------|
| 1            | 1    | 19.50                 | 3.73                      | 72.73               |
| 1            | 2    | 22.50                 | 3.93                      | 88.42               |
| 2            | 1    | 21.50                 | 3.96                      | 85.14               |
| 2            | 2    | 20.50                 | 4.00                      | 82.00               |
| <b>Total</b> |      | <b>84.00</b>          |                           | 328.30              |

$$\text{CGPA} = 328.30/84.00 = 3.90$$

**2.14.6 Impacts of Grade Earned**

- d. The courses in which a student has earned a "D" or a higher grade will be counted as credits earned by him/her. Any course in which a student has obtained an "F" grade will not be counted towards his/her earned credits or GPA calculation. However, the "F" grade will remain permanently on the Grade Sheet and the Transcript.
- e. A student who obtains an "F" grade in a core course will have to repeat that particular course. However, if a student gets an "F" in an optional course, he/she may choose to repeat that course or take a substitute course if available. When a student will repeat a course in which he/she has previously obtained an "F", he/she will not be eligible to get a grade better than "B+" in that repeated course.

- f. If a student obtains a grade lower than 'B+' in a particular course he/she will be allowed to repeat the course only once for the purpose of grade improvement. However, he/she will not be eligible to get a grade better than 'B+' for an improvement course.
- g. A student will be permitted to repeat for grade improvement purposes a maximum of 6 courses in BSc. Engineering programs and a maximum of 7 courses in B. Arch. program.
- h. If a student obtains a 'B+' or a better grade in any course he/she will not be allowed to repeat the course for the purpose of grade improvement.

## **2.15 Classification of Students**

At MIST, regular students are classified according to the number of credit hours completed/earned towards a degree. The following classification applies to all the students:

| <b>Level</b> | <b>Credit Hours Earned</b> |                            |
|--------------|----------------------------|----------------------------|
|              | <b><i>Engineering</i></b>  | <b><i>Architecture</i></b> |
| Level 1      | 0.0 to 36.0                | 0.0 to 34.0                |
| Level 2      | More than 36.0 to 72.0     | More than 34.0 to 72.0     |
| Level 3      | More than 72.0 to 108.0    | More than 72.0 to 110.0    |
| Level 4      | More than 108.0            | More than 110.0 to 147.0   |
| Level 5      |                            | More than 147.0            |

However, before the commencement of each term all students other than new batch are classified into three categories:

- a. **Category 1:** This category consists of students who have passed all the courses described for the term. A student belonging to this category will be eligible to register for all courses prescribed for the upcoming term.
- b. **Category 2:** This category consists of students who have earned a minimum of 15 credits but do not belong to category 1. A student belonging to this category is advised to take at least one course less since he might have to register for one or more backlog courses as prescribed by his/her adviser.
- c. **Category 3:** This category consists of students who have failed to earn the minimum required 15 credits in the previous term. A student belonging to this category is advised to take at least two courses less than a category 1 student subject to the constraint of registering at least 15 credits. However, he will also be required to register for backlog courses as prescribed by the adviser.

### **2.15.1 Definition of Graduating Student**

Graduating students are those students who will have  $\leq 24$  credit hour for completing the degree requirement.

### **2.16 Performance Evaluation**

- a. The performance of a student will be evaluated in terms of two indices, viz. Term Grade Point Average and Cumulative Grade Point Average which is the grade average for all the terms completed.
- b. Students will be considered to be making normal progress toward a degree if their Cumulative Grade Point Average (CGPA) for all work attempted is 2.20 or higher. Students who regularly maintain a term GPA of 2.20 or better are making good progress toward the degrees and are in good standing with MIST. Students who fail to maintain this minimum rate of progress will not be in good standing. This can happen when any one of the following conditions exists:
  - 1) The term GPA falls below 2.20.
  - 2) The Cumulative Grade Point Average (CGPA) falls below 2.20.
  - 3) The earned number of credits falls below 15 times the number of terms attended.
- c. All such students can make up their deficiencies in GPA and credit requirements by completing courses in the subsequent term(s) and backlog courses, if there are any, with better grades. When the minimum GPA and credit requirements are achieved the student is again returned to good standing.

### **2.17 Application for Graduation and Award of Degree**

A student who has fulfilled all the academic requirements for 'Bachelor's degree will have to apply to the Controller of Examinations through his/her Adviser for graduation. Provisional Degree will be awarded by BUP on completion of credit and GPA requirements.

#### **2.17.1 Minimum Earned Credit and GPA Requirement for Obtaining Degree**

Minimum credit hour requirements for the award of 'Bachelor's degree in engineering (B.Sc. Engineering) and other discipline will be decided as per existing rules. The minimum CGPA requirement for obtaining a 'Bachelor's degree in engineering and other discipline is 2.20.

### **2.17.2 Minimum Earned Credit and GPA Requirement for Obtaining Degree**

Minimum credit hour requirements for the award of bachelor's degree in engineering (B.Sc. Engineering) and other discipline will be decided as per existing rules. The minimum GPA requirement for obtaining a Bachelor's degree in Engineering and Architecture is 2.20.

### **2.18 Time Limits for Completion of Bachelor's Degree**

A student must complete his studies within a maximum period of six years for engineering and seven years for architecture.

### **2.19 Attendance, Conduct and Discipline**

MIST has strict rules regarding the issues of attendance in class and discipline.

- a. **Attendance:** All students are expected to attend classes regularly. The university believes that attendance is necessary for effective learning. The first responsibility of a student is to attend classes regularly and one is required to attend the classes as per MIST rules.
- b. **Conduct and Discipline:** During their stay in MIST all students are required to abide by the existing rules, regulations and code of conduct. Students are strictly forbidden to form or be members of student organization or political party, club, society etc., other than those set up by MIST authority in order to enhance ' 'student's physical, intellectual, moral and ethical development. Zero tolerance in regards of sexual abuse and harassment in any forms and drug abuse and addiction are strictly observed in the campus.

### **2.20 Teacher-Student Interaction**

The academic system in MIST encourages students to come in close contact with the teachers. For promotion of high level of teacher-student's interaction, a course coordinator is assigned to each course. Students are free to discuss with CC about all academic matters. Students are also encouraged to meet other teachers any time for help and guidance for academic matters. Heads of the departments, Director of Administration, Director of Students Welfare (DSW), Dean and Commandant address the students at some intervals. More so, monthly Commandant's Parade is organized in MIST where all faculty members, staff and students are formed up, thereby increasing teacher-student interaction.

### **2.21 Absence During a Term**

A student should not be absent from quizzes, tests, etc. during the term. Such absence will naturally lead to reduction in points/marks, which count towards the final grade. Absence in the Term Final Examination will result in an F grade in the corresponding course. A student who has been absent for short periods, up to a maximum of three weeks due to illness, should approach the course teacher(s) or the course coordinator(s) for make-up quizzes or assignments immediately upon return to classes. Such request has to be supported by medical certificate from competent authority (e.g. CMH/MIST Medical Officer).

### **2.22 Recognition of Performance**

As recognition of performance and ensure continued studies MIST awards medals, scholarships and stipends will be given as per existing rules and practices.

### **2.23 Types of Different Examination**

Following different types of final Examinations will be conducted in MIST to evaluate the students of Undergraduate Programs:

- a. Term Final Examination:** At the end of each normal term (after 22week or so), Term Final Examination will be held. Students will appear in the Term Final Examination for all the theory courses they have taken in the Term.
- b. Supplementary Examination:** It will take place twice in a year. Supplementary-I is defined as provision of giving exam in the first week of Spring Term (Jan-Jun)/Fall Term (Jul-Dec) end break and Supplementary-II in the first week of Fall Term (Jul-Dec)/Spring Term (Jan-Jun) end break, respectively. Students will be allowed to register for a maximum of two theory courses (Failed/ Improvement) in Supplementary-I and maximum of one theory course (Failed/ Improvement) in Supplementary-II.
- c. Improvement Examination:** It will be taken during Supplementary-I and Supplementary-II Examination. Questions will be same as the question of the regular examination of that Supplementary Examination (if any). Student can take maximum two subjects at a time (two subjects in Supplementary-I and one subject in Supplementary-II) and maximum 6 subjects in the whole academic duration. If a student obtains a grade lower than 'B+' in a course, he/she will be allowed to repeat the course only once for grade improvement. However, he/she will not be eligible to get a grade better than 'B+' for an improvement course. Among the previous result and improvement examination result, best one will be considered as final result for an individual student. However, performance of all examination i.e. previous to improvement examination shall be reflected in the transcript.

## **2.24 Rules of Different Examinations**

### **2.24.1 Term Final Examination**

Following rules to be followed:

- a. Registration to be completed before commencement of the class. A student has to register his desired courses paying registration, examination fee and other related fees.
- b. Late registration will be allowed without penalty within first one week of the term.
- c. Within 1st two weeks of a term a student can Add/Drop course/courses. To add a course, in the 3rd week, one has to register the course by paying additional fees. To drop a course, one has to apply within three weeks and paid fees will be adjusted/refunded. If anyone wants to drop a course after three weeks and within 4 weeks, that will be permitted but paid fees will not be refunded in that case.
- d. Registrar office will finalize registration of all courses within 7 (seven) weeks, issue registration slip and that will be followed by issuing Admit Card.
- e. Term Final Examination to be conducted in the 18-20th week of the term as per approved Academic Calendar.

### **2.24.2 Supplementary Examination**

Following rules to be followed:

- a. Supplementary-I is defined as provision of giving exam in the first week of Spring Term (Jan-Jun) /Fall Term (Jul-Dec) end break and Supplementary-II in the first week of Fall Term (Jul-Dec) / Spring Term (Jan-Jun) end break, respectively.
- b. Students will be allowed to register for a maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of one theory course (Failed/Improvement) in Supplementary-II.
- c. No class will be conducted.
- d. 40% marks will be considered from the previous exams.
- e. Maximum grading in Supplementary Exam will be 'B+'.
- f. No Sessional Exam will be conducted.

- g. Examination will be taken on 60% marks like Term Final Examination.
- h. If a student fails in a course more than once in regular terms, then for calculating 40% marks, the best one of all continuous assessment marks will be counted.
- i. If anyone fails in the Laboratory/ Sessional course, that course cannot be taken in the supplementary examination.
- j. If any student fails in a course, he can clear the course retaking it second time or, he can clear the examination appearing at the Supplementary Examination as well. Anyone fails twice in a course, can only retake it in the regular term for appearing third time. But anyone fails even after appearing third time, he/she has to take approval of Academic Council of MIST for appearing 4th (last) time in a course and need to pay extra financial penalty. If any student fails even 4th time in a course, will not be allowed to appear anymore in this same course.
- k. Registration of Supplementary-I Exam to be done within 5th week after completion of fall Term (Jul-Dec) and registration of Supplementary-II Exam to be done within the mid-term break of Spring Term (Jan-Jun), paying all the required fees.
- l. There will be no provision for add/drop courses after registration.
- m. **Thesis:** if a student cannot complete thesis in two consecutive terms, with the recommendation of the supervisor, he/she may continue for next one/two term within six academic years.

### **2.24.3 Improvement Examination**

Following rules to be followed:

- a. Improvement Examination is to be taken during the Supplementary-I and II examinations.
- b. For Improvement Examination, registration is to be done during the registration of Supplementary-I and Supplementary-II Examinations by paying all the fees.
- c. Question Setting, Moderation and Result Publication to be done with courses of Supplementary-I and Supplementary-II Examinations.
- d. Any student gets a grading below 'B+' and desires to improve that course, he will be allowed to appear the Improvement Examination for that particular course.
- e. Highest grade of Improvement Examination will be 'B+'.
- f. One student is allowed to appear at Improvement Exam in 6 (six) courses in his

whole graduation period taking maximum two courses at a time (two courses at Supplementary-I and one course at Supplementary-II).

### **2.25 Irregular Graduation**

If any graduating student clears his/her failed course in Term-1 and his graduation requirements are fulfilled, his graduation will be effective from the result publication date of Term-1 and that student will be allowed to apply for provisional certificate.

### **2.26 Minimum Earned Credit and CGPA Requirement for Obtaining Degree**

The requirements for award of engineering degree are as follows:

- a. Completion of the courses for the minimum required credits of 157 (or as specified in a particular department) in a maximum period of six academic years.
- b. Appearing at the final examination in all the required courses as per syllabus of the program.
- c. Scoring a CGPA of 2.2 or above.

### **2.27 Consequences of Failing in Sessional Courses**

Any student failing in any sessional course must re-take that sessional course when offered by the department in any next Regular Term. No Supplementary exam is allowed for sessional course.

### **2.28 Withdrawal for Poor Performance**

A student to remain in reasonable standing must maintain a minimum CGPA of 2.20. Failure to secure/achieve minimum CGPA of 2.20 in two consecutive levels will also lead to withdrawal of the student. A student who fails to maintain a CGPA of 2.20 at the end of a level, but obtains 2.00 or more, will be placed on probation. Failure by a student placed on probation to raise the CGPA to 2.20 in the next level will lead to his withdrawal from the Program. A student failing to maintain a CGPA of 2.20 at the end of the level-4 shall be allowed to repeat courses of the level-4 in which he earned 'C' grades or below. This opportunity will be given only once. Such a student failing to raise CGPA to 2.2 after repeating the courses will be withdrawn from the Program (For further detail 'MIST Withdrawal Policy' may be consulted).

- a. **Voluntary withdrawal for Sickness.** In case of sickness which leads to missing of more than 40% class or miss term final examination (supported by requisite medical documents), students may be allowed to withdraw from that term subject to the approval of the Academic Council of MIST. Students may retain sessional courses of that term if applies and approved by Academic council. 'VW' as grading of each course to be

reflected in concerned tabulation sheet, grade sheet and transcript.

- b. **Class Tests.** The number of class tests shall be  $n$  for 3.0 and above credit courses and  $(n-1)$  shall be considered for grading where  $n$  is the number of credits of the course. However, for courses having credits below 3.0, the considered class tests shall be 2 out of 3. Class test will be conducted by the subject teacher. Duration of class test should not be more than 30 minutes. Course teacher must announce results within 10 days of holding the examination. Checked script will be shown to the students. If a student misses the class test for acceptable reason the course teacher may take the test of the student.
- c. MIST is committed in conferring degrees to the students in time which plays a very vital role in steering all the academic activities in any university/ institute. At the beginning MIST conducted all its examinations under the examination section of the University of Dhaka. In June 2008, MIST got affiliation with BUP. Since then MIST has been conducting all its examinations under the control and authority of BUP. For the need of time, former MIST examination policy was reviewed several times. Present review committee has made necessary amendment/ addition/ deletion to suit the proposed course system. This policy may be reviewed every after 05 (five) years or as and when felt necessary by the authority of MIST.

## 2.29 SUMMARY OF MIST EXAMINATION POLICY-2020

| Serial | Examination Type                    | Session                                       | Number of Theory Courses | Maximum Grading | Assessment Percentage | Examination Schedule   | Courses                                      | Registration Schedule                                  |
|--------|-------------------------------------|---|--------------------------|-----------------|-----------------------|--|--|--|
| 1      | Regular                             | Spring Term (Jan-Jun) and Fall Term (Jul-Dec) | Maximum 6 Theory Courses | A+              | Assessment on 100%    | Regular Examination  | Regular                                      | Regular  |
| 2      | Retake                              | Spring Term (Jan-Jun) and Fall Term (Jul-Dec) |                          | B+              |                       |  |  |  |
| 3      | Supplementary-I (Fail/Improvement)  | Spring Term (Jan-Jun)                         | Maximum 2 Theory         | B+              | Assessment on 60%     | 1 <sup>st</sup> week of Spring Term (Jan-Jun)/ Fall Term (Jul-Dec) End Break | Courses of immediate past terms included     | 5th week after completion of Fall Term (Previous Year) |
| 4      | Supplementary-II (Fail/Improvement) | Fall Term (Jul-Dec)                           | Maximum 1 Theory         | B+              | Assessment on 60%     | 1 <sup>st</sup> week of Fall Term (Jul-Dec)/ Spring Term (Jan-Jun) End Break | Courses of immediate past terms not included | Mid-Term Break of Spring (Jan-Jun) Term (March)        |

1. Maximum 24 credit hour in one regular term (excluding Supplementary Exams).
2. Students may register maximum upto 7 (seven) theory courses in exceptional case, if department can accommodate within 24 credit hour.
3. Students can register maximum 6 (six) theory courses for improvement in his whole academic period.
4. Supplementary-I Exam to be considered as part of previous Academic Year.
5. Student appearing in Supplementary-I shall not be included in current graduation ceremony.

## **CHAPTER 3**

### **DEPARTMENT OF BIOMEDICAL ENGINEERING (BME)**

#### **3.1 Introduction to the Program**

The Department of Biomedical Engineering, MIST, was founded in 2014 and started the academic program of the pioneer batch of Undergraduate Biomedical Engineers in the country. The B.Sc Program commenced on 1<sup>st</sup> February, 2015 with 41 students. The M.Sc Program commenced on 4<sup>th</sup> November 2015 with 5 students. Currently, there are a total of 161 students in the B.Sc Program and a total of 37 students in the M.Sc Program. Biomedical Engineering (BME) is an interdisciplinary field that combines the design and problem-solving skills of engineering with medical and biological sciences to advance healthcare treatment. Deeply interdisciplinary, biomedical engineering applies modern approaches from the experimental life sciences in conjunction with theoretical and computational methods from engineering, mathematics, and computer science to the solution of biomedical problems of fundamental importance, such as human health. This field seeks to close the gap between engineering and medicine, combining the design and problem-solving skills of engineering with medical and biological sciences to advance healthcare treatment, including diagnosis, monitoring, and therapy. The current focus of the BME Department includes the development of biocompatible implants and prostheses, various diagnostic and therapeutic medical devices ranging from clinical equipment, common biomedical imaging equipment, cell & tissue engineering, regenerative tissue growth, pharmaceutical drugs, and therapeutics.

#### **3.2 Vision and Mission of the Program**

##### **Vision:**

To become a locally reputed and globally recognized Biomedical Engineering Department through nurturing excellence in teaching, research, and industrial partnership towards advanced cutting-edge healthcare technologies.

##### **Mission:**

- a. To provide quality education in the emerging and extremely interdisciplinary field of Biomedical Engineering, utilizing up-to-date teaching and learning facilities contributing to advanced healthcare technologies.
- b. To formulate and implement a modern academic curriculum to develop professionally sound and ethically strong Biomedical Engineers to provide dedicated services in the healthcare sector of the nation.

- c. To facilitate innovative and industry-linked research platforms to foster the development of cutting-edge technologies and their proficient applications.
- d. To improve the quality of common peoples' life in Bangladesh using knowledge and skills of modern science and technology.

### **3.3 Program Educational Objective (PEOs)**

| No    | PEO Statement  |
|-------|--|
| PEO-1 | Provide graduates mathematical, scientific, and engineering fundamentals and advanced knowledge of understanding in the sector of Biomedical Engineering including analysis techniques, design, developments, and implementation methodologies |
| PEO-2 | Integrate technical and communicative knowledge with professional and industry-based education to build up successful professional careers in industry, government, and academia   |
| PEO-3 | Expose graduate's problem-solving skills and research-based education for life-long learning to adapt the innovation and changes.  |
| PEO-4 | Make the graduates capable of working in the broader area of technology, having the capability and responsibility of leadership and teamwork.  |
| PEO-5 | Enable the graduates to establish and run sustainable business enterprises along diverse career paths by creating, selecting, applying appropriate and modern technologies and tools.  |
| PEO-6 | Contribute the educational, cultural, social, technological and economic development of society through the ethical application of their knowledge and skills.   |

### **3.4 Program Outcomes**

Based on the suggestion of the Board of Accreditation for Engineering and Technical Education (BAETE), Bangladesh, the Bachelor in Biomedical Engineering (BME) program will have the following learning outcomes:

- 1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. Problem analysis:** Identify, formulate, research the literature and analyze complex engineering problems and reach substantiated conclusions using the first principles of mathematics, the natural sciences, and the engineering sciences.
- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety as well as cultural, societal, and environmental concerns.
- 4. Investigation:** Conduct investigations of complex problems, considering the design of experiments, analysis, and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources and modern engineering and IT tools, including prediction and modeling, to complex engineering activities with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to professional engineering practice.
- 7. Environment and sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate sustainable development knowledge.
- 8. Ethics:** Apply ethical principles and commit to professional ethics, responsibilities, and the norms of the engineering practice.
- 9. Individual work and teamwork:** Function effectively as an individual and as a member or leader of diverse teams as well as in multidisciplinary settings.
- 10. Communication:** Communicate effectively about complex engineering activities with the engineering community and with society at large. Be able to comprehend and write effective reports, design documentation, make effective presentations, and give and receive clear instructions.
- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work as a member or a leader of a team to manage projects in multi-disciplinary environments.

**12. Life-long learning:** Recognize the need for and have the preparation and ability to engage in independent, life-long learning in the broadest context of technological change.

**13.** In addition to incorporating the above-listed POs, MIST also included the following Knowledge Profile (K1-K8) as an educational institution: may include additional outcomes in its learning programs. The ranges of Complex Problem Solving (P1 – P7) and Complex Engineering Activities (A1 – A5) that should be addressed in the program are given in Tables 3.2 and 3.3, respectively.

In addition to incorporating the above-listed POs, MIST also included the following Knowledge Profile (K1-K8) as an educational institution: may include additional outcomes in its learning programs. The ranges of Complex Problem Solving (P1 – P7) and Complex Engineering Activities (A1 – A5) that should be addressed in the program are given in Tables 3.2 and 3.3, respectively.

**Table 3.1: Knowledge Profile (KP)**

| Attribute |  |
|-----------|--|
| K1        | A systematic, theory-based understanding of the natural sciences applicable to the discipline  |
| K2        | Conceptually based mathematics, numerical analysis, statistics and the formal aspects of computer and information science to support analysis and modeling applicable to the discipline  |
| K3        | A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline  |
| K4        | Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline  |
| K5        | Knowledge that supports engineering design in a practice area  |
| K6        | Knowledge of engineering practice (technology) in the practice areas in the engineering discipline   |
| K7        | Comprehension of the role of engineering in society and identified issues in engineering practice in the discipline: ethics and the engineer's professional responsibility to public safety; the impacts of engineering activity; economic, social, cultural, environmental and sustainability |
| K8        | Engagement with selected knowledge in the research literature of the discipline  |

**Table 3.2: Range of Complex Engineering Problem Solving**

| <b>Attribute</b>   | <b>Complex Engineering Problems</b> have characteristic P1 and some or all of P2 to P7:   |
|--|---|
| Depth of knowledge required  | P1: Cannot be resolved without in-depth engineering knowledge at the level of one or more of K3, K4, K5, K6 or K8 which allows a fundamentals-based, first principles analytical approach |
| Range of conflicting requirements                                    | P2: Involve wide-ranging or conflicting technical, engineering and other issues   |
| Depth of analysis required   | P3: Have no obvious solution and require abstract thinking, originality in analysis to formulate suitable models  |
| Familiarity of issues  | P4: Involve infrequently encountered issues   |
| Extent of applicable codes   | P5: Are outside problems encompassed by standards and codes of practice for professional engineering  |
| Extent of stakeholder involvement and conflicting needs requirements | P6: Involve diverse groups of stakeholders with widely varying  |
| Interdependence  | P7: Are high level problems including many component parts or sub-problems  |

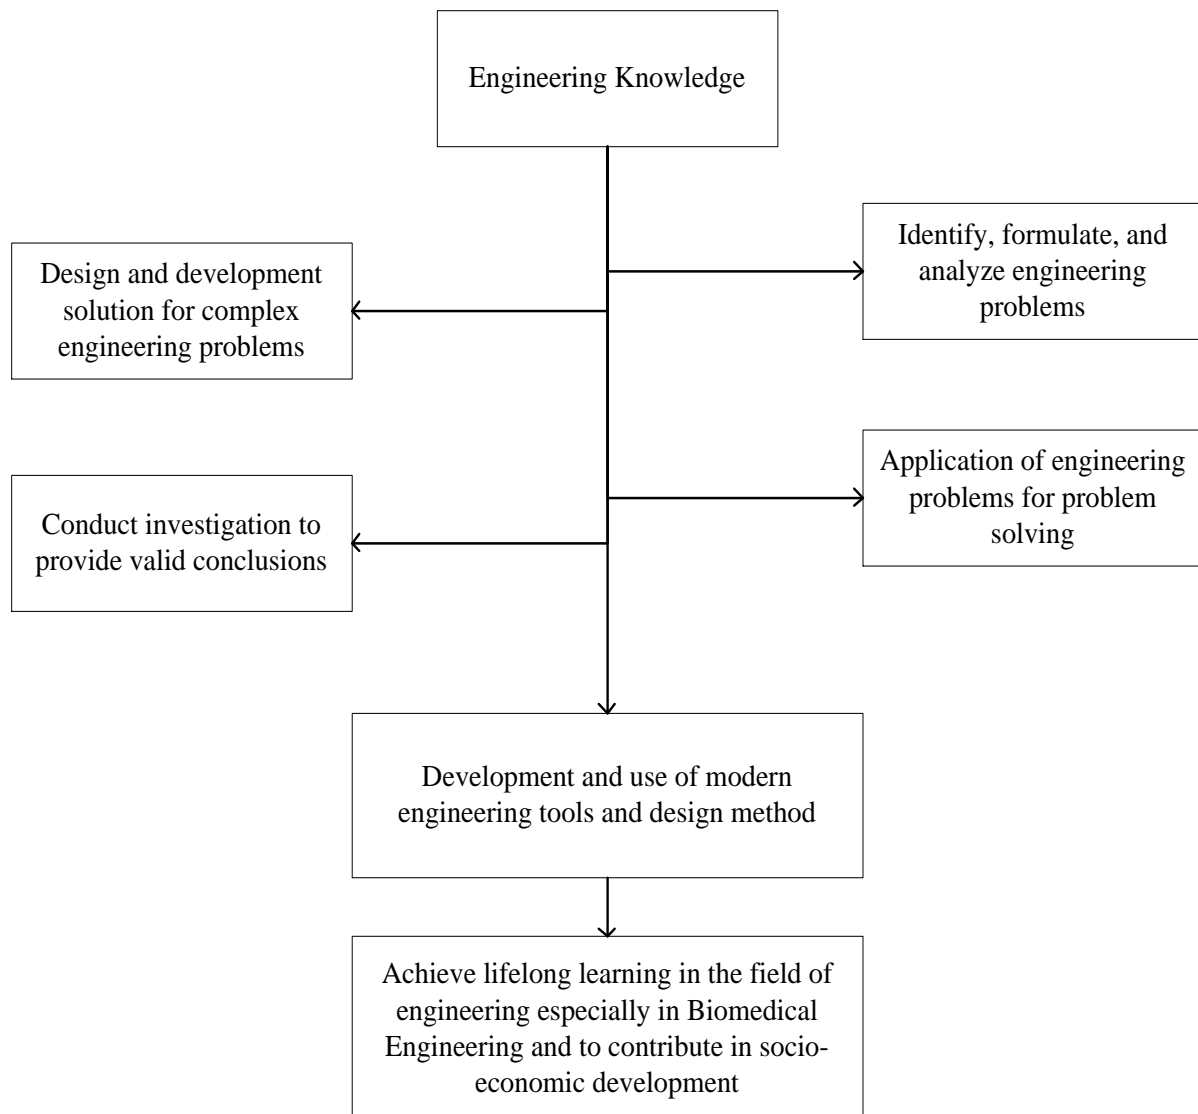

**Table 3.3: Range of Complex Engineering Activities**

| <b>Attribute</b>                             | <b>Complex activities</b> means (engineering) activities or projects that have some or all of the following characteristics:                        |
|--|---|
| Range of resources                           | A1: Involve the use of diverse resources (and for this purpose resources include people, money, equipment, materials, information and technologies) |
| Level of interaction                         | A2: Require resolution of significant problems arising from interactions between wide-ranging or conflicting technical, engineering or other issues |
| Innovation                                   | A3: Involve creative use of engineering principles and research based knowledge in novel ways   |
| Consequences for society and the environment | A4: Have significant consequences in a range of contexts, characterized by difficulty of prediction and mitigation                                  |
| Familiarity                                  | A5: Can extend beyond previous experiences by applying principles-based approaches  |

### **3.5    Generic Skills**

1. Apply the principles and theory of biomedical engineering knowledge to the requirements, design and development of different biomedical equipment and devices with appropriate understanding.
2. Define and use appropriate research methods and modern tools to conduct a specific project.
3. Learn independently, be self- aware, and self- manage their time and workload.
4. Apply critical thinking to solve complex engineering problems
5. Analyze real time problems and justify the appropriate use of technology
6. Work effectively with others and exhibit social responsibility

### 3.6 Curriculum/ Skill Mapping

## CHAPTER 4

### COURSE CURRICULUM FOR BACHELOR DEGREE IN BME

#### 4.1 Course Schedule

Keeping the above mentioned program outcome, the course schedule for the undergraduate students of the Biomedical Engineering (BME) is given below:

| Level/<br>Term          | Basic Science |      | Math  | General<br>Education |      | Engineering Courses |      |           |      | Elective<br>Course | Total  |
|-------------------------|---------------|------|-------|----------------------|------|---------------------|------|-----------|------|--------------------|--------|
|                         |               |      |       |                      |      | Dept.               |      | Non-Dept. |      |                    |        |
|                         | T             | S    | T     | T                    | S    | T                   | S    | T         | S    | T                  |        |
| L-1 T-I                 | 6.00          | 3.00 | 3.00  | -                    | -    | 2.00                | -    | 3.00      | 1.50 | -                  | 18.50  |
| L-1 T-II                | 6.00          | -    | 3.00  | 4.00                 | 1.50 | 3.00                | 1.50 | -         | -    | -                  | 19.00  |
| L-2 T-I                 | -             | -    | 3.00  | 2.00                 | 1.50 | 3.00                | -    | 6.00      | 3.00 | -                  | 18.50  |
| L-2 T-II                | -             | -    | 3.00  | -                    | -    | 9.00                | 4.50 | 3.00      | 1.50 | -                  | 21.00  |
| L-3 T-I                 | -             | -    | -     | 2.00                 | -    | 12.00               | 3.00 | 3.00      | 1.50 | -                  | 21.50  |
| L-3 T-II                | -             | -    | -     | -                    | -    | 12.00               | 7.50 | -         | -    | -                  | 19.50  |
| L-4 T-I                 | -             | -    | -     | 2.00                 | -    | 9.00                | 4.50 | -         | -    | 6.00               | 21.50  |
| L-4 T-II                | -             | -    | -     | 4.00                 | -    | 6.00                | 4.50 | -         | -    | 6.00               | 20.50  |
| % of<br>Total<br>Course | 9.375         |      | 7.50  | 10.625               |      | 50.94               |      | 14.06     |      | 7.50               | 100.00 |
| Total<br>Credit<br>Hr   | 15.00         |      | 12.00 | 17.00                |      | 81.50               |      | 22.50     |      | 12.00              | 160.00 |

T=Theory; S=Sessional

**Table:** Summary of Course Curriculum

**4.2 Contact Hours and Credit Hours Distribution in Eight Terms**

| <b>Level/Term</b> | <b>Theory Contact Hours</b> | <b>Sessional Contact Hours</b> | <b>Theory Credit Hours</b> | <b>Sessional Credit Hours</b> | <b>Total Contact Hours</b> | <b>Total Credit Hours</b> |
|-------------------|-----------------------------|--------------------------------|----------------------------|-------------------------------|----------------------------|---------------------------|
| L-1 T-I           | 14.00                       | 9.00                           | 14.00                      | 4.50                          | 23.00                      | 18.50                     |
| L-1 T-II          | 16.00                       | 6.00                           | 16.00                      | 3.00                          | 22.00                      | 19.00                     |
| L-2 T-I           | 14.00                       | 9.00                           | 14.00                      | 4.50                          | 23.00                      | 18.50                     |

**4.3 Final Year****Final Year Design and Research Project**

Final year design and research project will have to be undertaken by students under separate supervisors in partial fulfillment of the requirement of his/her degree. Credits allotted to the final year design and research project will be 6.00 corresponding to 12.00 contact hours. Topic and advisor selection of final year design and research project must be finalized within level-3, term-2.

#### 4.4 **BME Courses**

The students have to complete all the core courses listed below:

##### 4.4.1 **List of Core Courses – BME**

| Ser | Course Code | Course Name   | Credit Hour |
|-----|-------------|---|-------------|
| 1   | BME 101     | Introduction to Biomedical Engineering                | 2.0         |
| 2   | BME 104     | CAD in Biomedical Engineering Sessional               | 1.5         |
| 3   | BME 105     | Human Anatomy   | 3.0         |
| 4   | BME 201     | Human Physiology                                      | 3.0         |
| 5   | BME 203     | Biochemistry  | 3.0         |
| 6   | BME 204     | Biochemistry Sessional                                | 1.5         |
| 7   | BME 205     | Biofluid Mechanics and Heat Transfer                  | 3.0         |
| 8   | BME 206     | Biofluid Mechanics and Heat Transfer Sessional        | 1.5         |
| 9   | BME 207     | Biomedical Instrumentation and Measurements           | 3.0         |
| 10  | BME 208     | Biomedical Instrumentation and Measurements Sessional | 1.5         |
| 11  | BME 301     | Statistics and Numerical Methods for Engineers        | 3.0         |
| 12  | BME 303     | Biomaterials  | 3.0         |
| 13  | BME 304     | Biomaterials Sessional                                | 1.5         |
| 14  | BME 305     | Biomedical Signal Processing                          | 3.0         |
| 15  | BME 306     | Biomedical Signal Processing Sessional                | 1.5         |
| 16  | BME 307     | Medical Imaging                                       | 3.0         |
| 17  | BME 309     | Diagnostic and Therapeutic Equipment-I                | 3.0         |
| 18  | BME 311     | Embedded Systems and Interfacing Sessional            | 1.5         |
| 19  | BME 312     | Embedded Systems and Interfacing                      | 3.0         |
| 20  | BME 313     | Biomedical Image Processing                           | 1.5         |
| 21  | BME 314     | Biomedical Image Processing Sessional                 | 3.0         |
| 22  | BME 315     | Biomechanics  | 3.0         |

|              |         |   |             |
|--------------|---------|---|-------------|
| 23           | BME 316 | Biomechanics Sessional                    | 1.5         |
| 24           | BME 318 | Biomedical Engineering Design Sessional   | 1.5         |
| 25           | BME 300 | Industrial Training                       | 1.5         |
| 26           | BME 401 | Diagnostic and Therapeutic Equipment-II   | 3.0         |
| 27           | BME 403 | Biomedical Transport Phenomenon           | 3.0         |
| 28           | BME 405 | Molecular Biology for Engineers           | 3.0         |
| 29           | BME 406 | Molecular Biology for Engineers Sessional | 1.5         |
| 30           | BME 407 | Healthcare Technology Management          | 3.0         |
| 31           | BME 409 | Rehabilitation Engineering                | 3.0         |
| 32           | BME 410 | Rehabilitation Engineering Sessional      | 1.5         |
| 33           | BME 400 | Final Year Design and Research Project    | 6.0         |
| <b>Total</b> |         |   | <b>81.5</b> |

#### 4.4.2 List of Courses – Basic Science and Mathematics

| Ser          | Course Code | Course Name  | Credit Hour |
|--------------|-------------|--|-------------|
| 1            | PHY 101     | Waves and Oscillations, Optics and Modern physics              | 3.0         |
| 2            | PHY 102     | Physics Sessional  | 1.5         |
| 3            | PHY 109     | Structure of matter, Electricity, Magnetism, and Mechanics     | 3.0         |
| 4            | CHEM 101    | Fundamentals of Chemistry                                      | 3.0         |
| 5            | CHEM 102    | Chemistry Sessional  | 1.5         |
| 6            | CHEM 125    | Physical and Bio-organic Chemistry                             | 3.0         |
| 7            | MATH 101    | Differential and Integral Calculus                             | 3.0         |
| 8            | MATH 105    | Vector Analysis, Matrix and Coordinate Geometry                | 3.0         |
| 9            | MATH 205    | Differential Equation, Laplace transform and Fourier Transform | 3.0         |
| 10           | MATH 231    | Complex Variables and Linear Algebra                           | 3.0         |
| <b>Total</b> |             |  | <b>27.0</b> |

#### 4.4.3 List of Courses – General Education or Non-Skill and Language/Communicative Language

| Ser          | Course Code | Course Name                                      | Credit Hour |
|--------------|-------------|--|-------------|
| 1            | LANG 102    | Communicative English I                          | 1.5         |
| 2            | GES 101     | Fundamentals of Sociology                        | 2.0         |
| 3            | GEBS 101    | Bangladesh Studies                               | 2.0         |
| 4            | GELM 271    | Leadership and Management                        | 2.0         |
| 5            | LANG 202    | Communicative English II                         | 1.5         |
| 6            | GERM 352    | Fundamentals of Research Methodology (Sessional) | 2.0         |
| 7            | GEPM 481    | Project Management and Finance                   | 2.0         |
| 8            | GESL 421    | Environment, Sustainability and Law              | 2.0         |
| 9            | GEEM 451    | Engineering Ethics and Moral Philosophy          | 2.0         |
| <b>Total</b> |             |  | <b>17.0</b> |

#### 4.4.4 List of Core Courses – Interdisciplinary

| Ser          | Course Code | Course Name                                    | Credit Hour |
|--------------|-------------|--|-------------|
| 1            | EECE 191    | Principles of Electrical Engineering           | 3.0         |
| 2            | EECE 192    | Principles of Electrical Engineering Sessional | 1.5         |
| 3            | EECE 291    | Electronic Circuits and Devices                | 3.0         |
| 4            | EECE 292    | Electronic Circuits and Devices Sessional      | 1.5         |
| 5            | EECE 391    | Digital Electronics                            | 3.0         |
| 6            | EECE 392    | Digital Electronics Sessional                  | 1.5         |
| 7            | ME 291      | Principles of Mechanical Engineering           | 3.0         |
| 8            | ME 292      | Mechanical Engineering Lab                     | 1.5         |
| 9            | CSE 291     | Computer Programming                           | 3.0         |
| 10           | CSE 292     | Computer Programming Sessional                 | 1.5         |
| <b>Total</b> |             |  | <b>22.5</b> |

#### **4.4.5 BME Elective Courses**

At least TWO elective courses must be taken from each group.

##### **4.4.5.1 Group-I (Instrumentation)**

| <b>Ser.</b> | <b>Course Code</b> | <b>Course Name</b>                      | <b>Credit Hour</b> |
|-------------|--------------------|---|--------------------|
| 1.          | BME 411            | Physiological Control System            | 3.0                |
| 2.          | BME 413            | Virtual Bioinstrumentation              | 3.0                |
| 3.          | BME 415            | Biophotonics                            | 3.0                |
| 4.          | BME 417            | Equipment in Radiology and Radiotherapy | 3.0                |

##### **4.4.5.2 Group-II (Regenerative Medicine)**

| <b>Ser.</b> | <b>Course Code</b> | <b>Course Name</b>                   | <b>Credit Hour</b> |
|-------------|--------------------|--------------------------------------|--------------------|
| 1.          | BME 419            | Tissue Engineering                   | 3.0                |
| 2.          | BME 421            | Drug Development and Delivery System | 3.0                |
| 3.          | BME 423            | Nanotechnology in Biomedicine        | 3.0                |
| 4.          | BME 425            | Artificial Organ Development         | 3.0                |

##### **4.4.5.3 Group-III (Imaging)**

| <b>Ser.</b> | <b>Course Code</b> | <b>Course Name</b>                    | <b>Credit Hour</b> |
|-------------|--------------------|---------------------------------------|--------------------|
| 1.          | BME 427            | Advanced Biomedical Signal Processing | 3.0                |
| 2.          | BME 429            | Nuclear Medicine                      | 3.0                |
| 3.          | BME 431            | Bioinformatics                        | 3.0                |
| 4.          | BME 433            | Biomedical Data Science               | 3.0                |

##### **4.4.5.4 Group-IV (Biomechanics and Rehabilitation Engineering)**

| <b>Ser.</b> | <b>Course Code</b> | <b>Course Name</b>                  | <b>Credit Hour</b> |
|-------------|--------------------|-------------------------------------|--------------------|
| 1.          | BME 435            | Advanced Biofluid Mechanics         | 3.0                |
| 2.          | BME 437            | Biomedical Implants and Braces      | 3.0                |
| 3.          | BME 439            | Neuroscience and Neural Engineering | 3.0                |
| 4.          | BME 441            | Biofabrication                      | 3.0                |

## 4.5 Term-wise Distribution of Courses

### 4.5.1 LEVEL 1, TERM-I

| Ser          | Course Code | Course Name                                       | Contact Hour | Credit Hour |
|--------------|-------------|---|--------------|-------------|
| 1.           | BME 101     | Introduction to Biomedical Engineering            | 2.0          | 2.0         |
| 2.           | PHY 101     | Waves and Oscillations, Optics and Modern physics | 3.0          | 3.0         |
| 3.           | PHY 102     | Physics Sessional                                 | 3.0          | 1.5         |
| 4.           | CHEM 101    | Fundamentals of Chemistry                         | 3.0          | 3.0         |
| 5.           | CHEM 102    | Chemistry Sessional                               | 3.0          | 1.5         |
| 6.           | MATH 101    | Differential and Integral Calculus                | 3.0          | 3.0         |
| 7.           | EECE 191    | Principles of Electrical Engineering              | 3.0          | 3.0         |
| 8.           | EECE 192    | Principles of Electrical Engineering Sessional    | 3.0          | 1.5         |
| <b>Total</b> |             |   | <b>23.0</b>  | <b>18.5</b> |

### 4.5.2 LEVEL 1, TERM-II

| Ser          | Course Code | Course Name   | Contact Hour | Credit Hour |
|--------------|-------------|---|--------------|-------------|
| 1.           | BME 104     | CAD in Biomedical Engineering Sessional                       | 3.0          | 1.5         |
| 2.           | BME 105     | Human Anatomy   | 3.0          | 3.0         |
| 3.           | PHY 109     | Structure of matter, Electricity and Magnetism, and Mechanics | 3.0          | 3.0         |
| 4.           | CHEM 125    | Physical and Bio-organic Chemistry                            | 3.0          | 3.0         |

**4.5.9 List of Elective Courses**

At least TWO elective courses must be taken from each group.

**Group-I (Instrumentation)**

| Ser. | Course Code | Course Name                             | Credit Hour |
|------|-------------|---|-------------|
| 1.   | BME 411     | Physiological Control System            | 3.0         |
| 2.   | BME 413     | Virtual Bioinstrumentation              | 3.0         |
| 3.   | BME 415     | Biophotonics                            | 3.0         |
| 4.   | BME 417     | Equipment in Radiology and Radiotherapy | 3.0         |

**Group-II (Regenerative Medicine)**

| Ser. | Course Code | Course Name                          | Credit Hour |
|------|-------------|--------------------------------------|-------------|
| 1.   | BME 419     | Tissue Engineering                   | 3.0         |
| 2.   | BME 421     | Drug Development and Delivery System | 3.0         |
| 3.   | BME 423     | Nanotechnology in Biomedicine        | 3.0         |
| 4.   | BME 425     | Artificial Organ Development         | 3.0         |

**Group-III (Imaging)**

| Ser. | Course Code | Course Name                           | Credit Hour |
|------|-------------|---------------------------------------|-------------|
| 1.   | BME 427     | Advanced Biomedical Signal Processing | 3.0         |
| 2.   | BME 429     | Nuclear Medicine                      | 3.0         |
| 3.   | BME 431     | Biomedical Data Science               | 3.0         |
| 4.   | BME 433     | Bioinformatics                        | 3.0         |

**Group-IV (Biomechanics and Rehabilitation Engineering)**

| Ser. | Course Code | Course Name                         | Credit Hour |
|------|-------------|-------------------------------------|-------------|
| 1.   | BME 435     | Advanced Biofluid Mechanics         | 3.0         |
| 2.   | BME 437     | Biomedical Implants and Braces      | 3.0         |
| 3.   | BME 439     | Neuroscience and Neural Engineering | 3.0         |
| 4.   | BME 441     | Biofabrication                      | 3.0         |

## CHAPTER 5

### COURSES OFFERED BY OTHER DEPARTMENTS

#### 5.1 Department of Science and Humanities

##### 5.1.1 Level-1, Term-1

##### 5.1.1.1 PHY 101 Waves and Oscillations, Optics and Modern Physics

| COURSE INFORMATION  |  |                       |        |    |    |    |                    |
|---|--|-----------------------|--------|----|----|----|--------------------|
| Course Code   | : PHY 101  | Lecture Contact Hours | : 3.00 |    |    |    |                    |
| Course Title  | :Waves and Oscillations, Optics and Modern Physics   | Credit Hours          | : 3.00 |    |    |    |                    |
| PRE-REQUISITE   |  |                       |        |    |    |    |                    |
| None  |  |                       |        |    |    |    |                    |
| CURRICULUM STRUCTURE  |  |                       |        |    |    |    |                    |
| Outcome-Based Education (OBE)   |  |                       |        |    |    |    |                    |
| SYNOPSIS/RATIONALE  |  |                       |        |    |    |    |                    |
| To learn the basic concepts of Waves and Oscillations, Optics and Modern physics  |  |                       |        |    |    |    |                    |
| OBJECTIVE   |  |                       |        |    |    |    |                    |
| 1. To define the different parameters and concepts of Waves and Oscillations, Optics and Modern physics.  |  |                       |        |    |    |    |                    |
| 2. To explain the basic concepts of Waves and Oscillations, Optics and Modern physics.  |  |                       |        |    |    |    |                    |
| 3. To solve analytical problems regarding Waves and Oscillations, Optics and Modern physics.  |  |                       |        |    |    |    |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |  |                       |        |    |    |    |                    |
| No.   | Course Outcome   | Bloom's Taxonomy      | PO     | CP | CA | KP | Assessment Methods |
| CO1   | Be able to <b>Define</b> the different parameters such as periodic motion, simple harmonic motion, undamped oscillations, interference, diffraction, polarization and prism, photoelectric effect, Compton effect, matter wave, atomic model, radioactive decay, fusion, fission etc.  | C1                    | 1      | -  | -  | 1  | MID, T, F          |
| CO2   | Be capable to <b>Explain</b> the wave motion for different systems along with energy, the techniques to derive different formulae for interference, diffraction, polarization and prism, different theory regarding modern physics such as special theory of relativity, Compton theory, materials according to magnetic properties, nuclear transformation, and nuclear reaction etc. | C1, C2                | 1      | -  | -  | 1  | MID, F             |
| CO3   | Be skilled to <b>Solve</b> quantitative problems in the field of Waves and Oscillations, Optics and Modern physics such as energy of wave motion, wavelength, diffraction pattern, relativistic energy, photon energy, Compton shift, nuclear binding energy etc.  | C2                    | 1      | -  | -  | 2  | MID, T, F          |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile,T – Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam) |  |                       |        |    |    |    |                    |

**COURSE SCHEDULE**

| Week           | Content  | Assessment                       |
|----------------|--|----------------------------------|
| <b>Week-1</b>  | <b>Topic</b>   | <b>CT – 1 and Midterm, Final</b> |
| Class-1        | Introductory class: Brief discussion on total syllabus, basic requirements of the course, assessment of the course |                                  |
| Class-2        | Simple harmonic motion (SHM) and its differential equations, graphical representation of SHM                       |                                  |
| Class-3        | Average K.E and total energy   |                                  |
| <b>Week-2</b>  |  |                                  |
| Class-4        | Spring-mass system , electric oscillatory circuit  |                                  |
| Class-5        | Simple, compound and torsional pendulum  |                                  |
| Class-6        | Combination of two SHM   |                                  |
| <b>Week-3</b>  |  |                                  |
| Class-7        | Combination of two SHM   | <b>Midterm, Final</b>            |
| Class-8        | Two body oscillations, reduced mass  |                                  |
| Class-9        | Damped oscillations and its differential equation  |                                  |
| <b>Week-4</b>  |  |                                  |
| Class-10       | Displacement equation of damped oscillation, electric damped oscillatory circuit                                   |                                  |
| Class-11       | Forced oscillation and its differential equation   |                                  |
| Class-12       | Displacement equation of forced oscillation, resonance   |                                  |
| <b>Week-5</b>  |  |                                  |
| Class-13       | Plane progressive wave, energy density of wave   |                                  |
| Class-14       | Stationary wave  |                                  |
| Class-15       | Lens and combination of lenses, power of lens  |                                  |
| <b>Week-6</b>  |  |                                  |
| Class-16       | defects of images and different aberrations  |                                  |
| Class-17       | defects of images and different aberrations  |                                  |
| Class-18       | Interference of light, young’s double slit expeiment   |                                  |
| <b>Week-7</b>  |  |                                  |
| Class-19       | Interference in Thin films, Newton’s ring  |                                  |
| Class-20       | Diffraction : Fresnel & Fraunhofer diffraction   |                                  |
| Class-21       | Diffraction by single slit   |                                  |
| <b>MIDTERM</b> |  |                                  |
| <b>Week-8</b>  |  |                                  |
| Class-22       | Diffraction by double slit, Diffraction gratings   |                                  |
| Class-23       | Polarization and Production and analysis of polarized light  |                                  |
| Class-24       | Optics of crystals, Nicole prism   |                                  |
| <b>Week-9</b>  |  |                                  |

|                |  |                      |
|----------------|--|----------------------|
| Class-25       | Brewster's and Malus law   | <b>CT – 2, FINAL</b> |
| Class-26       | Optical activity and polarimeter   |                      |
| Class-27       | Laser & its applications   |                      |
| <b>Week-10</b> |  |                      |
| Class-28       | Theory of relativity: Frame of Reference, Postulates of special relativity, Galilean Transformation  |                      |
| Class-29       | Theory of relativity: Lorentz Transformations, Length Contraction and Time dilation  |                      |
| Class-30       | Velocity addition, Relativistic mass: Concept of relativistic mass and its expression  |                      |
| <b>Week-11</b> |  | <b>CT – 3, FINAL</b> |
| Class-31       | Theory of relativity: Mass and Energy equivalence equation and concept of Massless particle and its expression. Related numerical problems |                      |
| Class-32       | Photoelectric Effect, photocurrent and work function, kinetic energy, stopping potential   |                      |
| Class-33       | photoelectric equation, characteristics of photoelectric effect  |                      |
| <b>Week-12</b> |  |                      |
| Class-34       | Compton effect: Definition, Compton wavelength shift, limitation   |                      |
| Class-35       | De Broglie Concept, Condition for wave and particle behavior, Bohr atomic model  |                      |
| Class-36       | Expression for Bohr radii and orbital energy for hydrogen atom   | <b>FINAL</b>         |
| <b>Week-13</b> |  |                      |
| Class-37       | Classification of Nucleus, nuclear binding energy  |                      |
| Class-38       | Radioactivity and its transformation, Radioactive Decay Law, half- life, Mean life, nuclear reaction                                       |                      |
| Class-39       |  |                      |
| <b>Week-14</b> |  |                      |
| Class-40       | Concept of Fusion, Fission and nuclear chain reaction  |                      |
| Class-41       | General idea on nuclear reactor and nuclear power plant  |                      |
| Class-42       | Follow up of the course  |                      |

**TEACHING METHODOLOGY**

Lecture and Discussion, Co-operative and Collaborative Method, Problem Based Method

**COURSE SCHEDULE**

| Week | Topics  |
|------|---|
| 1    | Introductory class: Brief discussion on total syllabus, basic requirements of the course, evaluation system of the course, grouping, visit different section of the laboratory, introduction to different basic equipment's |
| 2    | Determination of specific resistance of materials of a wire by using Meter Bridge / Determination of focal length of a concave lens by auxiliary lens method.   |
| 3    | Determination of a high resistance by the method of deflection/ Determination of specific heat of a liquid by the method of cooling   |
| 4    | Determination of ECE of copper by using copper voltameter / Determination of the Young's modulus of bar by bending method,  |
| 5    | Determination of the wavelength of light by using diffraction grating   |
| 6    | Determination of the focal length of a plano-convex lens by Newton's ring method  |
| 7    | Determination of the specific rotation of sugar by poralimeter  |
| 8    | Determination of the conductivity of a bad conductor by Lee's method / Verification of the law of conservation of linear momentum   |
| 9    | Determination of the acceleration due to gravity by means of compound pendulum  |
| 10   | Determination of the spring constant and the rigidity modulus of a spiral spring  |
| 11   | Determination of the Planck's constant using photoelectric effect   |
| 12   | Viva & experimental exam  |
| 13   | Viva & experimental exam  |
| 14   | Quiz  |

| COURSE SCHEDULE |  |          |
|-----------------|--|----------|
|                 |  |          |
| <b>Week 1</b>   |  | CT 1     |
| Class 1         | Introduction to Differential Calculus for Engineering study, Limit of a function and its properties.   |          |
| Class 2         | Basic limit theorems with proofs, Limit of infinity and infinite limit, Sandwich (Squeezing) theorem with problems.  |          |
| Class 3         | Concept of Differentiation, definition, classification of discontinuity and solving problems   |          |
| <b>Week 2</b>   |  |          |
| Class 4         | Basic concept of Differentiability, definition, derivative of a function, differentiable function.   |          |
| Class 5         | Differentiability – one sided derivatives (R.H.D and L.H.D), solving problems  |          |
| Class 6         | Successive differentiation – Concept and problem solving   |          |
| <b>Week 3</b>   |  |          |
| Class 7         | Leibnitz's theorem and its applications  |          |
| Class 8         | Determination of $(y_n)_0$   |          |
| Class 9         | Mean Value theorem, Taylor theorem   |          |
| <b>Week 4</b>   |  | CT 2     |
| Class 10        | Expansion of finite and infinite forms, Lagrange's and Cauchy's form of remainder.   |          |
| Class 11        | Indeterminate forms – concept and problem solving,   |          |
| Class 12        | L'Hospital's rules with application  |          |
| <b>Week 5</b>   |  |          |
| Class 13        | Partial differentiation - partial derivatives of a function of two variables and problems  |          |
| Class 14        | Partial differentiation - partial derivatives of a homogeneous function of two variables, Euler's theorem for two variables and problems   |          |
| Class 15        | Partial differentiation - partial derivatives of a homogeneous function of several variables, Euler's theorem for several (three and m) variables and problem solving  |          |
| <b>Week 6</b>   |  |          |
| Class 16        | Tangents and Normals – Tangents and Normals in Cartesian, equation of tangent at the origin, equation of normal of functions of explicit and implicit forms, Angle between two intersection of two curves; problem solving |          |
| Class 17        | Tangents and Normals – Tangents and Normals in polar, Angle between two intersection of two curves; problem solving  |          |
| Class 18        | Tangents and Normals – Subtangent and subnormals in Cartesian and polar coordinate; problem solving  |          |
| <b>Week 7</b>   |  |          |
| Class 19        | maxima and minima of functions of single variables – concept, Increasing and decreasing function, Concave up and down with problems  |          |
| Class 20        | Curvature  |          |
| Class 21        | Asymptotes   | Mid Term |
| <b>Week 8</b>   |  |          |
| Class 22        | Introduction to integral calculus  |          |

|                     |  |      |
|---------------------|--|------|
| Class 23            | Standard integrals – concept of definite and indefinite integrals, applications.                           |      |
| Class 24            | Indefinite integrals – Method of substitution, Techniques of integration                                   |      |
| Week 9              |  |      |
| Class 25            | Indefinite integrals – Integration by parts, Special types of integration, integration by partial fraction |      |
| Class 26            | Integration by the method of successive reduction  |      |
| Class 27            | Definite integrals – definite integrals with properties and problems                                       |      |
| Week 10             |  | CT 4 |
| Class 28            | Definite integrals – Reduction formula, Walli’s formula  |      |
| Class 29            | Definite integrals – definite integral as the limit of the sum   |      |
| Class 30            | Beta function – concept and problem solving  |      |
| Week 11             |  |      |
| Class 31            | Gamma function - concept and problem solving   |      |
| Class 32            | Relation between beta and gamma function, Legendre duplication formula, problems and applications          |      |
| Class 33            | Multiple integrals – double integrals  |      |
| Week 12             |  |      |
| Class 34            | Multiple integrals – triple integrals  |      |
| Class 35            | Multiple integrals – successive integration for two and three variables                                    |      |
| Class 36            | Area in Cartesian  |      |
| Week 13             |  |      |
| Class 37            | Area in polar  |      |
| Class 38            | Volume of solid revolution   |      |
| Class 39            | Area under a plain curve in Cartesian and polar coordinates  |      |
| Week 14             |  |      |
| Class 40            | Area of a region enclosed by two curves in Cartesian and polar coordinates                                 |      |
| Class 41            | Arc lengths of curves in Cartesian coordinates   |      |
| Class 42            | Arc lengths of curves in polar coordinates   |      |
|                     |  |      |
|                     |  |      |
| ASSESSMENT STRATEGY |  |      |

| PRE-REQUISITE  |  |                             |                       |    |        |     |                       |
| None   |  |                             |                       |    |        |     |                       |
| CURRICULUM STRUCTURE   |  |                             |                       |    |        |     |                       |
| Outcome Based Education (OBE)  |  |                             |                       |    |        |     |                       |
| SYNOPSIS/RATIONALE   |  |                             |                       |    |        |     |                       |
| To learn the basic concepts of inorganic, organic and physical chemistry   |  |                             |                       |    |        |     |                       |
| OBJECTIVE  |  |                             |                       |    |        |     |                       |
| 1. To define the different parameter and concepts of inorganic chemistry.<br>2. To apply different chemical theory to evaluate structure of molecules.<br>3. To explain the basic concepts of physical chemistry.<br>4. To describe basic reaction mechanism of selective organic reactions. |  |                             |                       |    |        |     |                       |
| COURSE OUTCOMES AND GENERIC SKILLS   |  |                             |                       |    |        |     |                       |
| No.  | Course Outcomes  | Corresponding PO            | Bloom's Taxonomy      | CP | CA     | KP  | Assessment Methods    |
| CO1  | Be able to <b>define</b> the different parameter and concepts regarding atomic structure, periodic table, chemical bonding, acids and bases. | 1                           | C1                    |    |        | 1   | T, F                  |
| CO2  | Be able to <b>apply</b> different theory on chemical bonding and hybridization to <b>evaluate</b> structure of molecules.                    | 1                           | C3, C5                |    |        | 1,2 | T, F, ASG             |
| CO3  | Be able to classify hydrocarbons and <b>explain</b> the mechanism of selective organic reactions.  | 1                           | C2                    |    |        | 1,2 | T, F, ASG             |
| CO4  | <b>Explain</b> chemical equilibrium, thermo-chemistry, chemical and ionic equilibria, electro-chemical                                       | 1                           | C2                    |    |        | 1,2 | ASG ,Mid Term Exam, F |

(CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T – Test ; PR – Project ; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)

### COURSE CONTENT

**Atomic Structure:** Concepts of atomic structure, Different atom models, Quantum theory and electronic configurations, Heisenberg's uncertainty principle

**Periodic Table:** Periodic classification of elements, Periodic properties of elements, Properties and uses of noble gases

**Chemical Bonding:** Types and properties, Lewis theory, VBT, MOT, Hybridization and shapes of molecules

**Basic Concepts of Organic Chemistry:** History, Physical and chemical properties, Classification

**Hydrocarbon:** Chemistry of hydrocarbon, Nomenclature, Properties

**Selective Organic Reactions:** Oxidation-reduction, Substitution, Addition, Polymerization, Alkylation reactions

**Acids-Bases/Buffer Solution:** Different concepts of acids-bases, Buffer solution, Mechanism of buffer solution, Henderson-Hasselbalch equation, Water chemistry and pH of water

**Solutions:** Solutions and their classification, Unit expressing concentration, Colligative properties and dilute solutions, Raoult's law, Van't Hoff's law of osmotic pressure

**Thermochemistry:** Laws of thermochemistry, Enthalpy, Heat of reaction, Heat of formation, Heat of neutralization, Kirchhoff's equations, Hess's law

**Electrochemistry:** Conductors and nonconductors, Difference between electrolytic and metallic conduction, Electrolytic conductance, Factors influencing the conductivity of electrolytes, Kohlrausch Law and conductometric titrations

**Chemical Equilibria:** Equilibrium law/constant,  $K_p$  and  $K_c$ , Homogeneous and heterogeneous equilibrium, Van't Hoff's reaction isotherm, Le Chatelier's principle

**Phase Rule:** Basic terms and phase rule derivation, Phase diagram of water and carbon dioxide

**Chemical Kinetics:** Order and rate of reaction, Pseudo and zero order reaction, Half-life, Determination and factors affecting the rate of a reaction, First order reaction, Second order reaction, Collision theory, Transition state theory

### CO-PO MAPPING

| No. | Course Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>define</b> the different parameter and concepts regarding atomic structure, periodic table, chemical bonding, acids and bases. | 1                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>apply</b> different theory on chemical bonding and hybridization to evaluate structure of molecules.                           | 2                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>classify</b> hydrocarbon and <b>explain</b> the mechanism of selective organic reactions.                                      | 2                     |   |   |   |   |   |   |   |   |    |    |    |
| CO4 | <b>Explain</b> chemical equilibrium, thermo-chemistry, chemical and ionic equilibria, electro-chemical cells.                                | 2                     |   |   |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium and 1 as low level of matching)

| TEACHING LEARNING STRATIGY  |  |                    |
|---|--|--------------------|
| Teaching and Learning Activities  |  | Engagement (hours) |
| Face-to-Face Learning   |  | 42                 |

| Total   |  | 131                |
| TEACHING METHODOLOGY  |  |                    |
| Lecture and Discussion, Co-operative and Collaborative Method, Problem Based Method |  |                    |
| COURSE SCHEDULE   |  |                    |
| Week 1  | Atomic Structure   | CT                 |
| Class 1   | Concepts of atomic structure, Different atom models  | CT-1               |
| Class 2   | Concepts of atomic structure, Different atom models  |                    |
| Class 3   | Quantum numbers, Electronic configuration  |                    |
| Week 2  | Atomic Structure/Periodic Table  |                    |
| Class 4   | Hydrogen spectral lines, Heisenberg's uncertainty principle                                    |                    |
| Class 5   | Classification of elements according to electronic configurations                              |                    |
| Class 6   | Periodic classification of elements  |                    |
| Week 3  | Periodic Table/Chemical Bonding  |                    |
| Class 7   | Periodic properties of elements, Properties and uses of noble gases                            |                    |
| Class 8   | Alkali metals: Chemical properties and uses  | CT-2               |
| Class 9   | Chemical bonding (types, properties, Lewis theory, VBT)  |                    |
| Week 4  | Chemical Bonding   |                    |
| Class 10  | Molecular orbital theory (MOT)   |                    |
| Class 11  | Molecular orbital theory (MOT)   |                    |
| Class 12  | Hybridization and shapes of molecules  |                    |
| Week 5  | Chemical Bonding/Organic Chemistry   |                    |
| Class 13  | Hybridization and shapes of molecules  |                    |
| Class 14  | Hybridization and shapes of molecules  |                    |
| Class 15  | Basic concepts of organic chemistry: History, Physical and chemical properties, Classification | CT-3/Mid Term      |
| Week 6  | Organic Chemistry  |                    |
| Class 16  | Chemistry of hydrocarbon, Nomenclature, Properties   |                    |
| Class 17  | Selective organic reactions: Oxidation-reduction, Substitution                                 |                    |
| Class 18  | Selective organic reactions: Addition, Polymerization, Alkylation                              |                    |
| Week 7  | Acids-Bases  |                    |
| Class 19  | Different concepts of acids-bases  |                    |
| Class 20  | Buffer solution, Mechanism of buffer solution  |                    |
| Class 21  | Henderson-Hasselbalch equation   |                    |

|                |  |             |
|----------------|--|-------------|
| <b>Week 8</b>  | <b>Acids-Bases/Solutions</b>   |             |
| Class 22       | Water chemistry and pH of water  |             |
| Class 23       | Solutions and their classification, Unit expressing concentration  |             |
| Class 24       | Effect of temperature and pressure on solubility, Validity and limitations of Henry's law  |             |
| <b>Week 9</b>  | <b>Solutions/Thermochemistry</b>   |             |
| Class 25       | Colligative properties and dilute solutions, Raoult's law, deviation from Raoult's law, Elevation of boiling point                     |             |
| Class 26       | Freezing point depression, Van't Hoff's law of osmotic pressure  |             |
| Class 27       | Laws of thermochemistry, Enthalpy  |             |
| <b>Week 10</b> | <b>Thermochemistry/Electrochemistry</b>  |             |
| Class 28       | Heat of reaction, Heat of formation, Heat of neutralization  |             |
| Class 29       | Hess's law, Kirchoff's equations   | <b>CT-4</b> |
| Class 30       | Electrolytic conduction and its mechanism  |             |
| <b>Week 11</b> | <b>Electrochemistry</b>  |             |
| Class 31       | Faraday's law, Kohlrausch Law, Debye-Huckel-Onsagar theory   |             |
| Class 32       | Conductometric titrations  |             |
| Class 33       | Different types of cells   |             |
| <b>Week 12</b> | <b>Chemical Equilibrium</b>  |             |
| Class 34       | Reversible reactions, Characteristics of chemical equilibrium, Law of mass action, Equilibrium constant, Units of equilibrium constant |             |
| Class 35       | Relation between $K_p$ and $K_c$ , Van't Hoff's reaction isotherm  |             |
| Class 36       | Free energy and its significance Heterogeneous equilibrium, Le Chatelier's principle   |             |
| <b>Week 13</b> | <b>Phase Rule/Chemical Kinetics</b>  |             |
| Class 37       | Phase Rule: Basic terms and phase rule derivation  |             |
| Class 38       | Phase Diagram of water and carbon dioxide  |             |
| Class 39       | Pseudo and zero order reaction, Half-life  |             |
| <b>Week 14</b> | <b>Chemical Kinetics</b>   |             |
| Class 40       | Determination and factors affecting the rate of a reaction   |             |
| Class 41       | First order reaction, Second order reaction  |             |
| Class 42       | Collision theory, Transition state theory  |             |

**ASSESSMENT STRATEGY**

| COURSE SCHEDULE |   |         |
|-----------------|---|---------|
| Class/<br>Week  | Intended topics to be covered   | Remarks |
| Class 1         | Introduction  |         |
| Class 2         | Standardization of Sodium Hydroxide (NaOH) Solution with Standard Oxalic Acid dihydrate ( $C_2H_2O_4 \cdot 2H_2O$ ) Solution.   |         |
| Class 3         | Standardization of Hydrochloric Acid (HCl) Solution with standard Sodium Hydroxide (NaOH) Solution.   |         |
| Class 4         | Standardization of Hydrochloric Acid (HCl) Solution with standard Sodium Carbonate ( $Na_2CO_3$ ) Solution.   |         |
| Class 5         | Determination of Calcium (Ca) Content in a calcium chloride dihydrate ( $CaCl_2 \cdot 2H_2O$ ) Solution with Standard Di-Sodium Ethylene Diamine Tetra Acetic Acid ( $Na_2$ -EDTA) Solution.  |         |
| Class 6         | Standardization of Sodium Thiosulphate Pentahydrate ( $Na_2S_2O_3 \cdot 5H_2O$ ) Solution with Standard Potassium Dichromate ( $K_2Cr_2O_7$ ) Solution.   |         |
| Class 7         | Estimation of Copper (Cu) Content in a Copper Sulphate Pentahydrate ( $CuSO_4 \cdot 5H_2O$ ) (Blue Vitriol) Solutions by Iodometric Method with standard Sodium Thiosulphate Pentahydrate ( $Na_2S_2O_3 \cdot 5H_2O$ ) Solution.                |         |
| Class 8         | Standardization of Potassium Permanganate ( $KMnO_4$ ) Solution with Standard Oxalic Acid dihydrate ( $C_2H_2O_4 \cdot 2H_2O$ ) Solution.   |         |
| Class 9         | Determination of Ferrous (Fe) Content in an Ammonium Ferrous Sulphate (Mohr's Salt) [ $FeSO_4 \cdot (NH_4)_2SO_4 \cdot 6H_2O$ ] Solution with Standard Potassium Permanganate ( $KMnO_4$ ) solution.  |         |
| Class 10        | Determination of Zinc (Zn) Content in a Zinc Sulphate Heptahydrate ( $ZnSO_4 \cdot 7H_2O$ ) Solution with Standard Di-Sodium Ethylene Diamine Tetra Acetic acid ( $Na_2$ -EDTA) ( $Na_2$ -EDTA) Solution by using Eriochrome black T indicator. |         |
| Class 11        | Practice Lab  |         |
| Class 12        | Lab Test  |         |
| Class 13        | Quiz Test   |         |

|   |                     |         |               |                 |

**COURSE CONTENT**

**ELECTRICITY & MAGNETISM:** Electric charges and Coulomb's law, electric field, electric field due to different cases, electric flux and the Gauss's law- some application of Gauss's law. Electric potential, electric potential due to different cases, capacitance and dielectrics and atomic view, dielectric and Gauss's law, Current and resistances: current density, ohm's law, resistivity-an atomic view, Biot-Savart law and Ampere's law and their applications, Laws of electromagnetic induction, self-inductance and mutual inductance, Magnetic force on a current carrying conductor, Torque on a current carrying loop, Hall effect, solenoid and toroid, Maxwell's equations, Magnetic field intensity, susceptibility, permeability, magnetization; classification of magnetic materials, soft and hard magnetic materials, superparamagnetic materials and their applications.

**STRUCTURE OF MATTER :** States of matter, Plasticity and Elasticity, crystalline and non-crystalline solids, single crystal and poly-crystal solids, unit cell, crystal systems, co-ordinations number, crystal planes and directions, NaCl and CsCl structure, defects in crystalline structures, packing factor, Miller indices, relation between inter-planar spacing and Miller indices, Bragg's law, methods of determination of inter-planar spacing from diffraction patterns; defects in solids: point defects, line defects, bonds in solids, inter-atomic distances, calculation of cohesive and bonding energy; introduction to band theory: distinction between metal, semiconductor and insulator.

**MECHANICS:** Linear momentum of a system of particles, Conservation of linear momentum, Elastic and inelastic collisions, Angular Kinematics, Torque, Rigid Bodies, Moment of Inertia, Angular momentum of a system of particles, Conservation of angular momentum. Introduction to Quantum Mechanics, Wave function, Uncertainty principle, Postulates of Quantum Mechanics, Schrödinger time independent and time dependent equation, Expectation value, Probability, Particle in a zero potential, Calculation of energy.

**SKILL MAPPING**

| No. | Course Learning Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>understand</b> the concept of electricity and magnetism, parameters of structure of solids, and mechanics                        | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>explain</b> different laws and theories in explaining phenomena of electricity and magnetism, structure of solids, and mechanics | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>solve</b> quantitative problems regarding electrical and magnetic, structural, and mechanical properties and parameter           | 3                     |   |   |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities | Engagement (hours) |
|----------------------------------|--------------------|
| Face-to-Face Learning            |                    |
| Lecture                          | 42                 |
| Practical / Tutorial / Studio    | -                  |
| Student-Centred Learning         | -                  |
| Self-Directed Learning           |                    |

|  |     |
|--|-----|
| Non-face-to-face learning                                    | 42  |
| Revision of the previous and (or) subsequent lecture at home | 21  |
| Preparation for final examination                            | 21  |
| Formal Assessment  |     |
| Continuous Assessment  | 2   |
| Final Examination  | 3   |
| Total  | 131 |

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Week       | Content   | Assessment                       |
|------------|---|----------------------------------|
| <b>1</b>   | <b>Course introduction</b>  | <b>CT – 1 and Midterm, Final</b> |
| Lecture 1  | Course Introduction   |                                  |
| Lecture 2  | Introduction to Electricity and Magnetism, Electric charges and Coulomb's law |                                  |
| Lecture 3  | Electric field, electric field due to different cases                         |                                  |
| <b>2</b>   | <b>Electric field generation</b>  |                                  |
| Lecture 4  | Electric flux and the Gauss's law- some application of Gauss's law            |                                  |
| Lecture 5  | Electric potential, electric potential due to different cases                 |                                  |
| Lecture 6  | Capacitance and dielectrics and atomic view                                   |                                  |
| <b>3</b>   | <b>Atomic view of electrical phenomena</b>                                    |                                  |
| Lecture 7  | Dielectric and Gauss's law  |                                  |
| Lecture 8  | Current and resistances: current density                                      | <b>Midterm, Final</b>            |
| Lecture 9  | Ohm's law, Resistivity-an atomic view   |                                  |
| <b>4</b>   | <b>Magnetism</b>  |                                  |
| Lecture 10 | Biot-Savart law and Ampere's law and their applications                       |                                  |
| Lecture 11 | Introduction to magnetism   |                                  |
| Lecture 12 | Laws of electromagnetic induction   |                                  |
| <b>5</b>   | <b>Magnetic phenomena</b>   |                                  |
| Lecture 13 | Self-inductance and mutual inductance   |                                  |
| Lecture 14 | Magnetic force on a current carrying conductor                                |                                  |
| Lecture 15 | Torque on a current carrying loop, Hall effect                                |                                  |
| <b>6</b>   | <b>Magnetic phenomena continued</b>   |                                  |
| Lecture 16 | Solenoid and Toroid   |                                  |
| Lecture 17 | Maxwell's equations   |                                  |
| Lecture 18 | Magnetic field intensity  |                                  |
| <b>7</b>   | <b>Magnetic materials</b>   |                                  |
| Lecture 19 | Susceptibility, Permeability, magnetization                                   |                                  |
| Lecture 20 | Classification of magnetic materials, soft and hard magnetic                  |                                  |

|                |  |                          |
|----------------|--|--------------------------|
|                | materials  |                          |
| Lecture 21     | Superparamagnetic materials and their applications                                       |                          |
| <b>MIDTERM</b> |  |                          |
| <b>8</b>       | <b>Crystalline structures</b>  | <b>CT – 2, FINAL</b>     |
| Lecture 22     | Introduction to Structure of Matter, States of matter                                    |                          |
| Lecture 23     | Plasticity and Elasticity, Crystalline and non-crystalline solids                        |                          |
| Lecture 24     | Single crystal and poly-crystal solids   |                          |
| <b>9</b>       | <b>Arrangement in crystalline structures</b>   |                          |
| Lecture 25     | Unit cell, crystal systems, co-ordinations number  |                          |
| Lecture 26     | Crystal planes and directions, NaCl and CsCl structure                                   |                          |
| Lecture 27     | Defects in crystalline structures  |                          |
| <b>10</b>      | <b>Bonding and defects in solids</b>   |                          |
| Lecture 28     | Packing factor, Miller indices, relation between inter-planar spacing and Miller indices |                          |
| Lecture 29     | Bragg's law, methods of determination of inter-planar spacing from diffraction patterns  | <b>CT – 3, FINAL</b>     |
| Lecture 30     | Defects in solids: point defects, line defects   |                          |
| <b>11</b>      | <b>Bonding and band theory</b>   |                          |
| Lecture 31     | Bonds in solids  |                          |
| Lecture 32     | Inter-atomic distances, calculation of cohesive and bonding energy                       |                          |
| Lecture 33     | Introduction to band theory: distinction between metal, semiconductor and insulator.     |                          |
| <b>12</b>      | <b>Mechanics</b>   |                          |
| Lecture 34     | Introduction to mechanics, Linear momentum of a system of particles                      |                          |
| Lecture 35     | Conservation of linear momentum, Elastic and inelastic collisions                        | <b>FINAL</b>             |
|                | <b>Angular momentum and kinematics</b>   |                          |
| Lecture 36     | Angular kinematics, torque, Rigid Bodies, Moment of Inertia                              |                          |
| <b>13</b>      |  |                          |
| Lecture 37     | Angular momentum of a system of particles, Conservation of angular momentum              |                          |
|                | <b>Quantum mechanics</b>   |                          |
| Lecture 38     | Introduction to Quantum Mechanics, Wave function   |                          |
| Lecture 39     | Uncertainty principle, Postulates of Quantum Mechanics                                   |                          |
| <b>14</b>      |  |                          |
| Lecture 40     | Schrödinger time independent and time dependent equation                                 | <b>FINAL EXAMINATION</b> |
| Lecture 41     | Expectation value, Probability   |                          |
| Lecture 42     | Particle in a zero potential, Calculation of energy                                      |                          |

| CURRICULUM STRUCTURE   |   |                       |         |
| Outcome Based Education (OBE)  |   |                       |         |
| SYNOPSIS/RATIONALE   |   |                       |         |
| To teach the students the basic Concepts, Principles and operations of Vector, Matrices and Application of Geometry. The aim of this course is to develop the analytical capability of Vector, Matrices and Geometry. Finally this course is designed to develop a capability of students to solve practical problems. |   |                       |         |

| OBJECTIVE  |   |                  |    |     |    |      |                       |
|--|---|------------------|----|-----|----|------|-----------------------|
| 1. Be able to impart basic knowledge on the Vector Analysis, Matrix and Geometry.<br>2. Achieving ability to familiarize the students with the working principle of calculating differentiation and integration of vector valued functions in Cartesian, cylindrical and spherical geometry.<br>3. Be able to provide knowledge on using concept of vector, matrix and Geometry in engineering area and solve other applied problems.<br>4. Be expert in imparting the depth knowledge on the vector analysis, matrix and co-ordinate geometry.  |   |                  |    |     |    |      |                       |
| COURSE OUTCOMES & GENERIC SKILLS   |   |                  |    |     |    |      |                       |
| No.  | Course Outcome  | Bloom's Taxonomy | PO | CP  | CA | KP   | Assessment Methods    |
| CO1  | <b>Define and identify</b> the physical explanation of different vector notation, <b>explain</b> the basic concept of matrix, 2D and 3D geometry. | C1-C2            | 1  | 1   |    | 1, 3 | T, F                  |
| CO2  | <b>Interpret</b> mathematics, science and engineering such as calculating volume and area of any object in vector field.                          | C2               | 1  | 1   |    | 3    | T, Mid Term Exam, F   |
| CO3  | Be proficient to <b>analyses</b> and <b>demonstrate</b> the technique in engineering problems which is taught in vector, matrix and Geometry.     | C1,C3            | 1  | 1,3 |    | 3    | Mid Term Exam, F, ASG |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T – Test ; PR – Project ; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)   |   |                  |    |     |    |      |                       |
| COURSE CONTENT   |   |                  |    |     |    |      |                       |
| <p><b>Vector Analysis:</b> Definition of Vector, Scalars and Vectors, Equality of direction ratios and vectors, Addition and Subtraction of Vectors, Multiplication of vectors by scalars, Position Vector of a point, Scalar and vector products of two vectors and their geometrical interpretation, Triple products and multiple products, Linear dependence and independence of vectors, Differentiation of vectors, Gradient of scalar functions, Divergence and curl of point functions, physical significance of gradient, divergence and curl, Definition of line, surface and volume integral, Integration of Vectors, Green's, stroke's and Gauss theorem and their application.</p> <p><b>Matrix:</b> Definition of Matrix, different types of matrices, Algebra of Matrices, Multiplication of matrices, Transpose and adjoint of a matrix, inverse of a matrix, rank and elementary transformation, solution of linear equation or System of Linear Equation, linear dependence and independence of vectors, quadratic forms, matrix polynomials, determination characteristic roots and vectors, null space and nullity of matrix, characteristic subspace of matrix, Eigen values and Eigen Vectors, Caley-Hamilton theorem.</p> <p><b>Coordinate Geometry:</b> Introduction to geometry, Rectangular co-ordinates, Angle between two lines, Transformation of co-ordinates, changes of axes, The plane-angle between two planes, pair of straight lines, general equation of second degree and reduction to its standard forms and properties, circles (tangents, normal, chord of contact, pole and</p> |   |                  |    |     |    |      |                       |

polar), equation of conics, homogeneous equations of second degree, angle between straight lines, pair of lines joining the origin to the point of intersection of two given curves, equations of parabola, ellipse in Cartesian and polar coordinates, system of circles (radical axes, coaxial circles, limiting points), Three dimensional co-ordinate system, direction cosines, projections, the plane (angle between two planes, parallel & perpendicular plane, distance of a point from a plane) and the straight line (coplanar lines, shortest distance between two given straight lines), standard equation of sphere, ellipsoid, hyperboloid.

# SKILL MAPPING

| No. | Course Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>define and identify</b> the physical explanation of different vector notation, <b>explain</b> the complete concept about matrix, 2D and 3D geometry.   | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>interpret</b> mathematics, science and engineering such as calculating volume and area of any object in vector field.  | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be proficient to <b>determine</b> and <b>find</b> the technique to obtain the inverse matrix and <b>calculate</b> length, volume and area of objects related to engineering study by using vector, <b>solve</b> the system of linear equations using matrix and the problems related to the pair of straight lines, circles, system of circles, parabola, ellipse etc. | 3                     |   |   |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium and 1 as low level of matching)

## Justification for CO-PO mapping:

| Mapping    | Corresponding Level of matching | Justifications  |
|------------|---------------------------------|---|
| CO1-PO1(a) | 3                               | The knowledge of mathematics, science and engineering has to be applied to describe the operation of being able to identify the physical explanation of different vector notation, explain the complete concept about matrix, 2D and 3D geometry. |
| CO2-PO1(a) | 3                               | In order to interpret mathematics, science and engineering such as calculating inverse matrix and volume and area of any object in vector field.  |
| CO3-PO1(a) | 3                               | In order to construct and calculate the area of objects related to engineering study by using vector, <b>solve</b> the system of linear equations using matrix and geometry related problems.   |

| COURSE SCHEDULE   |  |                    |
|   |  |                    |
| Week 1  |  | CT 1               |
| Class 1   | Definition of vector, Scalars and Vectors, Equality of direction ratios and vectors, Addition , Subtraction and multiplication of vectors,         |                    |
| Class 2   | Position vector of a point, Scalar and vector products of two vectors and their geometrical interpretation, Triple products and multiple products, |                    |
| Class 3   | Linear dependence and independence of vectors, Differentiation of vectors,   |                    |
| Week 2  |  |                    |
| Class 4   | Gradient of scalar functions, Divergence and curl of point functions,  |                    |
| Class 5   | Physical significance of gradient, divergence and curl   |                    |
| Class 6   | Physical significance of gradient, divergence and curl   |                    |
| Week 3  |  |                    |
| Class 7   | Integration of vectors (line, surface and volume integrals)  |                    |
| Class 8   | Integration of vectors (line, surface and volume integrals)  | CT 2               |
| Class 9   | Integration of vectors (line, surface and volume integrals)  |                    |
| Week 4  |  |                    |
| Class 10  | Green's, Stoke's and Gauss's theorem and their application   |                    |
| Class 11  | Green's, Stoke's and Gauss's theorem and their application   |                    |
| Class 12  | Green's, Stoke's and Gauss's theorem and their application   |                    |

|                |   |  |
|----------------|---|--|
| <b>Week 5</b>  |   |  |
| Class 13       | Definition of Matrix, different types of matrices, Algebra of Matrices, Multiplication of matrices,   |  |
| Class 14       | Transpose and adjoint of a matrix, inverse of a matrix,   |  |
| Class 15       | Rank and elementary transformation.   |  |
| <b>Week 6</b>  |   |  |
| Class 16       | Solution of linear equation or System of Linear Equation,   |  |
| Class 17       | Linear dependance and independence of vectors,  |  |
| Class 18       | Quadratic forms, matrix polynomials, determination characteristic roots and vectors   |  |
| <b>Week 7</b>  |   |  |
| Class 19       | Null space and nullity of matrix, characteristic subspace of matrix,  |  |
| Class 20       | Eigen values and Eigen Vectors  |  |
| Class 21       | Caley-Hamilton theorem - concepts and problems  |  |
| <b>Week 8</b>  |   |  |
| Class 22       | Introduction to geometry, Rectangular co-ordinates, Angle between two lines,  |  |
| Class 23       | Transformation of co-ordinates, changes of axes,  |  |
| Class 24       | The plane-angle between two planes, pair of straight lines  |  |
| <b>Week 9</b>  |   |  |
| Class 25       | Pair of straight lines, general equation of second degree and reduction to its standard forms and properties,   |  |
| Class 26       | Circles (tangents, normal, chord of contact, pole and polar),   |  |
| Class 27       | Circles (tangents, normal, chord of contact, pole and polar),   |  |
| <b>Week 10</b> |   |  |
| Class 28       | Equation of conics,   |  |
| Class 29       | Equation of conics,   |  |
| Class 30       | Homogeneous equations of second degree,   |  |
| <b>Week 11</b> |   |  |
| Class 31       | Angle between straight lines, pair of lines joining the origin to the point of intersection of two given curves, equations of parabola, ellipse in Cartesian and polar coordinates, |  |
| Class 32       | Pair of lines joining the origin to the point of intersection of two given curves, equations of parabola, ellipse in Cartesian and polar coordinates,                               |  |
| Class 33       | Pair of lines joining the origin to the point of intersection of two given curves, equations of parabola, ellipse in Cartesian and polar coordinates,                               |  |
| <b>Week 12</b> |   |  |
| Class 34       | System of circles (radical axes, coaxial circles, limiting points),   |  |
| Class 35       | System of circles (radical axes, coaxial circles, limiting points),   |  |
| Class 36       | Three dimensional co-ordinate system,   |  |
| <b>Week 13</b> |   |  |
| Class 37       | Direction cosines, projections,   |  |
| Class 38       | The plane (angle between two planes, parallel & perpendicular plane, distance of a point from a plane).   |  |

| This course introduces students to the theories and structures of chemicals in thermodynamics and equilibrium, hydrocarbons, and biomolecules. Principles of thermodynamics and free energy, chemical equilibrium, reaction mechanisms and rates, hydrocarbon structures and reactions, structures and mechanisms of sugars, polysaccharides, proteins, and biomolecules are covered in depth.  |  |                       |              |               |             |      |                    |
| OBJECTIVE   |  |                       |              |               |             |      |                    |
| 1. To acquire sufficient knowledge of the concepts and parameters of thermodynamics, entropy, equilibrium, and reaction rates.  |  |                       |              |               |             |      |                    |
| 2. To analyze reaction rates and chemical equilibrium   |  |                       |              |               |             |      |                    |
| 3. To describe the structures, synthesis, and reaction mechanisms of various hydrocarbons and organic compounds   |  |                       |              |               |             |      |                    |
| 4. To be able to explain the chemistry behind different bioconjugate techniques, biomolecules, sugars, proteins, lipids, and biological molecules   |  |                       |              |               |             |      |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |  |                       |              |               |             |      |                    |
| No.   | Course Outcome   | Bloom's Taxonomy      | PO           | CP            | CA          | KP   | Assessment Methods |
| CO1   | Be able to understand concepts of thermodynamics, kinetics, and entropy                                      | C2                    | 1            | 1             | -           | 1, 2 | T, F               |
| CO2   | Be able to apply the concepts of thermodynamics and kinetics to calculating reaction rates and energy        | C3                    | 2            | 1             | -           | 1, 2 | T, F               |

| Total  | 131                |

### TEACHING METHODOLOGY

Lecture and discussion, Co-operative and collaborative method, Problem based method

### COURSE SCHEDULE

| Week      | Content   | Assessment                |
|-----------|---|---------------------------|
| 1         | Course introduction   | CT – 1 and Midterm, Final |
| Lecture 1 | Course Introduction   |                           |
| Lecture 2 | Introduction to Thermodynamics and Kinetics: Overview of thermodynamics and kinetics from chemistry I |                           |
| Lecture 3 | Heat and enthalpy   |                           |
| 2         | Thermodynamics and Free Energy  |                           |
| Lecture 4 | Second law of thermodynamics and entropy, Free energy   |                           |

|            |  |               |                |
|------------|--|---------------|----------------|
| Lecture 5  | 3 <sup>rd</sup> law of thermodynamics                                      |               |                |
| Lecture 6  | Gibbs Free energy  |               |                |
| 3          | Equilibrium and Reaction mechanisms  |               |                |
| Lecture 7  | Equilibrium and free energy  |               |                |
| Lecture 8  | Reaction mechanism   |               |                |
| Lecture 9  | Arrhenius equation and catalysis   |               |                |
| 4          | Rates of reaction and gas law  |               |                |
| Lecture 10 | rates of reaction  |               |                |
| Lecture 11 | Kinetic theory of gases, ideal gas law                                     |               |                |
| Lecture 12 | Review Class   |               |                |
| 5          | Chemistry of hydrocarbons  |               | Midterm, Final |
| Lecture 13 | Organic chemistry: Chemistry of hydrocarbons                               |               |                |
| Lecture 14 | Organic chemistry: Chemistry of hydrocarbons,                              |               |                |
| Lecture 15 | Synthetic methods of common organic compounds                              |               |                |
| 6          | Reaction mechanisms and structure of organic compounds                     |               |                |
| Lecture 16 | Reaction mechanism of typical organic reactions                            |               |                |
| Lecture 17 | Reaction mechanism of typical organic reactions                            |               |                |
| Lecture 18 | Structure determination of organic compounds, alkenes, aromatics           |               |                |
| 7          | Structure of organic compounds   |               |                |
| Lecture 19 | ether, aldehyde, esters  |               |                |
| Lecture 20 | amide, amine   |               |                |
| Lecture 21 | Basic chemistry of biomolecules  |               |                |
| MIDTERM    |  |               |                |
| 8          | Bioconjugate techniques  | CT – 2, FINAL |                |
| Lecture 22 | bio-conjugation techniques   |               |                |
| Lecture 23 | bio-conjugation techniques   |               |                |
| Lecture 24 | Molecular logic of living system, Biomolecules and cells                   |               |                |
| 9          | Sugars   |               |                |
| Lecture 25 | Sugars and their types, sugar derivatives and biologically relevant sugars |               |                |
| Lecture 26 | structure and isomerism  |               |                |
| Lecture 27 | Reactions of sugars  |               |                |
| 10         | Polysaccharides  |               |                |
| Lecture 28 | polysaccharides and glycosidic bonds, amylose and amylopectin              |               |                |
| Lecture 29 | Starch, glycogen, and cellulose  |               |                |
| Lecture 30 | heteropolysaccharides  |               |                |
| 11         | Lipids   | CT – 3, FINAL |                |
| Lecture 31 | lipids-triglycerides   |               |                |
| Lecture 32 | Phospholipids  |               |                |
| Lecture 33 | Lipid membranes and structures   |               |                |
| 12         | Proteins and their structure   |               |                |
| Lecture 34 | amino acids, amino acid sequences  |               |                |
| Lecture 35 | primary, secondary, tertiary and quaternary structure                      |               |                |
| Lecture 36 | classification of proteins   |               |                |
| 13         | Chemistry of biological molecules  |               |                |

|  |                            |       |                 |            |

| This course has mainly been designed to improve speaking and oral communication skills of the students. The course includes instructions and experience in speech preparation and speech delivery within various real life situations, formal and informal. Emphasis will be given on various speeches, such as informative, persuasive and interactive. This course will help students progress in real life both personally and professionally. Students will be able to understand class lectures and can comfortably continue the Engineering course, and also to compete in the global job market and increase career skills.  |  |                  |                       |               |             |    |                    |
| OBJECTIVE   |  |                  |                       |               |             |    |                    |
| <div>1. To develop the four basics skills of English language, i.e. listening, speaking, reading and writing.</div> <div>2. To develop students’ interpersonal skills engaging them in various group interactions and activities.</div> <div>3. To improve students’ pronunciation in order to improve their level of comprehensibility in both speaking and listening.</div> <div>4. To give the students exposure to different types of texts in English in order to make them informed using different techniques of reading.</div> <div>5. To gain an understanding of the underlying writing well-organized paragraphs and also to teach how to edit and revise their own as well as peer’s writing.</div> |  |                  |                       |               |             |    |                    |

| COURSE CONTENT  |  |                       |   |   |   |   |   |   |   |                    |    |    |    |
|---|--|-----------------------|---|---|---|---|---|---|---|--------------------|----|----|----|
| <p><b>Speaking:</b> Introduction to Language: Introducing basic skills of language. English for Science and Technology. Self-introduction and introducing others: How a speaker should introduce himself to any stranger / unknown person / a crowd. Name, family background, education, experience, any special quality/interest, likings/disliking, etc. Asking and answering questions, Expressing likings and disliking; (food, fashion etc.) Asking and giving directions. Discussing everyday routines and habits, Making requests/offers/invitations/excuses/apologies/complaints. Describing personality, discussing and making plans(for a holiday or an outing to the cinema), Describing pictures / any incident / event. Practicing storytelling, Narrating personal experiences/Anecdotes. Telephone conversations (role play in group or pair). Situational talks / dialogues: Practicing different professional conversation (role play of doctor-patient conversation, teacher –student conversation).</p> <p><b>Listening:</b> Listening and understanding: Listening, note taking and answering questions; Students will listen to recorded text, note down important information and later on will answer to some questions. Difference between different accents: British and American accents; Documentaries from BBC and CNN will be shown and students will try to understand. Listening to short conversations between two persons/more than two.</p> <p><b>Reading:</b> Reading techniques: scanning, skimming, predicting, inference; Reading Techniques: analysis, summarizing and interpretation of texts.</p> <p><b>Writing:</b> Introductory discussion on writing, prewriting, drafting; Topic sentence, paragraph development, paragraph structure, describing a person/scene/picture, narrating an event; Paragraph writing, Compare-contrast and cause- effect paragraph.</p> |  |                       |   |   |   |   |   |   |   |                    |    |    |    |

| SYNOPSIS/RATIONALE  |   |                 |                       |              |     |               |      |                       |
| To teach the students the basic Concepts, Principles and operations of Differential Equation, Laplace Transform and Application of Fourier Analysis in Engineering problem. The aim of this course is to develop the analytical and practical capability of Differential equation, Laplace Transform and Fourier Analysis.  |   |                 |                       |              |     |               |      |                       |
| OBJECTIVE   |   |                 |                       |              |     |               |      |                       |
| <div>1. To provide a physical interpretation of the Differential Equations and Laplace Transform.</div> <div>2. Able to explain the characteristics of Ordinary Differential Equations and Laplace Transform.</div> <div>3. To apply Laplace and Fourier Transform in solving complex problems.</div> <div>4. To use differential operations for simplification of complexengineering expressions</div> |   |                 |                       |              |     |               |      |                       |
| COURSE OUTCOMES & GENERIC SKILLS  |   |                 |                       |              |     |               |      |                       |

| C1 - Remember   |   | C2 - Understand | C3 - Apply            | C4 - Analyze |     | C5 - Evaluate |      | C6 - Create           |

**COURSE CONTENT**

**Differential Equations (DE):** Introduction to DE, Formulation of DE, Degree and order of Ordinary Differential Equation(ODE), solution of first order but higher degree DE, solution of first order DE by various methods, solution of general LEs of second and higher order, Solution of Euler's homogeneous linear DEs, Solution of DEs by methods based on factorization, Application of ODE, Frobenius methods, Solution of differential equations of the higher order when dependent and independent variables are absent, Bessel's functions, Legendre's polynomial, Power series solution of DE and their application, Integral form of DE and its application to engineering problem, Formation of partial differential equations, linear and nonlinear first order Partial Differential Equation(PDE), Standard form Linear Equations (LE) of higher order, Equation of second order with variable coefficients, wave equation, particular solutions with boundary and initial condition, Integral surface passing through given curve, Non-linear PDE of order one, Charpit's method, Second order PDE and classification to canonical solution, Linear PDE with constant coefficients, Applications of PDE.

**Laplace Transform (LT):** Definition and properties of Laplace transform, Sufficient conditions for existence of Laplace transforms, Laplace transform of some basic functions, LT of derivatives, Unit step function, Periodic function, Some special theorems on LT, Inverse Laplace transform, Partial fraction, Heaviside expansion formula, Convolution theorem, Evaluation of improper integral, Solution of Differential Equations by LT, Application of LT.

**Fourier Transform:** Real and Complex form of Fourier Series, Definition and expansion of a function of  $x$  in a Fourier Series, Physical application of Fourier Series, Finite Fourier Transform, Fourier Integral, Inverse Fourier transform, Fourier transform and their uses in solving boundary value problems, Diffusion, wave, Laplace Equation

**SKILL MAPPING**

| No. | Course Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | <b>Identify</b> differential equations of various types and <b>recognize</b> the basic properties of Laplace and Fourier transform.   | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | <b>Interpret</b> the classifications of differential equations and <b>estimate</b> the technique of Laplace transform and Fourier transform of some elementary function.                                | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | <b>Solve</b> different types of differential equations and <b>apply</b> Laplace transform to DE and Fourier and inverse Fourier transform to make use of boundary value problems in Engineering fields. | 3                     |   |   |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Week       | Topic  | Assessment            |
|------------|--|-----------------------|
| <b>1</b>   | <b>Differential Equations</b>  | <b>CT – 1, Final</b>  |
| Lecture 1  | Introduction to DE, Formulation of DE, Degree and order of ODE   |                       |
| Lecture 2  | Solution of first order DE by various methods  |                       |
| Lecture 3  | Solution of first order DE by various methods  |                       |
| <b>2</b>   |  |                       |
| Lecture 4  | Solution of first order DE by various methods,   |                       |
| Lecture 5  | Solution of first order but higher degree DE, solution of general LEs of second and higher order           |                       |
| Lecture 6  | Solution of Euler's homogeneous linear DEs   |                       |
| <b>3</b>   |  |                       |
| Lecture 7  | Solution of DEs by methods based on factorization,   | <b>Midterm, Final</b> |
| Lecture 8  | Frobenious methods – concept   |                       |
| Lecture 9  | Frobenious methods – problems  |                       |
| <b>4</b>   |  |                       |
| Lecture 10 | Solution of differential equations of the higher order when dependent and independent variables are absent |                       |
| Lecture 11 | Bessel's functions, Legendre's polynomial, Power series solution of DE and their application,              |                       |
| Lecture 12 | Integral form of DE and its application to engineering problem,  |                       |
| <b>5</b>   |  | <b>Midterm, Final</b> |
| Lecture 13 | Formation of partial differential equations, linear and non linear   |                       |

|               |  |               |
|---------------|--|---------------|
|               | first order PDE,   |               |
| Lecture 14    | Standard form LEs of higher order  |               |
| Lecture 15    | Integral surface passing through given curve   |               |
| 6             |  |               |
| Lecture 16    | Non-linear PDE of order one, Charpit's method.   |               |
| Lecture 17    | Linear PDE with constant coefficients  |               |
| Lecture 18    | Linear PDE with constant coefficients  |               |
| 7             |  |               |
| Lecture 19    | Equation of second order with variable coefficients, Second order PDE and classification to canonical solution |               |
| Lecture 20    | wave equation, particular solutions with boundary and initial condition  |               |
| Lecture 21    | Application of ODE, Applications of PDE  |               |
| Midterm Break |  |               |
| 8             | Laplace Transform  | CT – 2, Final |
| Lecture 22    | Definition and properties of Laplace transform   |               |
| Lecture 23    | Sufficient conditions for existence of Laplace transforms  |               |
| Lecture 24    | Laplace transform of some basic functions, LT of derivatives   |               |
| 9             |  |               |
| Lecture 25    | Unit step function, Periodic function  |               |
| Lecture 26    | Some special theorems on LT  |               |
| Lecture 27    | Inverse Laplace transform  |               |
| 10            |  |               |
| Lecture 28    | Partial fraction,  |               |
| Lecture 29    | Heaviside expansion formula  |               |
| Lecture 30    | Convolution theorem  |               |
| 11            |  | CT – 3, FINAL |
| Lecture 31    | Evaluation of improper integral,   |               |
| Lecture 32    | Solution of Differential Equations by LT   |               |
| Lecture 33    | Application of LT  |               |
| 12            | Fourier Transform  |               |
| Lecture 34    | Real and Complex form of Fourier Series  |               |
| Lecture 35    | Definition and expansion of a function of x in a Fourier Series  |               |
| Lecture 36    | Physical application of Fourier Series   |               |
| 13            |  | FINAL         |
| Lecture 37    | Finite Fourier Transform   |               |
| Lecture 38    | Fourier Integral   |               |
| Lecture 39    | Inverse fourier transform  |               |
| 14            |  |               |
| Lecture 40    | Fourier transform and their uses in solving boundary value problems  |               |
| Lecture 41    | Fourier transform and their uses in solving boundary value problems  |               |
| Lecture 42    | Diffusion, wave, Laplace Equation  |               |

leadership) in the class (Interactive Learning).

**Organizational Management:** Organization; departmentalization; chain of command; unity of command; cross functional area; authority; centralization and decentralization; traditional & contemporary organization; matrix project structure; learning structure; organizing collaboration.

**Planning and goal setting:** Foundation of planning; goals of plan; types of goal; types of goal & plan; goal setting; MBO; well written goal.

**Control:** Controlling process; controlling for organizational performance; types of control: (feed-forward, feedback & concurrent); balanced scorecard; contemporary issues in control; workplace concern & workplace violence.

**Change and Innovation:** Change and innovation; internal and external for change; changing process; creativity vs innovation.

**Attitude:** Components of Attitude; behavior model and characteristics model; behavior vs. attitude; job attitude; job involvement; job satisfaction and customer satisfaction.

**Personality:** Personality determinants: heredity and environment; Myers-Briggs Type Indicator; Big five personality model; personality traits (core self-evaluation, Machiavellianism, narcissism, self-monitoring, risk taking, proactive personality).

**Perception and Individual Decision Making:** Factors influencing perception; attribution theory; errors/biases in attribution; Factors of individual decision making; rational decision making; bounded rationality; satisfice; common errors in decision making; creativity in decision making.

**Understanding Work Team:** Work group; work team; problem solving team; self-managed work team; cross functional team; virtual team; team effectiveness; team challenges.

**HR Management:** Process of Human Resource Planning; forecasting demand for labor; staffing; internal supply of labor; performance appraisal.

**Operations Management:** Project managing basics; goals and boundary of project; WBS; scheduling a project; Demand and supply forecasting; inventory control.

**Information Technology and Management:** Management Information System (MIS); Enterprise Resource Planning (ERP) - For introductory knowledge.

#### SKILL MAPPING

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | <b>Familiarize</b> with the fundamental concepts of leadership and management skills  |                       |   |   |   |   |   |   |   | 3 | 3  |    |    |
| CO2 | <b>Understand</b> the role and contribution of a leader in achieving organizational goals                                       |                       |   |   |   |   |   |   |   | 3 | 3  |    |    |
| CO3 | <b>Understand</b> the contribution of leadership traits and management skills in decision making and solving real life problems |                       |   |   |   |   |   |   |   | 3 | 3  |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

#### TEACHING LEARNING STRATEGY

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 28                 |
| Practical / Tutorial / Studio                                | -                  |
| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 28                 |
| Revision of the previous and (or) subsequent lecture at home | 14                 |
| Preparation for final examination                            | 14                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 89                 |

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Weeks     | Topics   | Assessment                |
|-----------|--|---------------------------|
| 1         |  | CT – 1 and Midterm, Final |
| Lecture 1 | <b>Introduction to Leadership and Management:</b> Definition of leadership and management; basic difference between a leader and a manager; relation of leaders and managers with respect to efficiency and effectiveness; qualities of leader and managers with examples from history.  |                           |
| Lecture 2 | <b>Management Fundamentals:</b> Definition of management & manager; levels of management;management functions and skills; Mintzberg’s managerial roles; Henri Fayol’s management principles; strategic management.   |                           |
| 2         |  |                           |
| Lecture 3 | <b>Leadership &amp; Motivation:</b> Motivation, Maslow’s hierarchy needs; theory of X & Y; motivators and hygiene factors; goal setting theory; reinforcement theory; equity theory; expectancy theory   |                           |
| Lecture 4 | <b>Leadership &amp; Motivation:</b> Motivation, Maslow’s hierarchy needs; theory of X & Y; motivators and hygiene factors; goal setting theory; reinforcement theory; equity theory; expectancy theory   |                           |
| 3         |  |                           |
| Lecture 5 | <b>Leadership:</b> Leadership styles; leadership trait theory; managerial grid; contemporary leadership; conflicts negotiation; leadership issues in 21st century; cross cultural leadership; engineer as a leader and some simple case discussions on leadership (positive and toxic leadership) in the class (Interactive Learning). |                           |
| Lecture 6 | <b>Leadership:</b> Leadership styles; leadership trait theory; managerial grid; contemporary leadership; conflicts negotiation; leadership issues in 21st century; cross cultural leadership; engineer as a leader   |                           |

|            |  |                |
|------------|--|----------------|
|            | and some simple case discussions on leadership (positive and toxic leadership) in the class (Interactive Learning).  |                |
| 4          |  |                |
| Lecture 7  | Case Study – I : Engineer as Great Leaders   |                |
| Lecture 8  | Case Study – I : Engineer as Great Leaders   |                |
| 5          |  |                |
| Lecture 9  | Organizational Management:Organization; departmentalization; chain of command; unity of command; cross functional area; authority; centralization and decentralization; traditional & contemporary organization; matrix project structure; learning structure; organizing collaboration. | Midterm, Final |
| Lecture 10 | Planning and goal setting:Foundation of planning; goals of plan; types of goal; types of goal & plan; goal setting; MBO; well written goal.  |                |
| 6          |  |                |
| Lecture 11 | Control: Controlling process; controlling for organizational performance; types of control: (feed-forward, feedback & concurrent); balanced scorecard; contemporary issues in control; workplace concern & workplace violence.   |                |
| Lecture 12 | Change and Innovation: Change and innovation; internal and external for change; changing process; creativity vs innovation.  |                |
| 7          |  |                |
| Lecture 13 | Case Study – II : Planning and Goal Setting; A Managerial Approach: Engineer as Great Managers (Interactive Discussions in the Class)  |                |
| Lecture 14 | Attitude: Components of Attitude;behavior model and characteristics model;behavior vs. attitude; job attitude; job involvement; job satisfaction and customer satisfaction.  |                |
| MIDTERM    |  |                |
| 8          |  |                |
| Lecture 15 | Personality:Personality determinants: heredity and environment; Myers-Briggs Type Indicator; Big five personality model; personality traits (core self-evaluation, Machiavellianism, narcissism, self-monitoring, risk taking, proactive personality).                                   | CT – 2, FINAL  |
| Lecture 16 | Perception and Individual Decision Making:Factors influencing perception; attribution theory; errors/biases in attribution   |                |
| 9          |  |                |
| Lecture 17 | Perception and Individual Decision Making:Factors of individual decision making; rational decision making; bounded rationality; satisfice; common errors in decision making; creativity in decision making.  |                |
| Lecture 18 | Case Study – III : A Case on Decision Making – Involves both leadership and managerial skills (Interactive Discussion in the Class)  |                |
| 10         |  |                |

|            |  |                      |
|------------|--|----------------------|
| Lecture 19 | <b>Understanding Work Team:</b> Work group; work team; problem solving team; self-managed work team; cross functional team; virtual team; team effectiveness; team challenges.   | <b>CT – 3, FINAL</b> |
| Lecture 20 | <b>HR Management:</b> Process of Human Resource Planning; forecasting demand for labor; staffing.  |                      |
| <b>11</b>  |  |                      |
| Lecture 21 | <b>HR Management:</b> Internal supply of labor; performance appraisal.   |                      |
| Lecture 22 | <b>Operations Management:</b> Project managing basics; goals and boundary of project; WBS; scheduling a project.   |                      |
| <b>12</b>  |  |                      |
| Lecture 23 | <b>Operations Management:</b> Demand and supply forecasting; inventory control.  |                      |
| Lecture 24 | <b>Exercise – Use of Microsoft Project (MSP) for scheduling a project at student level</b>   |                      |
| <b>13</b>  |  |                      |
| Lecture 25 | <b>Case Study – IV:</b> A case that covers all relevant theories taught throughout the course and involves both leadership and management issues, e.g., Columbia's Final Mission. (This may be given as group assignment followed by in class short presentations/discussions) |                      |
| Lecture 26 | <b>Case Study – IV:</b> A case that covers all relevant theories taught throughout the course and involves both leadership and management issues, e.g., Columbia's Final Mission. (This may be given as group assignment followed by in class short presentations/discussions) |                      |
| <b>14</b>  |  |                      |
| Lecture 27 | <b>Information Technology and Management:</b> Management Information System (MIS); Enterprise Resource Planning (ERP) - For introductory knowledge.  |                      |
| Lecture 28 | <b>Revision</b>  |                      |

| CURRICULUM STRUCTURE   |  |                       |        |    |    |    |                    |
| Outcome Based Education (OBE)  |  |                       |        |    |    |    |                    |
| SYNOPSIS/RATIONALE   |  |                       |        |    |    |    |                    |
| The English language course is designed for the students to develop their competence in communication skills for academic purposes especially in reading and writing. The approach will be communicative and interactive and will involve individual, pair and group work. Students will be exposed to different types of texts to develop efficient reading skill. Reading will also involve activities and discussions leading to effective writing. The course incorporates a wide range of reading texts to develop students’ critical thinking which is one of the most essential elements required to write a good piece of academic writing. Emphasis is particularly put on the various forms of essay writing such as descriptive, narrative, cause-effect, compare-contrast, and argumentative. Upon completion of this course, students are expected to be able to communicate at various situations, participate in group activities and prepare formal speech for academic, professional and social purposes. This course also incorporates classroom instructions to provide guidelines on presentations and communication skills. In addition, the course emphasizes on providing constructive feedback on students’ oral performances. |  |                       |        |    |    |    |                    |
| OBJECTIVE  |  |                       |        |    |    |    |                    |
| 1. To develop English language skills to communicate effectively and professionally.   |  |                       |        |    |    |    |                    |
| 2. To strengthen students’ presentation skills.  |  |                       |        |    |    |    |                    |
| 3. To develop competency in academic reading and writing.  |  |                       |        |    |    |    |                    |

### COURSE CONTENT

**Speaking:** Reading Comprehension: Practice using different techniques; Academic reading: comprehension from departmental or subject related passages; Vocabulary for Engineers (some common Engineering terms for both general and dept specific); Reading subject specific text to develop vocabulary.

**Writing:** Writing semi-formal, Formal/official letters, Official E-mail; Applying for a job: Writing Cover Letter and Curriculum Vitae; Statement of Purpose (SOP) writing, Proposal Writing: writing steps, principles and techniques, outlining, revising, editing, proofreading; Report writing, article writing: comparison-contrast and cause – effect, argumentative and opinion expression, assignment writing; Analyzing and describing graphs or charts; Practicing analytical and argumentative writing.

**Speaking:** Public Speaking: Basic elements and qualities of a good public speaker; Set Speech: How to get ready for any speech. Individual / Group presentation: How to be ready for presentation, prepare script for good speech, preparing power point slides, etc. Selected books/Selected stories for presentation.

**Listening:** Listening to long lecture on some topics, Listening and understanding speeches/lectures of different accent.

### SKILL MAPPING

| No. | Course Learning Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Listen, understand, and learn the techniques of note taking and answering questions.           | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Understand and speak English quickly and smartly using the techniques learnt in the class.     | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Communicate effectively within the shortest possible time to present their ideas and opinions. |                       |   |   |   |   |   |   |   |   | 3  |    |    |
| CO4 | Develop competency in oral, written communication/presentation                                 |                       |   |   |   |   |   |   |   |   | 3  |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

### TEACHING LEARNING STRATEGY

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 7                  |

| SYNOPSIS/RATIONALE  |  |                       |        |    |    |                     |
| To teach the students the concepts, principles and working field of Complex Variable and Linear Algebra. It is targeted to provide a basic foundation and applications of complex analysis and to develop the topics of analytic functions, the elementary functions and contour integration. Finally this course is designed to demonstrate practical applications and problems by using the sectors surrounding Complex Variable and Linear algebra.                            |  |                       |        |    |    |                     |
| OBJECTIVE   |  |                       |        |    |    |                     |
| 1. Be able to impart basic knowledge about Complex Variable and Linear algebra.   |  |                       |        |    |    |                     |
| 2. Be able to familiarize the students with the characteristics of Complex Integration.   |  |                       |        |    |    |                     |
| 3. Be proficient with basic methods of complex differentiation, different matrix decomposition and their application.   |  |                       |        |    |    |                     |

| <b>COURSE SCHEDULE</b>  |  |             |
| <b>Week 1</b>   | <b>COMPLEX VARIABLE</b>  | <b>CT-1</b> |
| Class-1   | Complex number system  |             |
| Class-2   | Complex number system  |             |
| Class-3   | General functions of a complex variable                                      |             |
| <b>Week 2</b>   | <b>COMPLEX VARIABLE</b>  |             |
| Class-4   | Limits and continuity of a function of complex variable and related theorems |             |
| Class-5   | Limits and continuity of a function of complex variable and related theorems |             |
| Class-6   | Limits and continuity of a function of complex variable and related theorems |             |
| <b>Week 3</b>   | <b>COMPLEX VARIABLE</b>  |             |
| Class-7   | Differentiation of complex function  | <b>CT-2</b> |
| Class-8   | Differentiation of complex function  |             |
| Class-9   | The Cauchy Riemann equations - concepts                                      |             |
| <b>Week 4</b>   | <b>COMPLEX VARIABLE</b>  |             |
| Class-10  | The Cauchy Riemann equations - problems                                      |             |
| Class-11  | Mapping by elementary functions  |             |
| Class-12  | Line integral of a complex function  |             |
| <b>Week 5</b>   | <b>COMPLEX VARIABLE</b>  |             |
| Class-13  | Cauchy's Integral formula,   |             |
| Class-14  | Complex function,  |             |
| Class-15  | Convergence  |             |
| <b>Week 6</b>   | <b>COMPLEX VARIABLE</b>  |             |
| Class-16  | Uniform convergence  |             |
| Class-17  | Liouville's theorem  |             |

|                |  |  |
|----------------|--|--|
| Class-18       | Taylor's theorem                                   |  |
| <b>Week 7</b>  | <b>COMPLEX VARIABLE</b>                            |  |
| Class-19       | Laurents theorem                                   |  |
| Class-20       | Singular residues                                  |  |
| Class-21       | Cauchy's residue theorem                           |  |
| <b>Week 8</b>  | <b>LINEAR ALGEBRA</b>                              |  |
| Class-22       | Vector space and its basis.                        |  |
| Class-23       | Vector space and its dimension.                    |  |
| Class-24       | Linear Transformations                             |  |
| <b>Week 9</b>  | <b>LINEAR ALGEBRA</b>                              |  |
| Class-25       | Kernel of linear transformations                   |  |
| Class-26       | Kernel of linear transformations                   |  |
| Class-27       | Range of linear transformations                    |  |
| <b>Week 10</b> | <b>LINEAR ALGEBRA</b>                              |  |
| Class-28       | Range of linear transformations                    |  |
| Class-29       | Matrix Decomposition                               |  |
| Class-30       | LU Decomposition                                   |  |
| <b>Week 11</b> | <b>LINEAR ALGEBRA</b>                              |  |
| Class-31       | DU Decomposition                                   |  |
| Class-32       | QR decomposition                                   |  |
| Class-33       | QR decomposition                                   |  |
| <b>Week 12</b> | <b>LINEAR ALGEBRA</b>                              |  |
| Class-34       | Eigen value decomposition                          |  |
| Class-35       | Singular Value Decomposition.                      |  |
| Class-36       | Singular Value Decomposition.                      |  |
| <b>Week 13</b> | <b>LINEAR ALGEBRA</b>                              |  |
| Class-37       | Introduction to Principal Component Analysis (PCA) |  |
| Class-38       | Introduction to Principal Component Analysis (PCA) |  |
| Class-39       | Independent Component Analysis (ICA)               |  |
| <b>Week 14</b> | <b>LINEAR ALGEBRA</b>                              |  |

| The <i>Fundamentals of Research Methodology</i> is a hands-on course designed to impart education in the foundational methods and techniques of academic research in Science and Engineering context. UG students would examine and be practically exposed to the main components of a research framework i.e., problem definition, research design, data collection, ethical issues in research, time management, report writing, and presentation. Once equipped with this knowledge, participants would be well-placed to conduct disciplined research under supervision in an area of their choosing. In addition to their application in an academic setting, many of the methodologies discussed in this course would be similar to those deployed in professional research environments. |  |                       |                  |    |    |    |                                       |
| OBJECTIVES  |  |                       |                  |    |    |    |                                       |
| <div>1. To develop a research orientation among the UG students and to acquaint them with fundamentals of research methods.</div> <div>2. To evaluate/review related extant literature, form a variety of sources, pertinent to the research objectives/questions.</div> <div>3. To expose students to various research methodologies (design), relevant to the research problem needing to be addressed.</div> <div>4. To explain and justify how researchers will collect and analyse research data.</div> <div>5. To educate students in the common mistakes, research misconduct, and ethical considerations in the field of research methodology.</div>  |  |                       |                  |    |    |    |                                       |

**COURSE CONTENT**

- 1. Foundations of Research:** Meaning of Research; Definitions of Research; Objectives of Research; Motivation in Research; General Characteristics of Research; Criteria of Good Research; Types of Research; Concept of theory, empiricism, deductive and inductive theory; Characteristics of scientific method.
- 2. Problem Identification and Formulation:** Meaning and need of Review of Literature; How to Conduct the Review of literature; Research Question – Investigation Question – Measurement Issues – Hypothesis – Qualities of a good Hypothesis – Null Hypothesis & Alternative Hypothesis. Hypothesis Testing – Logic & Importance.
- 3. Research Design:** Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental/Computational Design: Concept of Independent & Dependent variables.
- 4. Data Analysis:** Data Preparation – Univariate analysis (frequency tables, bar charts, pie charts, percentages), Bivariate analysis – Cross tabulations and Chi-square test including testing hypothesis of association.
- 5. Research Misconduct and Ethics:** Understand the research misconduct; type of research misconduct; Ethical issues in conducting research; Ethical issues related to publishing, Plagiarism and Self-Plagiarism.
- 6. Use of Tools / Techniques for Research:** Layout of a Research Paper; Methods to search required information effectively; Reference Management Software like Zotero/Mendeley; Software for paper formatting like LaTeX/MS Office; Software for detection of Plagiarism. Time management and developing Gantt Charts.

| SYNOPSIS/RATIONALE   |   |                       |              |               |             |    |                    |
| This course introduces students to the considerations that need to be made for the environment and sustainability. National and international laws governing the protection of the environment, the relation between sustainable development and environmental protection, the roles involved in adhering to environmental laws, and the ethical obligations towards the environment are covered. Biosafety principles and practices for facilities, safe disposal of biohazardous and medical waste management, biosafety from a hospital perspective are also covered. |   |                       |              |               |             |    |                    |
| OBJECTIVE  |   |                       |              |               |             |    |                    |
| 1. To be familiar with the basic concepts of environmental protection and sustainability required to be followed internationally.  |   |                       |              |               |             |    |                    |
| 2. To have knowledge of the areas where rules and ethics for environmental protection are applied.   |   |                       |              |               |             |    |                    |
| 3. To correctly identify biosafety concerns and apply the principles for biosafety protection and contamination control depending on the scenario.   |   |                       |              |               |             |    |                    |
| 4. To be aware of the considerations for the environment and responsibilities of individuals, health organizations and industries in the safe treatment and disposal of hazardous wastes in hospitals.   |   |                       |              |               |             |    |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |   |                       |              |               |             |    |                    |

| This course prepares students for the responsibilities and accountability in their industrial career as a biomedical engineer. Ethical principles and guidelines to be followed in major areas for biomedical engineers such as engineering, manufacturing, medicine, genetics, and research are taught. Codes of conduct as established by institutions, professional conduct, responsibilities of engineers, rights of individuals and subjects involved in biomedical research are also explored in sufficient details.   |   |                       |              |               |             |    |                    |
| OBJECTIVE  |   |                       |              |               |             |    |                    |
| <ol style="list-style-type: none"><li>1. To understand the core principles, applicable areas, and necessities of engineering ethics and moral obligations.</li><li>2. To recognize the responsibilities and expectations of an engineer in applying ethics to protect individual, intellectual, and institutional rights according to the accepted code of ethics for engineers by institutions.</li><li>3. To apply guidelines of bioethics in hospital, device development, and biomedical research requiring involvement of patients and live subjects without causing harm or violating moral rules.</li></ol> |   |                       |              |               |             |    |                    |

| SYNOPSIS/RATIONALE   |  |                  |              |                       |        |             |                    |
| To learn the basics of electrical circuit components, analysis of DC and AC circuits and the basics of electrical machines. The course covers the following modules: DC and AC circuits, DC Generator, DC Motor, AC Machines, and Transformer.   |  |                  |              |                       |        |             |                    |
| OBJECTIVE  |  |                  |              |                       |        |             |                    |
| 1. To understand the basics of AC and DC circuits.   |  |                  |              |                       |        |             |                    |
| 2. To apply different laws of circuit theorems for solving various engineering problems.   |  |                  |              |                       |        |             |                    |
| 3. To explain the behavior of different electrical machines.   |  |                  |              |                       |        |             |                    |
| 4. To analyze different circuit-related complex engineering problems efficiently.  |  |                  |              |                       |        |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |  |                  |              |                       |        |             |                    |

| C1 - Remember   |   | C2 - Understand                   | C3 - Apply            | C4 - Analyze | C5 - Evaluate | C6 - Create |                    |
| COURSE CONTENT  |   |                                   |                       |              |               |             |                    |
| Introduction to Semiconductors; P-type and n-type semiconductors, p-n junction diode characteristics, Diode applications, half and full-wave rectifier, clipping and clamping circuits; regulated power supply using Zener diode. Bipolar junction transistor (BJT), principle of operation, I-V characteristics, Transistor circuits configurations (CB, CE and CC), BJT biasing, load lines, small-signal analysis of single and multi-stage amplifiers, frequency response of BJT amplifiers. Field effect transistors (FET), principle of operation of JFET and MOSFET, Depletion and Enhancement type NMOS and PMOS, biasing of FETs, Low and High frequency models of FETs, Switching circuit |   |                                   |                       |              |               |             |                    |

using FETs, Introduction to CMOS. Operational amplifier (OPAMP), linear application of OPAMPs, gain, input and output impedances, differential amplifiers, common-mode rejection ratio, instrumentation amplifier, active filters, frequency response and noise, zero crossing, positive and negative level detectors, and application of Op-Amp.

### SKILL MAPPING

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |

| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for the final examination                        | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

### TEACHING METHODOLOGY

Lecture and discussion, Co-operative and collaborative method, Problem based method

### COURSE SCHEDULE

| Week      | Topic   | Assessment |
|-----------|---|------------|
| <b>1</b>  | <b>Semiconductor devices</b>                                  |            |
| Lecture 1 | Basic idea about Electronics, Examples of electronic devices, |            |

|               |  |               |
|---------------|--|---------------|
|               | and comparison with electrical equipment's.  | CT – 1, Final |
| Lecture 2     | Introduction to semiconductor devices and its classifications, P-type and N-type materials, and doping                   |               |
| Lecture 3     | Semiconductor diode and its band diagram, Biasing of semiconductor diodes  |               |
| 2             | Diodes   |               |
| Lecture 4     | I-V characteristics of the diode and equivalent circuit of diodes, Shockley's equation and related mathematical problems |               |
| Lecture 5     | Zener diode and related maths of Zener diode   |               |
| Lecture 6     | Applications of diode  |               |
| 3             | Diodes   |               |
| Lecture 7     | Diode rectifiers   |               |
| Lecture 8     | Ripple factor, and related mathematical problems.  |               |
| Lecture 9     | Clipper circuit and related problems, Clamper circuit and related problems   | CT-2, Final   |
| 4             | BJT  |               |
| Lecture 10    | Introduction to BJT and construction   |               |
| Lecture 11    | Working principle and operating regions of BJT, CB, CE, and CC configurations and characteristics curves                 |               |
| Lecture 12    | Mathematical problems related to different configurations using BJT  |               |
| 5             | BJT  |               |
| Lecture 13    | BJT Biasing, Mathematical problems related to BJT biasing  |               |
| Lecture 14    | Mathematical problems related to BJT biasing   |               |
| Lecture 15    | Mathematical problems related to BJT biasing   |               |
| 6             | BJT  |               |
| Lecture 16    | BJT as an amplifier, BJT as a switch, and biasing the BJT for discrete circuits  |               |
| Lecture 17    | Small-signal analysis of single and multi-stage amplifiers   |               |
| Lecture 18    | Voltage and current gain, input and output impedance of a common base configurations                                     |               |
| 7             | BJT  |               |
| Lecture 19    | Voltage and current gain, input and output impedance of a common emitter configurations                                  |               |
| Lecture 20    | Voltage and current gain, input and output impedance of a common collector configurations                                |               |
| Lecture 21    | The frequency response of BJT amplifiers   |               |
| Midterm Break |  |               |
| 8             | FET  | Midterm       |
| Lecture 22    | Introduction to FET and comparative studies between BJT and FET  |               |
| Lecture 23    | Construction, operation, Drain characteristics, and Transfer characteristics of JFET                                     |               |
| Lecture 24    | Pinch off voltage  |               |
| 9             | FET  |               |
| Lecture 25    | Mathematical problems related to JFET  |               |

|            |   |  |
|------------|---|--|
| Lecture 26 | Introduction to MOSFET, construction, operation, input characteristics, output characteristics of depletion type MOSFET, and related mathematical problems. |  |
| Lecture 27 | Construction, operation, input characteristics, output characteristics of enhancement type MOSFET, and related mathematical problems                        |  |
| <b>10</b>  | <b>Biasing of FET</b>   |  |
| Lecture 28 | Biasing of JFET and related problems  |  |
| Lecture 29 | Biasing of MOSFET and related problems  |  |
| Lecture 30 | Biasing of MOSFET and related problems  |  |
| <b>11</b>  | <b>MOSFET</b>   |  |
| Lecture 31 | Threshold voltage, Body effect, current-voltage characteristics of an enhancement MOSFET  |  |
| Lecture 32 | Single-stage MOS amplifiers, MOSFET as a switch, CMOS inverter  |  |
| Lecture 33 | Mathematical Problems   |  |
| <b>12</b>  | <b>OP-AMP</b>   |  |
| Lecture 34 | Introduction to Op-amp, Characteristics, Gain, Input and Output Impedances  |  |
| Lecture 35 | Summing, Scaling, Averaging, and Subtractor Amplifiers  |  |
| Lecture 36 | Differential Amplifiers, Differentiator, and Integrator   |  |
| <b>13</b>  | <b>OP-AMP</b>   |  |
| Lecture 37 | Common Mode Rejection Ratio (CMRR)  |  |
| Lecture 38 | Active filters  |  |
| Lecture 39 | Active filters  |  |
| <b>14</b>  | <b>OP-AMP</b>   |  |
| Lecture 40 | Instrumentation Amplifiers  |  |
| Lecture 41 | Zero-Crossing Detector, Positive and Negative Voltage level detector  |  |
| Lecture 42 | Other Applications of Op-Amp  |  |

| Outcome-Based Education (OBE)  |   |                       |              |               |             |      |                    |
| SYNOPSIS/RATIONALE   |   |                       |              |               |             |      |                    |
| This course will cover the topics/subtopics that will help to learn and familiarize the fundamentals of digital electronics, including the basic logic gates, combinational and sequential circuits, Programmable logic devices, and Modular sequential logic circuit design.  |   |                       |              |               |             |      |                    |
| OBJECTIVE  |   |                       |              |               |             |      |                    |
| 1. To acquire the basic knowledge of digital logic levels and knowledge to understand digital electronics circuits.<br>2. To prepare students for performing the analysis and design of various combinational and sequential circuits.   |   |                       |              |               |             |      |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |   |                       |              |               |             |      |                    |
| No.  | Course Outcome  | Bloom’s Taxonomy      | PO           | CP            | CA          | KP   | Assessment Methods |
| CO1  | Be able to <b>remember</b> the structure of various number systems and its application in digital design.   | C1                    | 1            | 1             | -           | 1,3  | T, F               |
| CO2  | Be able to <b>understand</b> the design criterion of combinational and sequential logic circuits as needed. | C2                    | 1            | 1,3           | -           | 1,3  | T, F               |
| CO3  | Be able to <b>apply</b> the logic gates to solve the real-world Problem of electronic circuits.             | C3                    | 2            | 1             | -           | 1, 3 | MID, F             |
| CO4  | Be able to <b>analyze</b> the memory elements, state table, and state diagrams of the sequential circuit.   | C4                    | 2            | 1,3           | -           | 1,3  | T, F               |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T-Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)   |   |                       |              |               |             |      |                    |
| C1 - Remember  | C2 - Understand   | C3 - Apply            | C4 - Analyze | C5 - Evaluate | C6 - Create |      |                    |
| COURSE CONTENT   |   |                       |              |               |             |      |                    |
| Introduction to number systems and codes: Number base conversion, Complements, and related problems, Binary codes; Analysis and synthesis of digital logic circuits: Basic logic functions, Boolean algebra, combinational logic design, minimization of combinational logic. Implementation of basic static logic gates in CMOS and BiCMOS: DC characteristics, noise margin, and power dissipation. Power optimization of basic gates and combinational logic circuits. Modular combinational circuit design: Pass transistor, pass gates, multiplexer, demultiplexer, and their implementation in CMOS, decoder, encoder, comparators, binary arithmetic elements, and ALU design. Programmable logic devices: Logic arrays, field programmable logic arrays, and programmable read-only memory. Sequential circuits: |   |                       |              |               |             |      |                    |

Different types of latches, SR flip-flops, master-slave, JK flip-flops, T & D flip-flops, Flip-flops design using ASM approach, Timing analysis, and power optimization of sequential circuits. Modular sequential logic circuit design: Shift registers, Parallel I/O and Series I/O shift registers, Universal shift register, Counters: Introduction, Asynchronous and Synchronous counters: up and down, BCD counters, Ring counter, Johnson counter. Applications of registers and counters.

#### SKILL MAPPING

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>remember</b> the structure of various number systems and its application in digital design. | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>understand</b> the design criterion of combinatory and sequential logic circuits as needed. | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>apply</b> the logic gates to solve the real-world Problem of electronic circuits.           |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO4 | Be able to <b>analyze</b> the memory elements, state table, and state diagrams of the sequential circuit. |                       | 3 |   |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

#### TEACHING LEARNING STRATEGY

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 42                 |

| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for final examination                            | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

#### TEACHING METHODOLOGY

Lecture and discussion, Co-operative and collaborative method, Problem based method

#### COURSE SCHEDULE

| Week      | Topic  | Assessment    |
|-----------|--|---------------|
| 1         | Introduction to number systems and codes         | CT – 1, Final |
| Lecture 1 | Number base conversion                           |               |
| Lecture 2 | Complements and related problems                 |               |
| Lecture 3 | Binary codes                                     |               |
| 2         | Analysis and synthesis of digital logic circuits |               |

|               |   |                |
|---------------|---|----------------|
| Lecture 4     | Basic logic functions   |                |
| Lecture 5     | Boolean algebra   |                |
| Lecture 6     | Boolean algebra   |                |
| 3             | Analysis and synthesis of digital logic circuits              |                |
| Lecture 7     | Combinational logic design                                    |                |
| Lecture 8     | Combinational logic design                                    |                |
| Lecture 9     | Minimization of combinational logic                           |                |
| 4             | Implementation of basic static logic gates in CMOS and BiCMOS | Midterm, Final |
| Lecture 10    | DC characteristics, noise margin, and power dissipation       |                |
| Lecture 11    | Power optimization of basic gates                             |                |
| Lecture 12    | Combinational logic circuits                                  |                |
| 5             | Modular combinational circuit design                          |                |
| Lecture 13    | Pass transistor, Pass gates                                   |                |
| Lecture 14    | Multiplexer   |                |
| Lecture 15    | Demultiplexer   |                |
| 6             | Modular combinational circuit design                          |                |
| Lecture 16    | Implementation of multiplexer and demultiplexer in CMOS       |                |
| Lecture 17    | Decoder   |                |
| Lecture 18    | Encoder   |                |
| 7             | Modular combinational circuit design                          |                |
| Lecture 19    | Comparators   |                |
| Lecture 20    | Binary arithmetic elements and ALU design                     |                |
| Lecture 21    | Binary arithmetic elements and ALU design                     |                |
| Midterm Break |   |                |
| 8             | Programmable logic devices                                    | CT – 2, Final  |
| Lecture 22    | Logic arrays  |                |
| Lecture 23    | Field programmable logic arrays                               |                |
| Lecture 24    | Programmable read-only memory                                 |                |
| 9             | Sequential Circuits   |                |
| Lecture 25    | Different types of latches                                    |                |
| Lecture 26    | SR flip-flops, master-slave                                   |                |
| Lecture 27    | JK flip-flops   |                |
| 10            | Sequential Circuits   |                |
| Lecture 28    | T & D flip-flops  |                |
| Lecture 29    | Flip-flops design using the ASM approach                      |                |
| Lecture 30    | Timing analysis and power optimization of sequential circuits |                |
| 11            | Modular sequential logic circuit design                       |                |
| Lecture 31    | Shift registers   |                |
| Lecture 32    | Parallel I/O shift registers.                                 |                |
| Lecture 33    | Series I/O shift registers and                                |                |
| 12            | Modular sequential logic circuit design                       |                |
| Lecture 34    | Universal shift register                                      |                |
| Lecture 35    | Counters: Introduction  |                |

|   |  |               |                 |         |
|---|--|---------------|-----------------|---------|
| Lecture 36  | Asynchronous counters: up and down       | CT – 3, FINAL |                 |         |
| 13  | Modular sequential logic circuit design  | FINAL         |                 |         |
| Lecture 37  | Synchronous counters: up and down        |               |                 |         |
| Lecture 38  | BCD counters                             |               |                 |         |
| Lecture 39  | Ring counter                             |               |                 |         |

| To learn and familiarize with the basics of digital electronic circuits and utilize digital electronic circuits for practical purposes.  |  |            |                       |               |      |             |         |                    |
| OBJECTIVE  |  |            |                       |               |      |             |         |                    |
| This course consists of two parts. In the first part, students will perform experiments to verify practically the theories and concepts learned in EECE 391. In the second part, students will design simple systems using the principles learned in EECE 391.   |  |            |                       |               |      |             |         |                    |

| SYNOPSIS/RATIONALE   |  |                        |                    |    |        |      |                    |
| To introduce with the most recent technology and to teach students the basic concepts of computer programming.   |  |                        |                    |    |        |      |                    |
| OBJECTIVE  |  |                        |                    |    |        |      |                    |
| 1. To have basic idea about computer organization  |  |                        |                    |    |        |      |                    |
| 2. To understand the basics of computer programming in C/C++.  |  |                        |                    |    |        |      |                    |
| 3. To learn how to think about the problems, their solutions and translating it to programming   |  |                        |                    |    |        |      |                    |
| LEARNING OUTCOMES& GENERIC SKILLS  |  |                        |                    |    |        |      |                    |
| No.  | Course Learning Outcome  |                        | Bloom’s Taxonomy   | CP | CA     | KP   | Assessment Methods |
| CO1  | Explain the difference between object oriented programming language and procedural language                            |                        | C1,C2              | 1  | -      | 1    | T, ASG             |
| CO2  | Apply C/C++ features such as composition of structures, objects, operator overloading, inheritance, polymorphism etc.  |                        | C3, C4             | 3  | -      | 3    | MT, F              |
| CO3  | Evaluate the relative merits of different algorithm to solve and design programming constructs for real world problems |                        | C5,C6              | 4  | -      | 2, 5 | Pr, F              |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile,T – Test ; PR – Project ; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam, MT- Midterm Exam)  |  |                        |                    |    |        |      |                    |
| COURSE CONTENT   |  |                        |                    |    |        |      |                    |
| Fundamentals of computer; Major components of a computer: processor, memory, I/O devices, operating systems; Basic Programming Concepts: object, source, executable code; Program development stages: algorithms and flow charts; Number system: binary, octal, decimal and hexadecimal systems; Structured Programming using C: data types, variables and constants, operators, expressions, control statements: “if else”, “switch”; Loop, function, arrays, strings, pointers, and user defined data types: structure, unions; Input output and files.<br>Object oriented Programming using C++: philosophy of object oriented programming (OOP), advantages of OOP over structured programming, classes and objects, access specifiers, static and non-static members, |  |                        |                    |    |        |      |                    |

Array of objects, constructors, destructors, copy constructor, abstraction, encapsulation, polymorphism: operator overloading, abstract classes, virtual functions, overriding; inheritance: single and multiple inheritance.

### SKILL MAPPING

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | <b>Explain</b> the difference between object oriented programming language and procedural language                            | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | <b>Apply</b> C/C++ features such as composition of structures, objects, operator overloading, inheritance, polymorphism etc.  |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO3 | <b>Evaluate</b> the relative merits of different algorithm to solve and design programming constructs for real world problems |                       | 2 | 3 |   |   |   |   |   |   | 2  |    |    |

(3 – High, 2- Medium, 1-low)

### JUSTIFICATION FOR CO-PO MAPPING

| Mapping  | Level  | Justifications   |
|----------|--------|--|
| CO1-PO1  | High   | Achieving in-depth of knowledge on programming concepts and the features of a programming languages. |
| CO2-PO2  | High   | Developing the skill of analysis to execute proper programming concepts to solve a problem.          |
| CO3-PO2  | Medium | Analysing a problem to find an appropriate solution.   |
| CO3-PO3  | High   | Designing valid algorithm and solve the real life problems using specified programming language.     |
| CO3-PO10 | Medium | Through presentation, the communication skills will be developed.                                    |

### TEACHING LEARNING STRATEGY

| Teaching and Learning Activities | Engagement (hours) |
|----------------------------------|--------------------|

| Outcome Based Education (OBE)  |  |                                  |                       |    |        |         |                    |
| SYNOPSIS/RATIONALE   |  |                                  |                       |    |        |         |                    |
| To introduce the fundamental principles, mechanism of programming skills and develop basic programming skills to program design and development.   |  |                                  |                       |    |        |         |                    |
| OBJECTIVE  |  |                                  |                       |    |        |         |                    |
| 1. To learn basic idea of programming languages.   |  |                                  |                       |    |        |         |                    |
| 2. To learn how to program with C/C++.   |  |                                  |                       |    |        |         |                    |
| 3. To learn how to think about the problems, their solutions and translating it to programming language.   |  |                                  |                       |    |        |         |                    |
| LEARNING OUTCOMES & GENERIC SKILLS   |  |                                  |                       |    |        |         |                    |
| No.  | Course Learning Outcome  |                                  | Bloom's Taxonomy      | CP | CA     | KP      | Assessment Methods |
| CO1  | Practice structured programming language and design algorithm for problems                                   |                                  | C1, C2, A1, A2        | -  | 2      | 1, 3    | PR, T, Q           |
| CO2  | Apply practical knowledge to develop basic programming skills with respect to program design and development |                                  | C3, C4, C6            | -  | 3      | 2, 3, 6 | F, T, ASG          |
| CO3  | Demonstrate good programming style and discuss the impact of style on developing and maintaining programs    |                                  | C4, C6, P6            | -  | 5      | 4, 5    | Q, ASG, F          |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T – Test ; PR – Project ; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)   |  |                                  |                       |    |        |         |                    |
| COURSE CONTENT   |  |                                  |                       |    |        |         |                    |
| Programming concepts, Codeblocks IDE, Input and Output: Standard input and output, Formatted input and output, Data Types, Basic Knowledge: Mathematical problems using printf, scanf, Operators, If, Else if, Switch, Loop, Nested Loop (for loop, while loop, do-while loop), function, arrays, pointers, structure unions. User defined data types. Input output and files. Object oriented Programming using C++: philosophy of object oriented programming (OOP), advantages of OOP over structured programming, classes and objects, access specifiers, static and non-static members, Array of objects, constructors, destructors, copy constructor, abstraction, encapsulation, polymorphism: operator overloading, abstract classes, virtual functions, overriding; inheritance: single and multiple inheritance. |  |                                  |                       |    |        |         |                    |

| SYNOPSIS/RATIONALE   |  |  |                  |                       |               |        |             |                    |
| The main aim of this course is to introduce the students of biomedical engineering to basic concepts in mechanical engineering. These principles and concepts will be later used in courses in biomedical engineering ranging from biomechanics, biomaterials, biofluid mechanics, robotics and artificial organ development   |  |  |                  |                       |               |        |             |                    |
| OBJECTIVE  |  |  |                  |                       |               |        |             |                    |
| <div>1. Be able to understand the basic concepts in solid mechanics</div> <div>2. Be able to apply the concepts of solid mechanics to machine design and analysis</div> <div>3. Be able to describe basic laws of thermodynamics with their applications</div> <div>4. | The course covers basic theory in statics and solid mechanics including stress-strain analysis, bending, torsion, and different types of mechanical testing. These tests are discussed in the lights of machine design and analysis. Emphasis is given on machine failure. The syllabus further includes fundamental concepts of thermodynamics and thermal physics and control theory used in robotics and automation applications. |  |  |                  |                       |               |        |             |                    |

| This course is a hands-on course which introduces introductory level students to basic tooling, prototyping and testing methodologies employed in Mechanical Engineering. The course offers in-depth practical know-how on how to design and fabricate both plastic and metal components, and test the fabricated materials using materials testing methods. Other concepts in mechanical design such as temperature measurement systems, control system and robotics are also covered. |  |                       |              |               |             |    |                    |
| OBJECTIVE   |  |                       |              |               |             |    |                    |
| This course aims to introduce the students to basic molecular biology techniques, their applications and methodologies.   |  |                       |              |               |             |    |                    |

| The course covers the following topics – CAD/CAM techniques, CNC milling and machining, 3D printing, Injection Molding, Casting and lathing techniques, welding and other associated technique in processing metals. Mechanical analysis of these materials is also covered. The course also covers mechanics used in various systems ranging from temperature control and measurement devices to automation and robotics   |  |                       |              |               |             |    |                    |

| PRE-REQUISITE  |  |                 |                       |              |               |    |             |                    |
| --   |  |                 |                       |              |               |    |             |                    |
| CURRICULUM STRUCTURE   |  |                 |                       |              |               |    |             |                    |
| Outcome Based Education (OBE)  |  |                 |                       |              |               |    |             |                    |
| SYNOPSIS/RATIONALE   |  |                 |                       |              |               |    |             |                    |
| The course covers the following modules: Introduction to Biomedical Engineering, Basic Life Science, Biotechnology, Biomaterials, Tissue Engineering, Drug Development and Delivery, Nanotechnology, Biomechanics, Biomedical Implants and Braces, Biosignals, Bioinstrumentation, BioMEMs and biosensors, Biomedical Imaging, Biomedical Image processing, Computational Biology. |  |                 |                       |              |               |    |             |                    |
| OBJECTIVE  |  |                 |                       |              |               |    |             |                    |
| 1. Distinguish and identify key fields and research domains in the field of BME.<br>2. Understand the role of Biomedical Engineers in healthcare and society as a whole.<br>3. Understand how the development of biomedical technology, devices and instrumentation can enhance the quality and precision of healthcare for disease diagnosis, treatment, and prevention.          |  |                 |                       |              |               |    |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |  |                 |                       |              |               |    |             |                    |
| No.  | Course Outcome   |                 | Bloom’s Taxonomy      | PO           | CP            | CA | KP          | Assessment Methods |
| CO1  | Be able to <b>understand</b> the role of Biomedical Engineers in healthcare and society as a whole   |                 | C2                    | 1, 6         | -             | -  | -           | T, MID, F          |
| CO2  | Be able to <b>identify</b> key fields and research domains in the field of BME   |                 | C2                    | 1            | -             | -  | -           | MID, F             |
| CO3  | Be able to <b>analyze</b> how the development of biomedical technology, devices and instrumentation can enhance the quality and precision of healthcare for disease diagnosis, treatment, and prevention |                 | C4                    | 2            | -             | -  | -           | T, F               |

| COURSE SCHEDULE |  |                           |
|-----------------|--|---------------------------|
| Weeks           | Topics   | Assessment                |
| 1               | Introduction to Biomedical Engineering   | CT – 1 and Midterm, Final |
| Lecture 1       | Motivation Course and Introduction   |                           |
| Lecture 2       | Careers in Biomedical Engineering, Current and Future Trends of Biomedical Engineering: Bangladesh and International Perspective |                           |
| 2               | Introduction to Biomedical Engineering   |                           |
| Lecture 3       | Different fields of Biomedical Engineering, Guide to choosing a major to specialize  |                           |
| Lecture 4       | Biomedical research facilities and institutions: Bangladesh and International perspective, Societies, Websites                   |                           |
| 3               | Basic Life Science   |                           |
| Lecture 5       | Introduction to the Chemical basis of life<br>Introductory Biochemistry  |                           |
| Lecture 6       | Introduction to nucleic acids and genes<br>Fundamentals of Molecular Biology   |                           |
| 4               | Biotechnology  |                           |
| Lecture 7       | Introduction to Biotechnology in BME, Examples of DNA, RNA & protein technology and biomedical applications,                     |                           |
| Lecture 8       | Introductory Genetic Engineering, Advances in Genetic Engineering in BME applications  |                           |
| 5               | Biomaterials   | Midterm, Final            |
| Lecture 9       | Introduction to material science in Biomedical Engineering<br>Definition and types of Biomaterials                               |                           |
| Lecture 10      | Biocompatibility: Why is it important?<br>Examples and applications of Biomaterials  |                           |
| 6               | Tissue Engineering   |                           |
| Lecture 11      | Introduction to cell and tissue engineering and regenerative medicine<br>Applications of Tissue Engineering                      |                           |
| Lecture 12      | Functional Tissue Engineering<br>Recent advances and future trends in Tissue Engineering and Regenerative Medicine               |                           |
| 7               | Drug Development and Delivery, Nanotechnology  |                           |
| Lecture 13      | Introduction to Drug Development and Delivery<br>Definitions of Pharmaceuticals and pharmacokinetics                             |                           |
| Lecture 14      | Introduction to Nanotechnology<br>Nanotechnology in biomedicine<br>Nanomaterials used in BME: Examples and Application           |                           |
| MIDTERM         |  |                           |
| 8               | Biomechanics, Biomedical Implants and Braces   | CT – 2, FINAL             |
| Lecture 15      | Definition of Biomechanics<br>Classification of Biomechanics<br>Branches and application of Biomechanics                         |                           |

|            |  |                      |
|------------|--|----------------------|
| Lecture 16 | Introduction to implants and braces<br>Different types of Medical Braces   |                      |
| <b>9</b>   | <b>Biosignals</b>  |                      |
| Lecture 17 | Physiological origins of biosignals<br>Different signals generated in the human body<br>Bioelectric phenomena                            |                      |
| Lecture 18 | Basic Bioinstrumentation<br>Common Equipment used in medical facilities  |                      |
| <b>10</b>  | <b>Bioinstrumentation</b>  |                      |
| Lecture 19 | Introduction to Sensors, Transducers and Actuators<br>Introduction to Biomedical sensors<br>Examples of Biosensors                       |                      |
| Lecture 20 | Different types of biosensors<br>Applications of biosensors  |                      |
| <b>11</b>  | <b>BioMEMs and biosensors, Biomedical Imaging</b>  | <b>CT – 3, FINAL</b> |
| Lecture 21 | Introduction to MEMs and BioMEMs<br>BioMEMs applications and advances  |                      |
| Lecture 22 | Introduction to Biomedical Imaging<br>Common medical imaging modalities: X-ray, CT-scan, MRI, Ultrasound, Nuclear Medicine (SPECT & PET) |                      |
| <b>12</b>  | <b>Biomedical Image processing and Computational Biology</b>   |                      |
| Lecture 23 | Introduction to Image processing<br>The importance of image processing in diagnostics<br>Examples of biomedical image processing         |                      |
| Lecture 24 | Introduction to Bioinformatics and Biostatistics<br>Examples of Computational Biology in BME applications                                |                      |
| <b>13</b>  | <b>Biomedical Optics and Lasers, Telemedicine</b>  |                      |
| Lecture 25 | Introduction to Optics in BME<br>Application of optics in BME  |                      |
| Lecture 26 | Introduction to telehealth or e-health<br>Importance of Telemedicine   |                      |
| <b>14</b>  | <b>Review Week</b>   |                      |
| Lecture 27 | Review Class   | -                    |
| Lecture 28 | Review Class   |                      |

| Outcome Based Education (OBE)  |  |                       |              |               |    |             |                    |
| SYNOPSIS/RATIONALE   |  |                       |              |               |    |             |                    |
| The course covers cells, tissues, organization and functions of tissues and organs of different physiological systems, organ damage and automated repairing system. Learning objectives will be achieved through a combination of lectures. In addition, students will participate in small group discussions of clinical case studies, make group presentations of topic appropriate biomedical devices, and prepare a term paper on the subject of their choice selected from a list of topics generated by the instructor.  |  |                       |              |               |    |             |                    |
| OBJECTIVE  |  |                       |              |               |    |             |                    |
| 1. To provide a foundation in human anatomy appropriate for students of biomedical engineering   |  |                       |              |               |    |             |                    |
| 2. To analyze the structural composition of the human body from cellular to organ levels   |  |                       |              |               |    |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |  |                       |              |               |    |             |                    |

| Human cell: Structure of cell. Structure and functions of cell membrane and nucleus. Types of cellular organelles. Structure and functions of each organelle; Tissues: Types of tissues with their functions; Skeletal System: Components. Exoskeleton/endoskeleton. Bones of axial and appendicular skeleton. Organic and inorganic composition of bone. Functions of each composition. Effect of loss of Organic and inorganic composition. Classification of bones with example. Bones of different regions of the body. Functions of bone/skeleton Types of cartilage with example and functions; Joints: Definition, Classification of joints. Characteristic features of each type with example. Joints of thorax, upper limb, lower limb, Head-neck, vertebral column with types. Line of gravity. Weight transmission through the body; Muscle: Characteristic features and Functions of different types of muscles .Classification of skeletal muscles with example. Regional muscles: characteristic features and action of important muscle such as deltoid ,biceps brachii, triceps, rectus abdominis, gluteal muscles, calf muscles .muscles of back of the trunk; Mediastinum: Definition, Division , contents of mediastinum; Circulatory System: types and |  |                       |              |               |    |             |                    |

characteristic features of each type of circulation; Cardiovascular system: parts and functions of cardiovascular system. Gross feature of pericardium, pericardial sac and heart. Conducting system of heart: location and functions; Lymphatic system: Parts and functions of lymphatic system; Respiratory System: Parts of different zones of respiratory tract. Gross features and functions of pleura and lungs. Differences between right and left principal bronchus. Structure and functions of respiratory membrane. Muscles of respiration; Digestive System: Parts of digestive system. Extension, termination and constrictions of oesophagus. Gross features and functions of different parts of digestive system. Gross features and functions of liver and pancreas. Parts of extra hepatic biliary apparatus; Urinary System: parts of urinary system. Gross features and functions of different parts of urinary system; Reproductive System: Parts of Female and male reproductive system and their functions; Nervous System: Brain: different parts of brain and their functions. Spinal cord: beginning, termination and supports. Cranial nerves: motor, sensory and mixed cranial nerves; Meninges: Different parts of meninges, spaces between. the meninges with their contents; Cavities/ canals: contents of thoracic cavity, abdominal cavity, pelvic cavity, cranial cavity, orbit, vertebral canal; Ear: different parts of ear with their functions; Eye Ball: parts and functions of different layers of eyeball .Refractive media of eyeball; Integumentary System: Parts and functions of skin and skin appendages; Endocrine gland: definition, location, secretion and functions of endocrine glands. Differences between exocrine and endocrine glands.

**SKILL MAPPING**

| No. | Course Learning Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>describe</b> the biochemical and structural organization of the body               | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>understand</b> the functions of the main organs of the body                        | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>understand</b> some basic pathologies and how they affect the function of the body |                       |   | 2 |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 42                 |
| Practical / Tutorial / Studio                                | -                  |
| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for final examination                            | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

| TEACHING METHODOLOGY  |   |                           |
|---|---|---------------------------|
| Lecture and discussion, Co-operative and collaborative method, Problem based method |   |                           |
| COURSE SCHEDULE   |   |                           |
|   |   |                           |
| Week  | Content   | Assessment                |
| 1   | Course introduction   | CT – 1 and Midterm, Final |
| Lecture 1   | Introduction to Anatomy   |                           |
| Lecture 2   | Introduction to Living cells  |                           |
| Lecture 3   | Human cell: type, composition, Cell membrane.   |                           |
| 2   | Cell Biology  |                           |
| Lecture 4   | Nucleus Chromosome & abnormalities.   |                           |
| Lecture 5   | DNA, RNA, Gene  |                           |
| Lecture 6   | Organelles-Type, Mitochondria, ER, Golgi, Lysosome  |                           |
| 3   |   |                           |
| Lecture 7   | Ribosome Cytoskeleton inclusions.   |                           |
|   | Tissues   |                           |
| Lecture 8   | Types of tissues with their functions, Epithelial tissue.   |                           |
| Lecture 9   | Connective tissue.  |                           |
| 4   | Skeletal system   | Midterm, Final            |
| Lecture 10  | Components, types, Bones of axial & appendicular skeleton.<br>Bones- features, classification, composition, blood supply function.<br>Bones of different regions of the body. |                           |
| Lecture 11  | Cartilage: features, types, distributions.  |                           |
| Lecture 12  | Joint: Definition, Classification, Example of joints in different regions, stability of the joint.  |                           |
| 5   | Muscular system   |                           |
| Lecture 13  | Types of muscles, Skeletal muscle.  |                           |
| Lecture 14  | Smooth & cardiac muscle.  |                           |
| Lecture 15  | Regional muscles: features & action   |                           |
| 6   | CVS   |                           |
| Lecture 16  | Mediastinum   |                           |
| Lecture 17  | Cardiovascular system.  |                           |
| Lecture 18  | Features of pericardium sac, Heart, Conducting system of heart.   |                           |
| 7   | Respiratory system.   |                           |
| Lecture 19  | Parts of respiratory system, Trachea, Bronchus, Bronchial tree, Respiratory membrane, RDS.  |                           |
| Lecture 20  | Lungs, pleura, respiratory muscles.   |                           |
|   | Lymphatic system  |                           |
| Lecture 21  | Parts, functions, lymph nodes, spleen, lymphatic vessels.   |                           |
| MIDTERM   |   |                           |
| 8   | Digestive system  |                           |
| Lecture 22  | Parts, extension, features, Oesophagus, Stomach, Intestine.   |                           |
| Lecture 23  | Liver, Biliary apparatus.   |                           |

|   |  |               |               |                 |
|---|--|---------------|---------------|-----------------|
| Lecture 24                                  | Pancreas, Digestive glands.              | CT – 2, FINAL |               |                 |
| 9   | Urinary system                           |               |               |                 |
| Lecture 25                                  | Parts, kidney.                           |               |               |                 |
| Lecture 26                                  | Ureter, Urinary bladder, Urethra.        |               |               |                 |
|   | Reproductive system                      |               |               |                 |
| Lecture 27                                  | Male genital system                      |               |               |                 |
| 10  |  |               |               |                 |
| Lecture 28                                  | Female genital system.                   |               |               |                 |
|   | Nervous system                           |               |               |                 |
| Lecture 29                                  | Brain - Parts                            |               |               |                 |

| BME 105 – Human Anatomy  |  |                 |                       |              |               |    |             |                    |
| CURRICULUM STRUCTURE   |  |                 |                       |              |               |    |             |                    |
| Outcome Based Education (OBE)  |  |                 |                       |              |               |    |             |                    |
| SYNOPSIS/RATIONALE   |  |                 |                       |              |               |    |             |                    |
| The course covers cell, tissues, homeostasis, functions of different physiological systems and their neural and hormonal regulation, contribution to disease development when these physiological functions are dysregulated.  |  |                 |                       |              |               |    |             |                    |
| OBJECTIVE  |  |                 |                       |              |               |    |             |                    |
| 1. To introduce students to a systems approach to the normal physiological processes of the body to maintain homeostasis   |  |                 |                       |              |               |    |             |                    |
| 2. To provide the foundation of information which will allow an increased understanding of the changes seen in pathological states studied further throughout the program  |  |                 |                       |              |               |    |             |                    |
| 3. Biomedical engineers need to prepare their minds for analyzing, quantifying, thinking, and solving problems at the interface of engineering, medicine and biology. This course sets the basic concepts for future interfacing between engineering and physiology. |  |                 |                       |              |               |    |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |  |                 |                       |              |               |    |             |                    |
| No.  | Course Outcome   |                 | Bloom’s Taxonomy      | PO           | CP            | CA | KP          | Assessment Methods |
| CO1  | Be able to <b>understand</b> the functions of the main organs of the body                        |                 | C2                    | 1            | -             | -  | 1           | T, MID, F          |
| CO2  | Be able to <b>understand</b> some basic pathologies and how they affect the function of the body |                 | C2, C4                | 1            | -             | -  | 1           | T, MID, F          |
| CO3  | Be able to <b>explain</b> and <b>analyze</b> the interface of Human biology and engineering      |                 | C2, C4                | 2            | -             | -  | 1           | T, F               |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile,T – Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)  |  |                 |                       |              |               |    |             |                    |
| C1 - Remember  |  | C2 – Understand | C3 – Apply            | C4 - Analyze | C5 – Evaluate |    | C6 - Create |                    |

|--|--|-----------------------|---|---|---|---|---|---|---|---|--------------------|----|----|
| Definition, goal & importance of physiology. Homeostasis: definition. major functional systems, control systems of the body. Cellular Physiology and Blood. Composition and function of blood, Types of blood cell, Erythropoiesis, Anaemia, Phagocytosis, Hemostasis. Cardiovascular Physiology: Properties of cardiac muscle, Generation of cardiac impulse and its conduction in the heart, Cardiac cycle, heart sound, action potential of cardiac muscle, ECG. Gastrointestinal Physiology: Physiological anatomy of gastrointestinal (GI) tract. Local hormones of GIT: name, functions & regulation of secretion. Renal physiology: Kidney, functions of kidneys. Respiration: Mechanism Pulmonary and Alveolar ventilation Pulmonary volumes and capacities and dead space, Respiratory unit and respiratory membrane, Diffusion of Gases through the respiratory membrane, Transport of Oxygen and Carbon dioxide in blood. Thermoregulation. Hormones: Definition, Classification, mechanism of action, regulation of secretion. Nervous system- Neuron- types, receptor and synapse, action potential of nerve fiber. Functional organization and functions of major levels of central nervous system |  |                       |   |   |   |   |   |   |   |   |                    |    |    |
| SKILL MAPPING  |  |                       |   |   |   |   |   |   |   |   |                    |    |    |

| Week  | Content  | Assessment                |
| 1   | Course introduction  | CT – 1 and Midterm, Final |
| Lecture 1   | Motivation & introduction to Human Physiology  |                           |
| Lecture 2   | Organs of Physiological systems and functions  |                           |
| Lecture 3   | Engineering perspective to Human Physiology  |                           |
| 2   | Cells differentiation and Homeostasis  |                           |
| Lecture 4   | Cell to cell interaction or Cell communication   |                           |
| Lecture 5   | Cell differentiation mechanisms  |                           |
| Lecture 6   | Feedback system in Homeostasis   |                           |
| 3   | Tissue   |                           |
| Lecture 7   | Epithelial Tissue  |                           |
| Lecture 8   | Connective Tissue  |                           |
| Lecture 9   | Neural and Muscle tissue   |                           |
| 4   | Blood  | Midterm, Final            |
| Lecture 10  | Composition and function of blood  |                           |
| Lecture 11  | Types of blood cell, Erythropoiesis  |                           |
| Lecture 12  | Anaemia, Phagocytosis, Hemostasis  |                           |
| 5   | Cardiovascular Physiology  |                           |
| Lecture 13  | Properties of cardiac muscle and role in blood flow  |                           |
| Lecture 14  | Generation of cardiac impulse and its conduction in the heart, Cardiac cycle, heart sound, |                           |
| Lecture 15  | Action potential of cardiac muscle, ECG  |                           |
| 6   | Nervous System   |                           |
| Lecture 16  | Classification of nervous system   |                           |
| Lecture 17  | Neurons and Glial cells, Synapses  |                           |
| Lecture 18  | Action potential of nerve fiber  |                           |
| 7   | Immune system  |                           |
| Lecture 19  | Cellular and humoral response to infection   |                           |
| Lecture 20  | T helper cell differentiation, regulation and function                                     |                           |
| Lecture 21  | Crosstalk between Nervous system and Immune system   |                           |
| MIDTERM   |  |                           |
| 8   | Muscular System  |                           |
| Lecture 22  | Function and structure of muscle   |                           |
| Lecture 23  | Neuromuscular junction   |                           |
| Lecture 24  | Muscle contraction   |                           |
| 9   | Respiratory System   |                           |
| Lecture 25  | Function and structure of Lungs  |                           |
| Lecture 26  | Systemic and pulmonary respiration   |                           |
| Lecture 27  | Respiratory regulation   |                           |

| SYNOPSIS/RATIONALE   |   |                 |                       |              |               |    |             |                    |
| This course aims to introduce students to structure and chemistry of different types of molecules and structures found in biological structures. Concepts in enzyme kinetics are covered in depth. Overview of molecules involved in genetics such as nucleic acid structures, and DNA and RNA replication steps are given. The metabolism and oxidation of polysaccharide, lipid, and protein are analyzed in detail. The generation and propagation of bioelectric potentials across membrane channels are also covered. |   |                 |                       |              |               |    |             |                    |
| OBJECTIVE  |   |                 |                       |              |               |    |             |                    |
| 1. To understand the basic concepts of enzyme kinetics   |   |                 |                       |              |               |    |             |                    |
| 2. To describe the structure and mechanisms of nucleic acid, DNA, RNA, and genetic engineering   |   |                 |                       |              |               |    |             |                    |
| 3. To explain and analyze the pathways of oxidation, energy transfer, and metabolism of energy sources and important biomolecules  |   |                 |                       |              |               |    |             |                    |
| 4. To explain and characterize action potential generation and impulse propagation in membranes and nerve fibers   |   |                 |                       |              |               |    |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |   |                 |                       |              |               |    |             |                    |

**COURSE CONTENT**

Concept of fluid continuum, forces acting on a fluid, Surface tension, Statics of fluids: equation of static equilibrium, manometers, forces on submerged surfaces; Fluids in motion: concept of shear stress and classification of fluids; Fluid flow in closed conduits; laminar and turbulent flow; friction factor; control volume analysis: balance of mass, momentum and energy; continuity equation; momentum equation; Bernoulli's principle; Newton's law of viscosity, Navier-Stokes equations, Exact solutions of Navier-stokes equations, Couette flow, Poiseuille flow, the Rayleigh problem.

Basic modes of heat transfer; Introduction to Heat Transfer in Biological System, steady-state heat conduction through a layered surface with different thermophysical properties; Effect of metabolism on heat transfer, transient (unsteady-state) heat conduction; Heat transfer with phase change; Different approaches in bioheat transfer modeling; Thermal regulation of human body; Theoretical determination of thermal properties for biomaterial and experimental techniques; Temperature measuring devices.

**SKILL MAPPING**

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>analyze</b> different equations in biofluid mechanics.  | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>apply</b> different laws of fluid mechanics to physiological flow systems.  |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>explain</b> heat and different heat transfer mechanisms.  | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO4 | Be able to <b>evaluate</b> basic heat transfer problems occur in Biomedical Engineering field involving Conduction, Convection and Radiation for providing appropriate solutions. |                       | 3 |   |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 42                 |
| Practical / Tutorial / Studio                                | -                  |
| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for final examination                            | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

| TEACHING METHODOLOGY  |   |                |
|---|---|----------------|
| Lecture and discussion, Co-operative and collaborative method, Problem based method |   |                |
| COURSE SCHEDULE   |   |                |
| Week  | Topic   | Assessment     |
| 1   | Introduction to Fluid Mechanics   | CT – 1, Final  |
| Lecture 1   | Fluid as a continuum  |                |
| Lecture 2   | Introduction to stress and strain   |                |
| Lecture 3   | Fluid mechanics in physiological flow systems   |                |
| 2   | Control Volume analysis   |                |
| Lecture 4   | Control Volume  |                |
| Lecture 5   | Velocity field and flow rates   |                |
| Lecture 6   | Fluid acceleration and its derivation   |                |
| 3   | Laws of conservation of Mass and Momentum   |                |
| Lecture 7   | Conservation laws in fluid flow   | Midterm, Final |
| Lecture 8   | Fluid Statics   |                |
| Lecture 9   | Boundary conditions in fully formed flows   |                |
| 4   | Buoyancy and Surface Tension  |                |
| Lecture 10  | Derivation of Buoyancy equations  |                |
| Lecture 11  | Surface tension in fluids   |                |
| Lecture 12  | Surfactants and surface tension applications  |                |
| 5   | Newton’s laws of viscosity and the Reynolds Number  |                |
| Lecture 13  | Newton’s laws of viscosity and different categories of fluid  |                |
| Lecture 14  | Types of fluid flows  |                |
| Lecture 15  | Fluid flow in a rectangular cross-section   |                |
| 6   | Navier-Stokes equation  |                |
| Lecture 16  | Fluid flow in a cylindrical cross-section   |                |
| Lecture 17  | Navier-Stokes equation  |                |
| Lecture 18  | Fluid flow example in physiological systems   |                |
| 7   | Bernoulli’s principles  |                |
| Lecture 19  | Bernoulli’s principles  |                |
| Lecture 20  | Review Class  |                |
| Lecture 21  | Review Class  |                |
| Midterm Break   |   |                |
| 8   | Modes of heat transfer  | CT – 2, Final  |
| Lecture 22  | Overview of heat, relation between thermodynamic and heat transfer  |                |
| Lecture 23  | Conduction, Convection, and Radiation   |                |
| Lecture 24  | Basic laws of heat conduction – Fourier’s law   |                |
| 9   | Thermal properties  |                |
| Lecture 25  | Problem solving (Conduction)  |                |
| Lecture 26  | thermal conductivity of biological materials, temperature dependence of thermal conductivity, steady-state heat conduction through a layered surface with different thermophysical properties (e.g. skin) |                |
| Lecture 27  | Effect of metabolism on heat transfer, transient (unsteady-   |                |

|            |  |                      |
|------------|--|----------------------|
|            | state) heat conduction   |                      |
| <b>10</b>  | <b>Heat transfer with phase change</b>   |                      |
| Lecture 28 | Problem solving (Transient heat conduction)  |                      |
| Lecture 29 | Heat transfer with phase change:   |                      |
| Lecture 30 | freezing of pure water, solution, cells and tissues and thawing  | <b>CT – 3, FINAL</b> |
| <b>11</b>  | <b>Different approaches in bioheat transfer modeling</b>   |                      |
| Lecture 31 | The bio-heat transfer equation for mammalian tissue  |                      |
| Lecture 32 | Convection heat transfer and the concept of heat transfer coefficient, individual and overall heat transfer coefficient, critical/optimum insulation thickness, heat transfer through extended surfaces. |                      |
| Lecture 33 | Thermal radiation emission from an ideal body, Radiation exchange between surfaces/bodies.   |                      |
| <b>12</b>  | <b>Mathematical approach of real-world heat transfer problems</b>  |                      |
| Lecture 34 | Problem solving (Convection and radiation)   |                      |
| Lecture 35 | Multimode heat transfer problems   |                      |
| Lecture 36 | Multimode heat transfer problems   | <b>FINAL</b>         |
| <b>13</b>  | <b>Heat transfer in biological system</b>  |                      |
| Lecture 37 | Thermoregulation   |                      |
| Lecture 38 | Metabolism, Thermal comfort  |                      |
| Lecture 39 | Temperature in living systems –hyperthermia and hypothermia.   |                      |
| <b>14</b>  | <b>Temperature Measuring devices</b>   |                      |
| Lecture 40 | Working principle of Thermocouple and Thermistor.  |                      |
| Lecture 41 | Working principle of Resistance temperature detector (RTD), Pyrometer, Infrared thermometer.   |                      |
| Lecture 42 | Review Class   |                      |

| The course is designed to give the basic concepts of Instrumentation involved in medical field and human physiology. In the course, students will be introduced to fundamentals of transducers and sensors, bio-signal measurements and concepts of the instrumentation related to biosignal measurements. The course covers the following modules: generalized medical instrumentation, transducers and sensors, bio amplifier, bio-signal recording systems, bio-signals and their measurement techniques, instrumentation of bio-signal measurements, and patient safety. |   |                       |        |    |    |      |                    |
| OBJECTIVE  |   |                       |        |    |    |      |                    |
| 1. To understand the basics of biomedical instrumentation.<br>2. To learn the principles of transducers and sensors.<br>3. To understand and apply various biomedical measurement techniques.<br>4. To analyze and design various biomedical instrumentation techniques.   |   |                       |        |    |    |      |                    |

| <b>1</b>  | <b>Fundamentals of Medical Instrumentation</b>   | <b>CT – 1, Final</b> |
| Lecture 1 | Introduction to Biomedical Instrumentation   |                      |
| Lecture 2 | Generalized Medical Instrumentation System. Classification of Biomedical Instruments   |                      |
| Lecture 3 | General static characteristics: precision, resolution, accuracy, uncertainty, sensitivity, repeatability, calibration, maintenance, reparability, etc. |                      |
| <b>2</b>  | <b>Fundamentals of Medical Instrumentation</b>   |                      |
| Lecture 4 | Generalized Dynamic Characteristics  |                      |
| Lecture 5 | Generalized Dynamic Characteristics  |                      |
| Lecture 6 | Design process of medical instruments, Commercial medical  |                      |

|                      |   |                       |
|----------------------|---|-----------------------|
|                      | instrumentation development process, Performance requirements of Medical Instrumentation System.                                |                       |
| <b>3</b>             | <b>Principles of Transducers and Sensors</b>  |                       |
| Lecture 7            | The principle, classification, characteristics of Transducers and sensors   |                       |
| Lecture 8            | Displacement, Position, Motion Transducer   |                       |
| Lecture 9            | Thermal, Pressure, Force Transducer   |                       |
| <b>4</b>             | <b>Physiological Transducers and Sensors</b>  |                       |
| Lecture 10           | Photoelectric, Optical, Radiative Transducer  |                       |
| Lecture 11           | Ultrasonic, Electrochemical Transducer  |                       |
| Lecture 12           | Various Biosensors  |                       |
| <b>5</b>             | <b>Bioelectric Signals and Electrodes</b>   |                       |
| Lecture 13           | Biopotential, Laws of membrane biophysics: electrical properties of cells and electrical equivalent model for the cell membrane | <b>Midterm, Final</b> |
| Lecture 14           | Origin of Bioelectric Signals (ECG, EEG, EMG, EOG, ENG, MEG) and their properties   |                       |
| Lecture 15           |   |                       |
| <b>6</b>             | <b>Bioelectric Signals and Electrodes</b>   |                       |
| Lecture 16           | Bio-potential Electrode: Principle, Construction, Circuit model, types  |                       |
| Lecture 17           | Electrode-Skin interface, Polarizations, Artefacts and Interference   |                       |
| Lecture 18           | Electrodes for bioelectric signals. Electrode Arrays, Microelectrodes   |                       |
| <b>7</b>             | <b>Recording Systems, Amplifiers and Signal Conditioning</b>  |                       |
| Lecture 19           | Basic Recording Systems, General Considerations for Signal Conditioners   |                       |
| Lecture 20           | Preamplifiers: Differential Amplifier, Instrumentation Amplifier  |                       |
| Lecture 21           | Carrier Amplifiers, Isolation amplifier, Driving Amplifier  |                       |
| <b>Midterm Break</b> |   |                       |
| <b>8</b>             | <b>Recording Systems, Amplifiers and Signal Conditioning</b>  |                       |
| Lecture 22           | Sources of noise in low-level measurements and reduction techniques   |                       |
| Lecture 23           | Filters for biomedical applications and Frequency Response  |                       |
| Lecture 24           | Analog and Digital Recorders  |                       |
| <b>9</b>             | <b>Instrumentation and Measurements of Biomedical Parameters</b>  | <b>CT – 2, Final</b>  |
| Lecture 25           | Basic Instrumentation and Measurement of ECG  |                       |
| Lecture 26           | Basic Instrumentation and Measurement of ECG  |                       |
| Lecture 27           | Basic Instrumentation and Measurement of PPG, Heart Rate, Heart Rate Variability.   |                       |
| <b>10</b>            | <b>Instrumentation and Measurements of Biomedical Parameters</b>  |                       |
| Lecture 28           | Basic Instrumentation and Measurement of EMG  |                       |

|            |  |                      |
|------------|--|----------------------|
| Lecture 29 | Measurement of Nerve conduction Velocity.  | <b>CT – 3, FINAL</b> |
| Lecture 30 | Basic Instrumentation and Measurement EEG.   |                      |
| <b>11</b>  | <b>Instrumentation and Measurements of Biomedical Parameters</b>   |                      |
| Lecture 31 | Measurement of EOG and Other Biomedical Recorders  |                      |
| Lecture 32 | Measurements of Blood Pressure, sound, flow, and Volume.   |                      |
| Lecture 33 |  |                      |
| <b>12</b>  | <b>Instrumentation and Measurements of Biomedical Parameters</b>   |                      |
| Lecture 34 | Measurements of the Respiratory System: Pressure, Gas-flow,  |                      |
| Lecture 35 | Lung Volume, Gas Concentration   |                      |
| Lecture 36 |  |                      |
| <b>13</b>  | <b>Instrumentation and Measurements of Biomedical Parameters</b>   | <b>FINAL</b>         |
| Lecture 37 | Constant Current Source, Current to Converter  |                      |
| Lecture 38 | Measurement of Bioimpedance  |                      |
| Lecture 39 | Electrical Impedance Tomography (EIT)  |                      |
| <b>14</b>  | <b>Electrical Safety</b>   |                      |
| Lecture 40 | Physiological Effects of Electricity,<br>Important Susceptibility Parameters,<br>Electric Shock Hazards: Macro and Micro |                      |
| Lecture 41 | Basic Approaches to protection against shock, Isolation<br>circuits and Isolation mechanism                              |                      |
| Lecture 42 | Protection: Power Distribution and Equipment Design,<br>Safety codes and Standards for Electromedical Equipment          |                      |

| SYNOPSIS/RATIONALE               |  |   |                       |    |    |        |                    |
|                                  |  | To teach the students the basic concepts and principles of numerical methods and statistics. It is targeted to provide a basic foundation for mathematics areas such as various numerical approximations of linear equations and DEs etc. Finally, this course is designed to develop the capability of solving real-life problems through Numerical methods and giving statistical interpretation and comments.  |                       |    |    |        |                    |
| OBJECTIVE                        |  |   |                       |    |    |        |                    |
|                                  |  | 1. Be able to understand the basic knowledge of various numerical approximations for solving equations.<br>2. Be able to provide a statistical probability of any real-life problem.<br>3. Implement numerical methods and statistical concepts in solving different engineering problems.  |                       |    |    |        |                    |
| COURSE OUTCOMES & GENERIC SKILLS |  |   |                       |    |    |        |                    |

**SKILL MAPPING**

| No.   | Course Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|---|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|   |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1   | Be able to <b>understand</b> different numerical methods.  | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2   | Be able to <b>identify</b> and <b>describe</b> statistical data and probability concepts.                                |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO3   | Be able to <b>Apply</b> numerical methods, sampling theory and different statistical tests to solve real-world problems. |                       |   |   |   | 3 |   |   |   |   |    |    |    |
| (Numerical method used for mapping which indicates 3 as high, 2 as medium and 1 as low level of matching) |  |                       |   |   |   |   |   |   |   |   |    |    |    |

**Justification for CO-PO mapping:**

| Mapping    | Corresponding Level of matching | Justifications   |
|------------|---------------------------------|--|
| CO1-PO1(a) | 3                               | The knowledge of mathematics has to be applied to understand different numerical methods in the field of engineering study.                        |
| CO2-PO1(a) | 3                               | In order to identify and describe statistical phenomena and probability distribution, using the knowledge of mathematics and sciences is required. |
| CO3-PO1(a) | 3                               | Interpret various numerical methods and statistical phenomena to solve DEs using them, the knowledge of mathematics is required.                   |

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities         | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning                    |                    |
| Lecture                                  | 42                 |
| Practical / Tutorial / Studio            | -                  |
| Student-Centred Learning                 | -                  |
| Self-Directed Learning                   |                    |
| Non-face-to-face learning                | 42                 |
| Revision of the previous lecture at home | 21                 |
| Preparation for final examination        | 21                 |

|   |  |          |
|---|--|----------|
| Formal Assessment   |  |          |
| Continuous Assessment   |  | 2        |
| Final Examination   |  | 3        |
| Total   |  | 131      |
| TEACHING METHODOLOGY  |  |          |
| Lecture and Discussion, Co-operative and Collaborative Method, Problem Based Method |  |          |
| COURSE SCHEDULE   |  |          |
| Week 1  | Numerical Analysis   | CT 1     |
| Class 1   | Numerical Solution of Algebraic and Transcendental Equations: Introduction                             |          |
| Class 2   | Bisection method   |          |
| Class 3   | Newton-Raphson method  |          |
| Week 2  | Numerical Analysis   |          |
| Class 4   | Solution of system of linear equations using direct method   |          |
| Class 5   | Solution of system of linear equations using iterative method  |          |
| Class 6   | Interpolation: Finite differences, Forward differences   |          |
| Week 3  | Numerical Analysis   |          |
| Class 7   | Interpolation: Finite differences, backward differences  |          |
| Class 8   | Central differences, Divided differences, Difference table   |          |
| Class 9   | Central differences, Divided differences, Difference table   |          |
| Week 4  | Numerical Analysis   | CT 2     |
| Class 10  | difference of polynomial   |          |
| Class 11  | Newton interpolation formula   |          |
| Class 12  | Newton forward interpolation formula, Newton backward interpolation formula                            |          |
| Week 5  | Numerical Analysis   |          |
| Class 13  | Numerical Integration  |          |
| Class 14  | Numerical solution of ordinary differential equations  |          |
| Class 15  | Application of numerical methods in Biomedical Engineering   |          |
| Week 6  | Statistics   |          |
| Class 16  | Introduction to statistics, correlation: Scatter diagrams, Correlation co-efficient                    |          |
| Class 17  | Rank correlation, Correlation ratio, Theorems on correlations.   |          |
| Class 18  | Regression Analysis: Linear regression   |          |
| Week 7  | Statistics   | Mid Term |
| Class 19  | Least square method Equation of the line of regression   |          |
| Class 20  | Regression co-efficient, Curve fitting   |          |
| Class 21  | Probability: Mathematical and statistical definitions, Additive and multiplicative rule of probability |          |
| Week 8  | Statistics   |          |
| Class 22  | Conditional probability, Joint Probability, Baye’s theorem   |          |
| Class 23  | Conditional probability, Joint Probability, Baye’s theorem   |          |
| Class 24  | Random Variables: Discrete and continuous random variables,  |          |
| Week 9  | Statistics   |          |
| Class 25  | Random Variable: Probability mass function   |          |
| Class 26  | Probability density function, Cumulative distribution functions  |          |
| Class 27  | Mathematical expectation.  |          |
| Week 10   | Statistics   |          |

|                |  |             |
|----------------|--|-------------|
| Class 28       | <b>Discrete Probability Distribution:</b> Binomial distribution,                                   | <b>CT 3</b> |
| Class 29       | Negative binomial distribution, Geometric distribution   |             |
| Class 30       | Poisson's distribution.  |             |
| <b>Week 11</b> | <b>Statistics</b>  |             |
| Class 31       | <b>Continuous Probability Distribution:</b> Normal distribution: Introduction                      |             |
| Class 32       | <b>Continuous Probability Distribution:</b> Normal distribution: Theory                            |             |
| Class 33       | <b>Continuous Probability Distribution:</b> Normal distribution: Example                           |             |
| <b>Week 12</b> | <b>Statistics</b>  |             |
| Class 34       | Exponential distribution, Chi-square distribution, t and F- distributions                          |             |
| Class 35       | <b>Sampling Distribution:</b> Population, Sample mean, Sample variance                             |             |
| Class 36       | Central limit theorem, Sampling distribution from a normal population.                             |             |
| <b>Week 13</b> | <b>Statistics</b>  |             |
| Class 37       | <b>Test of Hypothesis:</b> Statistical hypothesis, Level of significance, Type I and Type II error |             |
| Class 38       | One tailed and two tailed tests, Tests for proportions.  |             |
| Class 39       | Effect size Cohen's D method   |             |
| <b>Week 14</b> | <b>Statistics</b>  |             |
| Class 40       | Analysis of Variance (ANOVA): One tailed and Two tailed tests                                      |             |
| Class 41       | Analysis of Variance: Example  |             |
| Class 42       | Statistical applications in Biomedical Engineering   |             |

**ASSESSMENT STRATEGY**

| CURRICULUM STRUCTURE  |  |                       |              |               |             |    |                    |
| Outcome Based Education (OBE)   |  |                       |              |               |             |    |                    |
| SYNOPSIS/RATIONALE  |  |                       |              |               |             |    |                    |
| The course covers the following modules: Structure of solids, characterization of biomaterials, metallic implant materials, ceramic implant materials, synthetic polymeric materials, composite biomaterials and material-tissue interactions, sterilization of biomaterials, structure and function of natural biomaterials.   |  |                       |              |               |             |    |                    |
| OBJECTIVE   |  |                       |              |               |             |    |                    |
| 1. To introduce students to different implants, prosthetic and functional materials, investigate the materials' properties including their designs and applications.  |  |                       |              |               |             |    |                    |
| 2. To investigate both synthetic and natural polymers, and explore biomaterial-tissue interaction in detail with a focus on applications in tissue engineering and cardiology.  |  |                       |              |               |             |    |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |  |                       |              |               |             |    |                    |
| No.   | Course Outcome   | Bloom's Taxonomy      | PO           | CP            | CA          | KP | Assessment Methods |
| CO1   | Be able to identify different types of biomaterials  | C2                    | 2            | -             | -           | 1  | T, MID             |
| CO2   | Be able to <b>understand</b> and <b>analyze</b> the properties of biomaterials   | C2                    | 1            | -             | -           | 1  | T, MID, F          |
| CO3   | Be able to <b>comprehend</b> the interactions of cell and tissues with biomaterials based on biomaterial properties and reactivity | C5                    | 4,2          | -             | 3           | 1  | MID, F             |
| CO4   | Be able to <b>design</b> and <b>apply</b> different types of biomaterials to solve biomedical problems                             | C3                    | 3            | -             | -           | 1  | T, F               |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T – Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)  |  |                       |              |               |             |    |                    |
| C1 - Remember   | C2 – Understand  | C3 - Apply            | C4 - Analyze | C5 – Evaluate | C6 - Create |    |                    |
| COURSE CONTENT  |  |                       |              |               |             |    |                    |
| <b>The structure of solid:</b> Structure of solids overview, classification of solids, classification of solids based on structure, lattice imperfections and defects   |  |                       |              |               |             |    |                    |
| <b>Properties and Characterization of Materials:</b> Thermal properties phase diagrams, strengthening by heat treatments, surface properties and adhesion. Electrical properties, optical properties, x-ray absorption, acoustic and ultrasonic properties, density and porosity and diffusion properties, XPS, XRD, spectroscopy, SFM, AFM, optical characterization of biomaterials |  |                       |              |               |             |    |                    |
| <b>Metallic Biomaterials:</b> Stainless steels, co-based alloys, Ti and Ti-based alloys, dental metals, other metals, corrosion of metallic implants.   |  |                       |              |               |             |    |                    |
| <b>Ceramic Implant Materials:</b> Structural property relationship of ceramics, aluminum oxides (alumina), zirconium  |  |                       |              |               |             |    |                    |

oxides (zirconia), calcium phosphate, glass ceramics, other ceramics, carbons, deterioration of ceramics.

**Synthetic Polymeric Material:** Basic structure, classifications (thermoplasts, thermoset, and elastomers), different physical and mechanical properties, and various uses of biomaterials. Natural polymeric materials, biodegradable polymers, applications and functions

**Composites as Biomaterials:** Structure, mechanics of composites, applications of composite biomaterials, biocompatibility of composite, biomaterials.

**Biological response to biomaterials:** biocompatibility, toxicity of biomaterials, host response of biological materials to biomaterials, sterilization of biomaterials, applications of biomaterials in cardiology and tissue engineering

#### SKILL MAPPING

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to identify different types of biomaterials   |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>understand</b> and <b>analyze</b> the properties of biomaterials  | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>investigate</b> the interactions of cell and tissues with biomaterials based on biomaterial properties and reactivity |                       | 3 |   | 3 |   |   |   |   |   |    |    |    |
| CO4 | Be able to <b>design</b> and <b>apply</b> different types of biomaterials to solve biomedical problems                              |                       |   | 3 |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

#### TEACHING LEARNING STRATEGY

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|

| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for final examination                            | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

#### TEACHING METHODOLOGY

Lecture and discussion, Co-operative and collaborative method, Problem based method

#### COURSE SCHEDULE

| Week | Content   | Assessment |
|------|---|------------|
| 1    | Course Introduction and the structure of solids |            |

|            |  |                              |
|------------|--|------------------------------|
| Lecture 1  | Motivation & introduction to biomaterials  | CT – 1 and Midterm,<br>Final |
| Lecture 2  | Overview of classification of Solids   |                              |
| Lecture 3  | Overview of structure of solids  |                              |
| 2          | Structure solids   |                              |
| Lecture 4  | Classification of solids according to structure  |                              |
| Lecture 5  | Lattice imperfections and defects  |                              |
| Lecture 6  | Mechanical testing methods, tensile and compression properties of biomaterials                     |                              |
| 3          | Mechanical properties and characterization of biomaterials   |                              |
| Lecture 7  | Shear properties, stress-strain properties and analysis of biomaterials                            |                              |
| Lecture 8  | Bending properties, time independent properties, creep and fatigue of biomaterials                 |                              |
| Lecture 9  | Phase Diagrams 1   | Midterm, Final               |
| 4          | Thermal processing and properties of biomaterials  |                              |
| Lecture 10 | Phase Diagrams 2   |                              |
| Lecture 11 | Thermal properties and heat treatment of biomaterials  |                              |
| Lecture 12 | Surface properties and adhesion  |                              |
| 5          | Physical Properties of Biomaterials  |                              |
| Lecture 13 | Electrical and optical properties of biomaterials  |                              |
| Lecture 14 | X-ray diffraction, ultrasonic properties, density, porosity and diffusion properties               |                              |
| Lecture 15 | X-ray diffraction, Bragg’s Law, crystal structure determination                                    |                              |
| 6          | Characterization of biomaterials   |                              |
| Lecture 16 | XPS, spectroscopy techniques   |                              |
| Lecture 17 | AFM, SFM, SEM, and optical techniques  |                              |
| Lecture 18 | Different types of metallic biomaterials - stainless steel, Co-Cr alloy, Titanium, dental implants |                              |
| 7          | Metallic biomaterials  |                              |
| Lecture 19 | Different types of metallic biomaterials - stainless steel, Co-Cr alloy, Titanium, dental implants |                              |
| Lecture 20 | Properties, fabrication and corrosion of metallic implants   |                              |
| Lecture 21 | Revision   |                              |
| MIDTERM    |  |                              |
| 8          | Ceramic Biomaterials   | CT – 2, FINAL                |
| Lecture22  | Structural Property relationship of ceramics   |                              |
| Lecture 23 | Properties and functions of alumina, zirconia, calcium phosphate                                   |                              |
| Lecture 24 | Glass ceramics, other ceramics, degradation of ceramics  |                              |
| 9          | Polymeric biomaterials   |                              |
| Lecture 25 | Structure, classification, properties and processing of polymeric materials                        |                              |
| Lecture 26 | Structure, classification, properties and processing of polymeric materials                        |                              |
| Lecture 27 | Natural polymeric materials – function and properties  |                              |
| 10         | Polymeric biomaterials   |                              |

|   |  |               |                 |         |
|---|--|---------------|-----------------|---------|
| Lecture 28  | Hydrogel – properties, functions and applications                | CT – 3, FINAL |                 |         |
| Lecture 29  | Biodegradable polymers – properties, functions and applications  |               |                 |         |
| Lecture 30  | Polymeric biomaterials in biosensor applications                 |               |                 |         |
| 11  | Composite Biomaterials and Biocompatibility                      |               |                 |         |
| Lecture 31  | Structure of composite biomaterials                              |               |                 |         |
| Lecture 32  | Composite biomaterials – functions, properties, and applications |               |                 |         |
| Lecture 33  | Biocompatibility and toxicity of biomaterials                    |               |                 |         |
| 12  | Biomaterial interactions with proteins/tissues                   |               |                 |         |
| Lecture 34  | Protein-biomaterial interactions                                 |               |                 |         |
| Lecture 35  | Cell/tissue-biomaterial interactions                             |               |                 |         |
| Lecture 36  | Cell/tissue-biomaterial interactions                             |               |                 |         |
| 13  | Biological response to biomaterials                              |               |                 |         |
| Lecture 37  | Host response (biological response) to biomaterials              |               |                 |         |
| Lecture 38  | Toxicity and immune response                                     |               |                 |         |
| Lecture 39  | Sterilization methods and handling of biomaterials               |               |                 |         |
| 14  | Applications of biomaterials                                     |               |                 |         |
| Lecture 40  | Tissue engineering scaffolds and stem cell engineering           |               |                 |         |
| Lecture 41  | Cardiac applications of biomaterials                             |               |                 |         |
| Lecture 42  | Revision   |               |                 |         |
| FINAL EXAMINATION   |  |               |                 |         |
| ASSESSMENT STRATEGY   |  |               |                 |         |

| SYNOPSIS/RATIONALE  |  |                       |              |               |             |     |                    |
| This course aims to introduce the fundamental concepts and methods for the characterization and analysis of digital signal and systems with a particular emphasis on the understanding of the basic Biomedical signals and systems.   |  |                       |              |               |             |     |                    |
| OBJECTIVE   |  |                       |              |               |             |     |                    |
| 1. To provide the knowledge about the different processing techniques regarding signal and systems  |  |                       |              |               |             |     |                    |
| 2. To equip students skilled to apply the knowledge of signal processing to solve the real life problems related to Biosignal.  |  |                       |              |               |             |     |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |  |                       |              |               |             |     |                    |
| No.   | Course Outcome   | Bloom's Taxonomy      | PO           | CP            | CA          | KP  | Assessment Methods |
| CO1   | Be able to <b>understand</b> signals in the time, frequency, Laplace, and Z domains                    | C2                    | 1            | 1             | -           | 1,3 | T, F               |
| CO2   | Be able to <b>comprehend</b> the fundamental signal processing techniques                              | C2                    | 1            | 1,3           | -           | 1,3 | T, F               |
| CO3   | Be able to <b>acquire</b> popular biomedical signals and their fundamental features'                   | C2                    | 2            | 1             | -           | 1   | MID, F             |
| CO4   | Be able to <b>design</b> and <b>analyze</b> the basic processing techniques for the Biomedical signals | C3, C4                | 3            | 1,3           | -           | 1,3 | T, F               |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T – Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)  |  |                       |              |               |             |     |                    |
| C1 - Remember   | C2 - Understand  | C3 - Apply            | C4 - Analyze | C5 - Evaluate | C6 - Create |     |                    |
|   |  |                       |              |               |             |     |                    |

| CURRICULUM STRUCTURE  |   |                       |        |     |    |     |                    |
| Outcome Based Education (OBE)   |   |                       |        |     |    |     |                    |
| SYNOPSIS/RATIONALE  |   |                       |        |     |    |     |                    |
| The course aims to teach students about various diagnostic and therapeutic equipment. The course covers the following modules: cardiac equipment, neurological equipment, skeletal muscular equipment, respiratory equipment, diathermy, drug delivery systems, incubator, some special diagnostic techniques and patient monitoring.                 |   |                       |        |     |    |     |                    |
| OBJECTIVE   |   |                       |        |     |    |     |                    |
| The objective of the course is to make the students familiarized with the medical devices used in healthcare for diagnostic and therapeutic purposes. Understand the principles of operation and identify the application areas. Also to make the students able to analyze, troubleshoot, repair, and calibrate diagnostic and therapeutic equipment. |   |                       |        |     |    |     |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |   |                       |        |     |    |     |                    |

| Lecture 17  | Analysis of EMG waveforms, Fatigue characteristics                           |                |
| Lecture 18  | EMG Machine: Principle, construction, calibration                            |                |
| 7   | Skeletal muscular equipment  |                |
| Lecture 19  | Nerve-Muscle stimulators: Principles, types, applications                    |                |
| Lecture 20  |  |                |

|                             |   |               |                 |            |
|-----------------------------|---|---------------|-----------------|------------|
| Lecture 21                  | EMG Bio-Feedback Instrumentation  |               |                 |            |
| Midterm Break               |   |               |                 |            |
| 8                           | Respiratory Equipment   | CT – 2, Final |                 |            |
| Lecture 22                  | Ventilator: Principle, construction, types, modes of operation, testing and calibration.    |               |                 |            |
| Lecture 23                  |   |               |                 |            |
| Lecture 24                  |   |               |                 |            |
| 9                           | Respiratory Equipment   |               |                 |            |
| Lecture 25                  | Anesthesia Machine: Principle, construction, application and safety measures.               |               |                 |            |
| Lecture 26                  |   |               |                 |            |
| Lecture 27                  | Oxygen Therapy, High Flow Nasal Cannula (HFNC): Principle and applications                  |               |                 |            |
| 10                          | Respiratory Equipment   |               |                 |            |
| Lecture 28                  | CPAP, BiPAP: Principle and applications   |               |                 |            |
| Lecture 29                  |   |               |                 |            |
| Lecture 30                  | Nebulizer, Inhaler, Aspirator: Principle and applications                                   |               |                 |            |
| 11                          | Diathermy and Thermography  | CT – 3, FINAL |                 |            |
| Lecture 31                  | Thermography – Recording and clinical application.  |               |                 |            |
| Lecture 32                  | Short wave diathermy, Ultrasonic diathermy, Microwave diathermy: Principle and applications |               |                 |            |
| Lecture 33                  | Electro-surgery machine: Principle, applications, risk factors                              |               |                 |            |
| 12                          | Special Diagnostic Techniques   |               |                 |            |
| Lecture 34                  | Principles of Cryogenic technique and application   |               |                 |            |
| Lecture 35                  | Endoscopy: Principle, and application   |               |                 |            |
| Lecture 36                  | Laparoscopy, Colonoscopy: Principle, and application  |               |                 |            |
| 13                          | Drug delivery systems, Incubator and Warmer   | FINAL         |                 |            |
| Lecture 37                  | Syringe and Infusion pumps: Principle, application  |               |                 |            |
| Lecture 38                  | Infant Incubator and baby warmers: Principle, application                                   |               |                 |            |
| Lecture 39                  |   |               |                 |            |
| 14                          | Patient monitoring and Clinical Equipment Setup   |               |                 |            |
| Lecture 40                  | Patient monitoring systems: Bedside Patient monitors, Central Monitors                      |               |                 |            |
| Lecture 41                  | ICU/CCU/HDU Equipment Setup   |               |                 |            |
| Lecture 42                  | Operation Theater Equipment Setup   |               |                 |            |
| ASSESSMENT STRATEGY         |   |               |                 |            |

| SYNOPSIS/RATIONALE   |                                    |  |                       |        |    |    |    |            |
| The goal of this course is to expose students to the field of embedded systems and to provide a knowledge foundation which will enable students to pursue a career in relevant fields. Key concepts of hardware-software interfacing control architectures, debugging, and communication protocols will be discussed in this course. Students will be familiar with different firmware architectures and can apply their knowledge in relevant fields such as; clinical device development and robotics in healthcare. |                                    |  |                       |        |    |    |    |            |
| OBJECTIVE  |                                    |  |                       |        |    |    |    |            |
| 1. To identify and understand fundamentals of microprocessors, microcontrollers, communication protocols and embedded firmware.  |                                    |  |                       |        |    |    |    |            |
| 2. To apply the fundamental concepts of embedded engineering   |                                    |  |                       |        |    |    |    |            |
| 3. To analyze the various firmware architectures and systems   |                                    |  |                       |        |    |    |    |            |
| 4. To evaluate various large scale embedded systems  |                                    |  |                       |        |    |    |    |            |
| COURSE OUTCOMES & GENERIC SKILLS   |                                    |  |                       |        |    |    |    |            |
| No.  | Course Outcome                     |  | Bloom's               | PO     | CP | CA | KP | Assessment |

| 1  |  | Motivation and course introduction  |   |   |   |   |   |   |   | CT – 1, Final |    |                    |    |  |
| Lecture 1  |  | Introduction to Embedded Engineering, Chronological development of Firmware and Embedded Technology, Importance of Embedded Engineering in Healthcare |   |   |   |   |   |   |   |               |    |                    |    |  |
| Lecture 2  |  | Review of Bit and Bytes, Subtractions, Multiplications, Division, Boolean Algebra   |   |   |   |   |   |   |   |               |    |                    |    |  |
| Lecture 3  |  | Review of Logic Gates, Combinational Circuits, Decoders, Encoders   |   |   |   |   |   |   |   |               |    |                    |    |  |
| 2  |  | Introduction to microprocessors   |   |   |   |   |   |   |   |               |    |                    |    |  |
| Lecture 4  |  | Microprocessor Fundamentals, Types of Processors  |   |   |   |   |   |   |   |               |    |                    |    |  |
| Lecture 5  |  | Processor architecture  |   |   |   |   |   |   |   |               |    |                    |    |  |
| Lecture 6  |  | Simple As Possible (SAP) Architecture   |   |   |   |   |   |   |   |               |    |                    |    |  |

|                      |  |                       |
|----------------------|--|-----------------------|
| <b>3</b>             | <b>Microprocessor Fundamentals</b>   | <b>Midterm, Final</b> |
| Lecture 7            | Overview of 8086 Microprocessor  |                       |
| Lecture 8            | 8086 Microprocessor Instruction sets   |                       |
| Lecture 9            | 8086 Microprocessor Addressing Modes   |                       |
| <b>4</b>             | <b>Basic Embedded Firmware</b>   |                       |
| Lecture 10           | Assembly Language – 1  |                       |
| Lecture 11           | Assembly Language – 2  |                       |
| Lecture 12           | Assembly Language – 3  |                       |
| <b>5</b>             | <b>Higher Level Embedded Firmware</b>  |                       |
| Lecture 13           | Introduction to Data Types, Variable, Operators, If-else, Lists, Functions and basic syntax                            |                       |
| Lecture 14           | Object-Oriented Programming  |                       |
| Lecture 15           | Object-Oriented Programming  |                       |
| <b>6</b>             | <b>Communication Protocols</b>   |                       |
| Lecture 16           | Intro to Computer Networking and Networking Layers, Bus Interface, I/O Hardware and Interface, Peripheral Interfacing, |                       |
| Lecture 17           | Wired Communication Protocols (USB, UART, I2C, SPI, CAN)   |                       |
| Lecture 18           | Wireless Communication Protocols (Bluetooth, GSM, ZigBEE, BLE and others)  |                       |
| <b>7</b>             | <b>Sensors, Actuators and Interfacing</b>  |                       |
| Lecture 19           | Introduction to Sensors and Actuators, Fundamentals of Sensors and Different Types of Sensors                          |                       |
| Lecture 20           | Fundamentals of Actuators and Different Types of Actuators, Interfacing of Sensors and Actuators                       |                       |
| Lecture 21           | Interfacing of Sensors and Actuators (Continued)   |                       |
| <b>Midterm Break</b> |  |                       |
| <b>8</b>             | <b>Overview of Memory</b>  | <b>CT – 2, Final</b>  |
| Lecture 22           | Introduction to Memory, Memory Architecture  |                       |
| Lecture 23           | Memory Hierarchy, Memory Interface   |                       |
| Lecture 24           | Virtual Memory, DMA (Direct Memory Access) and DMA Controller  |                       |
| <b>9</b>             | <b>Threads, Interrupts, Timer and Multitasking</b>   |                       |
| Lecture 25           | Basic Concepts and Applications of Threads, Overview of Interrupts   |                       |
| Lecture 26           | Introduction to Programmable Timer fundamentals, Fundamental Concepts of Programmable Interrupt Controller,            |                       |
| Lecture 27           | Overview of Multitasking in Microprocessors and Embedded Systems   |                       |
| <b>10</b>            | <b>Microcontrollers Basics, Microcontroller Architectures and Application</b>  |                       |
| Lecture 28           | AVR and ARM Microcontrollers   |                       |
| Lecture 29           | Overview PIC Microcontroller   |                       |
| Lecture 30           | Overview PIC Microcontroller (continued)   |                       |
| <b>11</b>            | <b>Advance Firmware Architecture and Advance Concepts in Embedded Engineering</b>                                      |                       |
| Lecture 31           | Reset Circuit , Watchdog Timer, Reliable Architecture in   |                       |

|   |   |               |                 |          |
|---|---|---------------|-----------------|----------|
|   | Firmware and system design approaches   | CT – 3, FINAL |                 |          |
| Lecture 32  | Reliable Architecture in Firmware and system design approaches (continued)                      |               |                 |          |
| Lecture 33  | Operating Systems Basics, RTOS, Virtual Machines  |               |                 |          |
| 12  | FPGA Boards   |               |                 |          |
| Lecture 34  | Introduction to FPGA Boards   |               |                 |          |
| Lecture 35  | Fundamentals of FPGA Boards   |               |                 |          |
| Lecture 36  | Applications of FPGA Boards   |               |                 |          |
| 13  | Distributed Systems, Artificial Intelligence and IoT Architecture in Embedded Systems           | FINAL         |                 |          |
| Lecture 37  | Clustering, Master-Slave Topology, Multithread Processors                                       |               |                 |          |
| Lecture 38  | IoT Architecture and Web Assembly   |               |                 |          |
| Lecture 39  | AI Algorithms in microcontrollers and microprocessors   |               |                 |          |
| 14  | Embedded Systems in Healthcare, R&D work process and Production Line Designing                  |               |                 |          |
| Lecture 40  | Current Trends in Embedded Systems in Healthcare  |               |                 |          |
| Lecture 41  | Overview of Robotics in Healthcare, Advanced Surgical Procedures and Medical Device Development |               |                 |          |
| Lecture 42  | R&D work Process and Production Line Designing  |               |                 |          |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 7                  |
| Practical / Tutorial / Studio                                | 35                 |
| Student-Centered Learning                                    | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | -                  |
| Revision of the previous and (or) subsequent lecture at home | 15                 |
| Preparation for final examination                            | 10                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 1                  |
| Lab Test   | 1                  |
| Quiz   | 0.75               |
| Viva   | 0.25               |
| Total  | 70                 |

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Week | Lecture Topics   | Assessment                               |
|------|--|--|
| 1    | Implementation of Boolean functions using logic gates                                      | Report, Assignment, Lab Test, Quiz, Viva |
| 2    | Interfacing digital lighting display (Dot-matrix) with microprocessor                      |  |
| 3    | Stepper Motor Control With 8086 Microprocessor   |  |
| 4    | Introduction to Arduino Development Board and Stepper Motor Control with Arduino Uno       |  |
| 5    | Introduction to Raspberry Pi and Video Feed Capture with Raspberry Pi                      |  |
| 6    | USB Communication Between Arduino and Raspberry Pi and Interfacing with Temperature Sensor |  |

|  |  |         |                              |                 |
|--|--|---------|------------------------------|-----------------|
| 7  | PCB Designing in Proteus, Discussion on Project Proposal                                       |         |                              |                 |
| Midterm Break  |  |         |                              |                 |
| 8  | Introduction To IoT: Bluetooth Communication and Storing of Data with Raspberry Pi and Arduino |         | Report, Lab Test, Quiz, Viva |                 |
| 9  | Biosignal Acquisition and Display with Arduino and Raspberry Pi Cluster                        |         |                              |                 |
| 10   | Implementation of Threads, Programmable Timer with Raspberry Pi-Arduino Cluster and LEDs       |         |                              |                 |
| 11   | Introduction to 16bit PIC Microcontroller and LED Switching with 16 bit PIC Microcontroller    |         |                              |                 |
| 12   | Project Presentation   |         |                              |                 |
| 13   | Lab Test   |         |                              |                 |
| 14   | Quiz and Viva  |         |                              |                 |

| COURSE CONTENT  |  |                       |              |               |    |             |                    |
| <b>Origin of Medical Images and Processing:</b> Medical image sources, Properties, Processing challenges, Processing steps, Image representation, Hardware, and software requirements. <b>Image as Two-dimensional (2D) systems:</b> Image as a 2D signal, 2D sequences, and systems, Vector-space image representation, superposition and convolution, 2D Sampling theory, Image quantization, Image perception, Smoothing & Sharpening, Spatial filtering, Quality measures. <b>Image Transforms:</b> 2D Fourier Transform, Sine and Cosine transformation, Hadamard transformation, Slant, and KL transformation. <b>Colors in Image:</b> Concept of monochrome and color images, Color Fundamentals, Color Models, Pseudo Color Image Processing, Basics of Full-Color Image Processing, Color Transformations. |  |                       |              |               |    |             |                    |

**Image Enhancement:** Image Enhancement in spatial domain: Gray Level Transformations, Histogram Processing, Smoothing and Sharpening Spatial Filters; Image Enhancement in the frequency domain: Smoothing Frequency-Domain Filters, Sharpening Frequency Domain Filters. **Image Reconstruction:** Reconstruction concept of medical images, Image reconstruction in X-Ray, Image reconstruction in CT, Fourier slice theorem, Back projection algorithm for parallel projection data, Filtered-back projection algorithm, Image Reconstruction in Magnetic Resonance Imaging, Image Reconstruction in Ultrasound Imaging. **Image segmentation:** Feature Extraction, Edge Detection, Boundary Extraction, Region Representation, Moment Representation, Shape Features, Scene Matching Image Segmentation, Threshold-based segmentation, Region growing segmentation, Active contour model for segmentation.

**SKILL MAPPING**

| No. | Course Learning Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>understand</b> different steps of biomedical image processing steps and their applications in clinical diagnosis.    | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>understand</b> the fundamental image processing technique.   | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>apply</b> the basic image processing techniques with the modified form to medical images.                            |                       |   |   |   | 3 |   |   |   |   |    |    |    |
| CO4 | Be able to <b>analyze</b> the medical image related to real-life problems and possible processing techniques for aiding diagnosis. |                       | 3 |   |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 42                 |
| Practical / Tutorial / Studio                                | -                  |
| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for final examination                            | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Week      | Topic  | Assessment |
|-----------|--|------------|
| 1         | <b>Origin of Medical Images and Processing</b> |            |
| Lecture 1 | Medical image sources, Properties              |            |

|               |  |                |
|---------------|--|----------------|
| Lecture 2     | Processing challenges, Processing steps                  | CT – 1, Final  |
| Lecture 3     | Image representation, hardware and software requirements |                |
| 2             | Image as Two-dimensional (2D) systems                    |                |
| Lecture 4     | Image as a 2D signal, 2D sequences, and systems          |                |
| Lecture 5     | Vector-space image representation                        |                |
| Lecture 6     | superposition and convolution                            |                |
| 3             | Image as Two-dimensional (2D) systems                    |                |
| Lecture 7     | 2D Sampling theory, Image quantization, Image perception |                |
| Lecture 8     | Smoothing & Sharpening, Quality measures                 |                |
| Lecture 9     | Spatial filtering  | Midterm, Final |
| 4             | Image Transforms   |                |
| Lecture 10    | 2D Fourier Transform                                     |                |
| Lecture 11    | Sine transformation                                      |                |
| Lecture 12    | Cosine transformation                                    |                |
| 5             | Bio-image compression algorithms                         |                |
| Lecture 13    | Hadamard Transformation                                  |                |
| Lecture 14    | Slant Transform  |                |
| Lecture 15    | KL Transform   |                |
| 6             | Colors in Image  |                |
| Lecture 16    | Concept of monochrome and color images                   |                |
| Lecture 17    | Color Fundamentals                                       |                |
| Lecture 18    | Color Models   |                |
| 7             | Colors in Image  |                |
| Lecture 19    | Pseudo Color Image Processing                            |                |
| Lecture 20    | Basics of Full-Color Image Processing                    |                |
| Lecture 21    | Color Transformations                                    |                |
| Midterm Break |  |                |
| 8             | Image Enhancement (Spatial Domain)                       | CT – 2, Final  |
| Lecture 22    | Gray Level Transformations, Histogram Processing         |                |
| Lecture 23    | Smoothing Spatial Filters                                |                |
| Lecture 24    | Sharpening Spatial Filters                               |                |
| 9             | Image Enhancement (Frequency Domain)                     |                |
| Lecture 25    | Smoothing Frequency-Domain Filters                       |                |
| Lecture 26    | Smoothing Frequency-Domain Filters                       |                |
| Lecture 27    | Sharpening Frequency Domain Filters                      |                |
| 10            | Image Reconstruction                                     |                |
| Lecture 28    | Reconstruction concept of medical images                 |                |
| Lecture 29    | Image reconstruction in X-Ray                            | CT – 3, FINAL  |
| Lecture 30    | Image reconstruction in CT                               |                |
| 11            | Image Reconstruction                                     |                |
| Lecture 31    | Fourier slice theorem                                    |                |
| Lecture 32    | Back projection algorithm for parallel projection data   |                |
| Lecture 33    | Filtered-back projection algorithm                       |                |
| 12            | Image Reconstruction                                     |                |
| Lecture 34    | Image Reconstruction in Magnetic Resonance Imaging       |                |
| Lecture 35    | Image Reconstruction in Ultrasound Imaging               |                |

|  |  |      |                 |         |
|--|--|------|-----------------|---------|
| Lecture 36   | Feature Extraction                           |      | FINAL           |         |
| 13   | Image segmentation                           |      |                 |         |
| Lecture 37   | Edge Detection, Boundary Extraction          |      |                 |         |
| Lecture 38   | Region Representation, Moment Representation |      |                 |         |
| Lecture 39   | Shape Features, Threshold-based segmentation |      |                 |         |
| 14   | Image segmentation                           |      |                 |         |
| Lecture 40   | Scene Matching Image Segmentation            |      |                 |         |
| Lecture 41   | Region growing segmentation,                 |      |                 |         |
| Lecture 42   | Active contour model for segmentation        |      |                 |         |
| ASSESSMENT STRATEGY  |  |      |                 |         |

| SYNOPSIS/RATIONALE   |   |                       |              |               |             |      |                    |
| This course covers the major topics/subtopics that include introduction to biomechanics, tissue mechanics, joint biomechanics, movement mechanics, dynamics to human motion, linear and angular kinematics, examples in biomechanics, modern kinematic measurement techniques, applications of human motion analysis, introduction to viscoelasticity.   |   |                       |              |               |             |      |                    |
| OBJECTIVE  |   |                       |              |               |             |      |                    |
| 1. To describe the fundamental of biomechanics.<br>2. To Study the deformability, strength, viscoelasticity of bone and flexible tissues, modes of loading and failure.<br>3. To describe the types and mechanics of skeletal joints.<br>4. To describe movement precisely, using well defined terms (kinematics) and also to consider the role of force in movement (kinetics).<br>5. To teach students the unique features of biological flows, especially constitutive laws and boundaries.<br>6. To consider the mechanics of orthopedic implants and joint replacement, artificial heart valve, mechanical properties of cardiovascular and respiratory mechanics |   |                       |              |               |             |      |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |   |                       |              |               |             |      |                    |
| No.  | Course Outcome  | Bloom's Taxonomy      | PO           | CP            | CA          | KP   | Assessment Methods |
| CO1  | To <b>understand</b> various properties of hard tissues (bone) & soft tissues (articular cartilage, tendons and ligaments) and identify the appropriate model to demonstrate mechanical behavior. | C2                    | 1            | 1             | -           | 1    | T, F               |
| CO2  | To <b>analyze</b> the biomechanics of different human joints and also the forces at a skeletal joint for various static and dynamic human activities.   | C4                    | 2            | 1             | -           | 1, 3 | T, F               |
| CO3  | To <b>explain</b> the mechanics of moving systems and familiarity with human anatomy to competently analyze gross movement and dynamics of the human body.  | C2                    | 1            | 1             | -           | 1, 3 | MID, F             |
| CO4  | To <b>evaluate</b> the design requirements of medical implants based on human anatomy and biological responses to biomaterials.   | C5                    | 4            | 1             | -           | 1    | T, F               |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T – Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)   |   |                       |              |               |             |      |                    |
| C1 - Remember  | C2 - Understand   | C3 - Apply            | C4 - Analyze | C5 - Evaluate | C6 - Create |      |                    |

**COURSE CONTENT****Kinematic and Kinetic Concepts:**

Forms of motion, Standard reference terminology, Joint movement terminology, Force, moment, couples, loads on the human body, Equations of static equilibrium, Structural idealization applications in biomechanics, stress and strain analysis.

**Muscle and Movement:**

Skeletal muscle morphology, Isotonic versus isometric construction, Muscles constitutive modelling, whole muscle mechanics parallel versus pinnate muscle types, Factors affecting muscular force generation; Muscular strength, power, endurance; muscle and bone interactions.

**Basic Statics and Movements at Specific Joints:**

Shoulder and Shoulder Girdle; Elbow and Forearm; Wrist and Hand; Trunk and Spine; Hip, Knee, Ankle; Patterns of movement; Structural and Functional Analysis.

**Linear and Angular Kinematics of Human Movement:**

Overview of linear kinematics, Acceleration, Projectile motion analysis, Linear and angular motion relationship, Modern kinematics measurement techniques.

**Linear and Angular Kinetics of Human Movement:**

Kinetic law of motion, Angular analogues of Newton's law of motion, Modern kinetics measurement techniques, Application of human motion.

**Human Movement in Fluid Medium:**

Nature of fluid, Viscoelasticity, Buoyancy, Drag, Lift force, Propulsion in fluid medium.

**SKILL MAPPING**

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | To <b>understand</b> various properties of hard tissues (bone) & soft tissues (articular cartilage, tendons and ligaments) and identify the appropriate model to demonstrate mechanical behavior. | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | To <b>analyze</b> the biomechanics of different human joints and also the forces at a skeletal joint for various static and dynamic human activities.   |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO3 | To <b>explain</b> the mechanics of moving systems and familiarity with human anatomy to competently analyze gross movement and dynamics of the human body.  | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO4 | To <b>evaluate</b> the design requirements of medical implants based on human anatomy and biological responses to biomaterials.   |                       |   |   | 3 |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

| <b>TEACHING LEARNING STRATEGY</b>   |   |                       |
|---|---|-----------------------|
| Teaching and Learning Activities  |   | Engagement (hours)    |
| Face-to-Face Learning   |   |                       |
| Lecture   |   | 42                    |
| Practical / Tutorial / Studio   |   | -                     |
| Student-Centred Learning  |   | -                     |
| Self-Directed Learning  |   |                       |
| Non-face-to-face learning   |   | 42                    |
| Revision of the previous and (or) subsequent lecture at home                        |   | 21                    |
| Preparation for final examination   |   | 21                    |
| Formal Assessment   |   |                       |
| Continuous Assessment   |   | 2                     |
| Final Examination   |   | 3                     |
| Total   |   | 131                   |
| <b>TEACHING METHODOLOGY</b>   |   |                       |
| Lecture and discussion, Co-operative and collaborative method, Problem based method |   |                       |
| <b>COURSE SCHEDULE</b>  |   |                       |
| Week  | Topic   | Assessment            |
| <b>1</b>  | <b>Kinematic and Kinetic Concepts</b>   | <b>CT – 1, Final</b>  |
| Lecture 1   | Forces, moments, couples, mechanical loads and effects of loading                           |                       |
| Lecture 2   | Forms of motion, Anatomical reference position, planes and axes, Joint movement terminology |                       |
| Lecture 3   | Equations of static equilibrium   |                       |
| <b>2</b>  | <b>Kinematic and Kinetic Concepts</b>   |                       |
| Lecture 4   | Structural idealization applications in biomechanics  |                       |
| Lecture 5   | Structural idealization applications in biomechanics  |                       |
| Lecture 6   | Basics of stress and strain analysis  |                       |
| <b>3</b>  | <b>Muscles and Movement</b>   |                       |
| Lecture 7   | Skeletal muscle morphology, Properties of Musculotendinous units                            |                       |
| Lecture 8   | Isotonic versus isometric construction  | <b>Midterm, Final</b> |
| Lecture 9   | Muscles constitutive modelling, Whole muscle mechanics parallel versus pinnate muscle types |                       |
| <b>4</b>  | <b>Muscles and Movement</b>   |                       |
| Lecture 10  | Factors affecting muscular force generation, Muscular strength, power, endurance            |                       |
| Lecture 11  | Common muscle injuries  |                       |
| Lecture 12  | Muscle and bone interactions  |                       |
| <b>5</b>  | <b>Human Joint Articulation</b>   |                       |
| Lecture 13  | Joint Architecture, stability and flexibility   |                       |
| Lecture 14  | Common Joint injuries, Introduction to the biomechanics of human upper extremity            |                       |

|                     |  |               |
|---------------------|--|---------------|
| Lecture 15          | Structure, movement and loads on the shoulder                                      |               |
| 6                   | Joint Movement Analysis of Upper Extremity   |               |
| Lecture 16          | Structure, movement and loads on the elbow and wrist                               |               |
| Lecture 17          | Complex upper extremity mathematical problems                                      |               |
| Lecture 18          | Complex upper extremity mathematical problems                                      |               |
| 7                   | Joint Movement Analysis of Lower Extremity   |               |
| Lecture 19          | Structure, movement and loads on the hip, knee and ankle                           |               |
| Lecture 20          | Complex lower extremity mathematical problems for structural analysis              |               |
| Lecture 21          | Complex lower extremity mathematical problems for structural analysis              |               |
| Midterm Break       |  |               |
| 8                   | Joint Movement Analysis of Spine   | CT – 2, Final |
| Lecture 22          | Biomechanics and structural analysis of human spine                                |               |
| Lecture 23          | Muscle of spine, loads on spine, Spine injuries                                    |               |
| Lecture 24          | Mathematical analysis of muscle joint and muscle-bone interaction                  |               |
| 9                   | Linear kinematics  |               |
| Lecture 25          | Linear kinematics quantities, Acceleration   |               |
| Lecture 26          | Kinematics of projectile motion analysis   |               |
| Lecture 27          | Kinetic equation of motion   |               |
| 10                  | Linear kinematics  |               |
| Lecture 28          | Mechanical behavior of bodies in contact   |               |
| Lecture 29          | Equilibrium and human movement   |               |
| Lecture 30          | Complex problem regarding equilibrium and human movement                           |               |
| 11                  | Angular Kinematics   | CT – 3, FINAL |
| Lecture 31          | Overview of angular kinematics of human movement                                   |               |
| Lecture 32          | Angular kinematics relationships, comparison between angular and linear kinematics |               |
| Lecture 33          | Resistance to angular acceleration, angular momentum                               |               |
| 12                  | Angular Kinematics   |               |
| Lecture 34          | Angular analogues of Newton’s laws of motion                                       |               |
| Lecture 35          | Modern kinematic measurement techniques  |               |
| Lecture 36          | Applications of human motion analysis  |               |
| 13                  | Human Movement in Fluid Medium   | FINAL         |
| Lecture 37          | Nature of fluid, Fluid properties, Buoyancy  |               |
| Lecture 38          | Skin friction, drag coefficient, form and wave drag                                |               |
| Lecture 39          | Lift force and propulsion in fluid medium  |               |
| 14                  | Review Class   |               |
| Lecture 40          | Review and Mathematical problem solving  |               |
| Lecture 41          |  |               |
| Lecture 42          |  |               |

| CO2  | Be able to <b>analyze</b> a complex problem and using engineering tools and knowledge would be able to formulate a suitable solution. | C4                    | 2, 5         | 1             | -           | 1, 2 | T, Q, R, ASG       |
| CO3  | Be able to <b>design</b> and develop devices and equipment to improve healthcare facilities.  | C6                    | 3            | 1, 3          | -           | 5    | T, Q, R            |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile, T – Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)   |   |                       |              |               |             |      |                    |
| C1 - Remember  | C2 - Understand   | C3 - Apply            | C4 - Analyze | C5 - Evaluate | C6 - Create |      |                    |
| COURSE CONTENT   |   |                       |              |               |             |      |                    |
| <p>This course exposes students to the entire design process from problem definition to prototype validation. The course is organized like a biomedical engineering company, with projects sponsored by real clients from the Medical School, Dental School, College of Engineering research labs, and local industry. This course comprises six main components:</p> <ol style="list-style-type: none"><li>1. Problem Definition – Students will generate/ be assigned a project idea and expected to decompose the problem, generate design specifications, and plan out the project.</li><li>2. Concept Generation and Evaluation – Students will use brainstorming and decision evaluation tools to generate and evaluate solutions to reach a design consensus.</li><li>3. Detailed Design – Students will generate a paper design of their proposed prototype including device specifications, key materials and components, detailed drawings, and principles of operation with all choices justified and supported through proof-of-concept.</li></ol> |   |                       |              |               |             |      |                    |

4. Fabrication and Validation – Students will fabricate and conduct testing of their prototype, assess the degree to which the prototype meets the design specifications, and recommend design modifications to improve the prototype.
5. Project Management – Students will create and update a project timeline, budget, design history file, and maintain engineering notebooks throughout all phases of the project.
6. Technical Communication – Students will be required to describe, explain, and support the progress and solutions of their project at all phases of the design process.

**SKILL MAPPING**

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>apply</b> modern engineering tools to develop projects to enhance healthcare facilities.                                |                       |   | 2 |   | 3 |   |   |   |   |    |    |    |
| CO2 | Be able to <b>analyze</b> a complex problem and using engineering tools and knowledge would be able to formulate a suitable solution. |                       | 2 |   |   | 3 |   |   |   |   |    |    |    |
| CO3 | Be able to <b>design</b> and develop devices and equipment to improve healthcare facilities.  |                       |   | 3 |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 7                  |
| Practical / Tutorial / Studio                                | 35                 |
| Student-Centered Learning                                    | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | -                  |
| Revision of the previous and (or) subsequent lecture at home | 15                 |
| Preparation for final examination                            | 10                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 1                  |
| Lab Test   | 1                  |
| Quiz   | 0.75               |
| Viva   | 0.25               |
| Total  | 70                 |

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

| COURSE SCHEDULE   |  |         |               |  |
|---|--|---------|---------------|--|
| Week  | Lecture Topics   |         |               | Assessment                               |
| 1   | Introduction, Course overview, Evaluation process, Form group  |         |               | Report, Assignment, Lab Test, Quiz, Viva |
| 2   | Discussion on few proposed projects and project scope  |         |               |  |
| 3   | Discussion on project idea and design consideration  |         |               |  |
| 4   | Idea based project presentation, budget and timeline<br>Define need and project scope, design requirements |         |               |  |
| 5   | Model generation, usability testing, engineering analysis  |         |               |  |
| 6   | Finalization of design with detailed drawing and computational validation testing                          |         |               |  |
| 7   | Finalization of Project and start the prototype fabrication process  |         |               |  |
| Midterm Break   |  |         |               |  |
| 8   | Prototype fabrication review and troubleshooting   |         |               | Report, Lab Test, Quiz, Viva             |
| 9   | Prototype verification and validation testing  |         |               |  |
| 10  | Prototype verification and validation testing  |         |               |  |
| 11  | Draft Report Submission and Review   |         |               |  |
| 12  | Project Submission with complete documentation (Drawing, user manual, report and design history file)      |         |               |  |
| 13  | Presentation   |         |               |  |
| 14  | Project Showcasing   |         |               |  |
| ASSESSMENT STRATEGY   |  |         |               |  |

| Training in industry, hospital or healthcare organization will be conducted for a duration of 4 weeks at the end of level 3 term 2. Students will learn how to apply their skills as a biomedical engineer in a professional setting and will undergo extensive training in preparation for their role in the industry, hospital, or healthcare facilities. The training can be arranged by the department. |  |                       |              |               |    |             |                    |

| CURRICULUM STRUCTURE   |   |                       |              |               |    |             |                    |
| Outcome Based Education (OBE)  |   |                       |              |               |    |             |                    |
| SYNOPSIS/RATIONALE   |   |                       |              |               |    |             |                    |
| The course aims to teach students about various diagnostic and therapeutic equipment. The course covers the following modules: Catheterization Laboratory equipment, Echo technique equipment, Heart-lung machine, Intra-aortic Balloon Pump, Haemodialysis machine, Ophthalmic equipment, Equipment for eye, Radiotherapy equipment, laboratory equipment, maintenance, repair of medical equipment and current trends in clinical engineering. |   |                       |              |               |    |             |                    |
| OBJECTIVE  |   |                       |              |               |    |             |                    |
| The objective of the course is to make the students understand the medical devices used in healthcare for diagnostic and therapeutic purposes. Understand the principles of operation and identify the application areas. Also to make the students able to analyze, troubleshoot, repair, and calibrate diagnostic and therapeutic equipment. Students will also learn about current trends in this field.                                      |   |                       |              |               |    |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |   |                       |              |               |    |             |                    |

Ultrasound

**Heart Lung Machine:** Need for the unit, functioning of bubble, disc type and membrane type oxygenators, finger pump, roller pump, electronic monitoring of functional parameter.

**Intra-Aortic Balloon Pump (IABP):** procedures, applications and risks, principles and constructions, Difference with Extracorporeal membrane oxygenator (ECMO)

**Haemodialysis Machine:** Artificial kidney and dialyzers, membranes for Haemodialysis machine, principles and construction, Lithotripsy

**Ophthalmic Equipment:** Keratometer, Tonometer, Auto Refractor, Ophthalmoscope, Retinoscope, Optical Coherence Tomography (OCT)

**Equipment for Ear:** Pure tone audiometry, Diagnostic Audiometer, Hearing Aid, Cochlear Implants, Otoscope

**Radiotherapy Equipment:** Overview of clinical radiotherapy and radiation sources, Brachy Therapy: HDR/LDR, Equipment, Treatment Planning, Co-60 Units, Cyclotron, Small-field radiotherapy equipment and techniques, Electron beam therapy, Kilovoltage radiotherapy, Linear Accelerator (LINAC)

**Laboratory Equipment:** Spectrophotometer, Colorimeter, High-performance liquid chromatography (HPLC) machine, Polymerase chain reaction (PCR) machine, Clinical Flame Photometer: Principle and applications, Blood Gas Analyzer, Blood Cell Counter: Principles and applications

Electrolyte Analyzer: Principle and application

**Maintenance, Repair and Current Trends in Clinical Engineering:** Maintenance and Repair of Medical Devices, Current trends in clinical engineering

| <b>SYNOPSIS/RATIONALE</b>   |  |                       |        |    |    |     |                    |
| This course covers the topics that include mass, momentum and heat transport, Basic hemodynamic, equations of continuity and motion, molecular mechanics of fluid and electrolyte transport, Shear stress, mass transfer and metabolism in organs and tissues, compartmental models for pharmacokinetic analyses, analysis of blood oxygenators, Unsteady-state heat transfer modes and laws, heat transfer coefficient, heat transfer inside the body, heat transfer between body and surrounding; Analogy equations relating momentum, energy and mass transfer.        |  |                       |        |    |    |     |                    |
| <b>OBJECTIVE</b>  |  |                       |        |    |    |     |                    |
| <div>1. This course aims to develop students' basic engineering knowledge of momentum, mass, and heat transfer in integrated form through an array of examples and analysis from biological systems (cellular, tissue, organ levels) and from the design of medical devices.</div> <div>2. Application of these principles, using quantitative methods based on fundamental physical laws, to solve problems in biology, of clinical significance, and problems in the design and development of medical devices, implants, including tissue-engineered constructs.</div> |  |                       |        |    |    |     |                    |

| Week          | Topic   | Assessment     |               |
|---------------|---|----------------|---------------|
| 1             | Introduction to transport fundamentals                                | CT – 1, Final  |               |
| Lecture 1     | Overview of the transport process and cellular transport              |                |               |
| Lecture 2     | Physiological transport systems                                       |                |               |
| Lecture 3     | Application of transport process in disease pathology                 |                |               |
| 2             | Conservation Relation and Momentum Balance                            |                |               |
| Lecture 4     | An overview of hemodynamics and boundary conditions                   |                |               |
| Lecture 5     | Application of momentum balance                                       |                |               |
| Lecture 6     | Blood rheology and blood flow   |                |               |
| 3             | Fluid Transport, Dimensional Analysis and Scaling                     |                |               |
| Lecture 7     | Equation of conservation of mass and linear momentum                  |                |               |
| Lecture 8     | Navier-stokes equation in three dimensions                            |                |               |
| Lecture 9     | Dimensional analysis and dimensionless group                          |                |               |
| 4             | Methods for Analyzing Complex Physiological Flow                      | Midterm, Final |               |
| Lecture 10    | Integral form of conservation of mass and momentum                    |                |               |
| Lecture 11    | Application of Bernoulli’s equation                                   |                |               |
| Lecture 12    | Boundary layer theory and flow separation                             |                |               |
| 5             | Fluid Flow in the Circulatory System                                  |                |               |
| Lecture 13    | Flow through a series of distensible tubes                            |                |               |
| Lecture 14    | Flow in specific artery and arterial fluid dynamics                   |                |               |
| Lecture 15    | Heart valve hemodynamics  |                |               |
| 6             | Mass Transport in Biological System                                   |                |               |
| Lecture 16    | Conservation and constitutive relation                                |                |               |
| Lecture 17    | Diffusion, Diffusion coefficient, Steady-state and unsteady diffusion |                |               |
| Lecture 18    | Diffusion-limited reaction  |                |               |
| 7             | Diffusion with Convection or Electrical Potential                     |                |               |
| Lecture 19    | Fick’s law, Dimensional analysis, Electrolyte transport               |                |               |
| Lecture 20    | Diffusion and convection, mass transfer coefficients                  |                |               |
| Lecture 21    | Microscopic and macroscopic mass balances across membranes            |                |               |
| Midterm Break |   |                |               |
| 8             | Transport in Porous Media   |                | CT – 2, Final |
| Lecture 22    | Porosity, Tortuosity, and Volume fraction                             |                |               |
| Lecture 23    | Fluid flow in porous media  |                |               |
| Lecture 24    | Solute transport in porous media                                      |                |               |
| 9             | Transvascular Transport   |                |               |
| Lecture 25    | Pathway for transendothelial transport                                |                |               |
| Lecture 26    | Rates of transvascular transport                                      |                |               |
| Lecture 27    | Phenomenological constants  |                |               |

|   |   |      |                      |        |
|---|---|------|----------------------|--------|
| <b>10</b>   | <b>Transport of Gases between Blood and Tissue</b>  |      |                      |        |
| Lecture 28  | Oxygen-Hemoglobin equilibria  |      |                      |        |
| Lecture 29  | Dynamics of oxygenation of blood and oxygen delivery in tissue<br>Nitric oxide production and transport in tissue |      |                      |        |
| Lecture 30  |   |      |                      |        |
| <b>11</b>   | <b>Mass transfer in Kidney</b>  |      | <b>CT – 3, FINAL</b> |        |
| Lecture 31  | Mechanism of transmembrane transport  |      |                      |        |
| Lecture 32  | Quantitative analysis of Glomerular Filtration and tubular reabsorption   |      |                      |        |
| Lecture 33  | Whole-organ approach to renal modeling  |      |                      |        |
| <b>12</b>   | <b>Drug Transport in Solid Tumors</b>   |      |                      |        |
| Lecture 34  | Introduction to drug delivery in cancer treatment   |      |                      |        |
| Lecture 35  | Analysis of transvascular and interstitial fluid transport  |      |                      |        |
| Lecture 36  | Interstitial hypertension in solid tumor  |      |                      |        |
| <b>13</b>   | <b>Drug Transport in Solid Tumors, and Pharmacokinetics</b>   |      |                      |        |
| Lecture 37  | Analysis of interstitial transport of solutes   |      |                      |        |
| Lecture 38  | Consideration in Pharmacokinetics   |      | <b>FINAL</b>         |        |
| Lecture 39  | Compartment models in pharmacokinetic analysis  |      |                      |        |
| <b>14</b>   | <b>Transport in Organs and Organisms</b>  |      |                      |        |
| Lecture 40  | Physiologically based pharmacokinetic models  |      |                      |        |
| Lecture 41  | Review  |      |                      |        |
| Lecture 42  | Review  |      |                      |        |

| SYNOPSIS/RATIONALE               |   |  |        |    |    |      |                    |
|                                  | The aim of this course is to present the knowledge of molecular cell biology to engineering students especially students of Biomedical Engineering. The course emphasizes conceptual appreciation of the molecular interplays which are the basis of "chemical processes" in living systems. The objective of the course is to provide students with a comprehensive and concise overview of biological science with emphases on its relationship with biomedical engineering. The course covers the following modules: DNA, chromosomes, RNA, protein, genetics, gene expression |  |        |    |    |      |                    |
| OBJECTIVES                       |   |  |        |    |    |      |                    |
|                                  | 1. To be able to impart basic knowledge on life at molecular level<br>2. To be able to find the molecular reasons of physiological disorders<br>3. To be able to suggest molecular solutions of physiological disorders   |  |        |    |    |      |                    |

|   | CO2  | To <b>apply</b> the principles of molecular methods in a design to sense, study or control a biological system.                                     |                       |   | 2 |   |   |   |   |   |   |    |    |    |
|   | CO3  | To <b>analyze</b> a design involving a quantitative molecular application used in a research, biomedicine or healthcare setting.                    |                       |   |   | 3 |   |   |   |   |   |    |    |    |
| (Numerical method used for mapping which indicates 3 as high, 2 as medium and 1 as low level of matching) |  |   |                       |   |   |   |   |   |   |   |   |    |    |    |
| Justification for <b>CO-PO</b> mapping  |  |   |                       |   |   |   |   |   |   |   |   |    |    |    |
| Mapping   | Corresponding Level of matching  | Justifications  |                       |   |   |   |   |   |   |   |   |    |    |    |
| CO1-PO1   | 3  | The knowledge of basic mathematics, science and bioengineering has to be applied to describe molecular functions of cells in human body.            |                       |   |   |   |   |   |   |   |   |    |    |    |
| CO2-PO3   | 2  | Knowledge of contemporary issues regarding the molecular mechanisms of diseases or knowledge of molecular solutions of these diseases are required. |                       |   |   |   |   |   |   |   |   |    |    |    |
| CO3-PO2   | 2  | Knowledge of analyzing biological data, knowledge of identifying problems are instrumental to ensure better health.                                 |                       |   |   |   |   |   |   |   |   |    |    |    |
| TEACHING LEARNIN STRATEGY   |  |   |                       |   |   |   |   |   |   |   |   |    |    |    |

| Teaching and Learning Activities         | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning                    |                    |
| Lecture                                  | 42                 |
| Practical/Tutorial/Studio                | -                  |
| Student-Centered Learning                | -                  |
| Self-Directed Learning                   |                    |
| Non-Face-to Face Learning                | 42                 |
| Revision of the previous lecture at home | 21                 |
| Preparation for the final examination    | 21                 |
| Formal Assessment                        |                    |
| Continuous assessment                    | 2                  |
| Final Examination                        | 3                  |
| Total                                    | 131                |

**TEACHING METHODOLOGY**

Lecture and Discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Week       | Content  | Assessment    |
|------------|--|---------------|
| <b>1</b>   | <b>Course introduction</b>   | <b>CT – 1</b> |
| Lecture 1  | Introduction to molecular biology  |               |
| Lecture 2  | Molecular perception of living beings  |               |
| Lecture 3  | Application in Biomedical Engineering  |               |
| <b>2</b>   | <b>The Structure of DNA</b>  |               |
| Lecture 4  | Components of nucleic acid based on different structure  |               |
| Lecture 5  | Significance of 5' to 3'   |               |
| Lecture 6  | Supercoiling of DNA  |               |
| <b>3</b>   | <b>Genomic Organization: from Nucleotides to Chromatin</b>   |               |
| Lecture 7  | Eukaryotic genome  |               |
| Lecture 8  | Bacterial genome   |               |
| Lecture 9  | RNA based genome   |               |
| <b>4</b>   | <b>The Versatility of RNA and Gene to Protein</b>  | <b>CT-2</b>   |
| Lecture 10 | Description of different structures of RNA   |               |
| Lecture 11 | The Central dogma  |               |
| Lecture 12 | Description of different protein structures and identification                                       |               |
| <b>5</b>   | <b>DNA replication</b>   |               |
| Lecture 13 | Principles of replication process  |               |
| Lecture 14 | Replication licensing: DNA only replicates once per cell cycle Duplex unwinding at replication forks |               |
| Lecture 15 | Proofreading and termination   |               |
| <b>6</b>   | <b>DNA repair and recombination</b>  |               |
| Lecture 16 | Types of mutations and their phenotypic consequences   |               |
| Lecture 17 | General classes of DNA damage  |               |
| Lecture 18 | Repair of single base changes and structural distortions by removal of DNA damage                    |               |

|                             |   |         |               |                 |
|-----------------------------|---|---------|---------------|-----------------|
|                             | Double-strand break repair by removal of DNA damage   |         |               |                 |
| 7                           | Recombinant DNA technology and molecular cloning  |         |               |                 |
| Lecture 19                  | Cutting and joining DNA   |         |               |                 |
| Lecture 20                  | Molecular cloning   |         |               |                 |
| Lecture 21                  | Restriction fragment length polymorphism (RFLP)<br>DNA sequencing   |         |               |                 |
|                             |   |         |               |                 |
| 8                           | Tools for analyzing gene expression   |         | Midterm       |                 |
| Lecture 22                  | Reporter genes  |         |               |                 |
| Lecture 23                  | In vitro mutagenesis  |         |               |                 |
| Lecture 24                  | Analysis at the level of gene transcription: RNA expression and localization<br>Analysis at the level of translation: protein expression and localization |         |               |                 |
| 9                           | Transcription   |         |               |                 |
| Lecture 25                  | Mechanism of transcription  |         |               |                 |
| Lecture 26                  | Transcription factors   |         |               |                 |
| Lecture 27                  | Transcriptional coactivators and corepressors   |         |               |                 |
| 10                          | Epigenetics and monoallelic gene expression   |         |               |                 |
| Lecture 28                  | Epigenetic markers  |         |               |                 |
| Lecture 29                  | Genomic imprinting  |         |               |                 |
| Lecture 30                  | Epigenetic control of transposable elements   |         |               |                 |
| 11                          | RNA processing and post-transcriptional gene regulation   |         |               |                 |
| Lecture 31                  | Group I and group II self-splicing introns  |         |               |                 |
| Lecture 32                  | Alternative splicing  |         |               |                 |
| Lecture 33                  | RNA editing   |         |               |                 |
| 12                          | Translation   |         | CT – 3, FINAL |                 |
| Lecture 34                  | Initiation of translation   |         |               |                 |
| Lecture 35                  | Elongation  |         |               |                 |
| Lecture 36                  | Termination and post-translational control  |         |               |                 |
| 13                          | Genetically modified organisms: use in basic and applied research   |         |               |                 |
| Lecture 37                  | Transgenic mice   |         |               |                 |
| Lecture 38                  | Gene-targeted mouse models  |         |               |                 |
| Lecture 39                  | Applications of transgenic animal technology  |         |               |                 |
| 14                          | Genome analysis and Gene Sequencing   |         |               |                 |
| Lecture 40                  | DNA typing and Editing  |         |               |                 |
| Lecture 41                  | Genomics and Proteomics   |         |               |                 |
| Lecture 42                  | Techniques in Gene sequencing   |         |               |                 |
| ASSESSMENT STRATEGY         |   |         |               |                 |
|                             |   |         |               |                 |
|                             |   |         |               |                 |
| Components                  |   | Grading | CO            | Blooms Taxonomy |
| Continuous assessment (40%) | Class Test/<br>Assignment 1-3   | 20%     | CO1, CO2      | C1, C2, C3      |

|   | participation |      |        |    |
|   | Midterm       | 15%  | CO3    | C4 |
| Final Exam  | 60%           | CO1  | C1, C2 |    |
|   |               | CO2  | C3     |    |
|   |               | CO3  | C4     |    |
| Total Marks   |               | 100% |        |    |
| (CO = Course Outcome, C = Cognitive Domain, P= Psychomotor Domain, A= Affective Domain)   |               |      |        |    |
| <b>TEXT BOOKS</b>   |               |      |        |    |
| 1. Fundamental Molecular Biology by Lizabeth A. Allison   |               |      |        |    |
| 2. Lehninger Principles of Biochemistry- 4th Edition, by Albert L. Lehninger, David L. Nelson, and Michael M. Cox.                                    |               |      |        |    |
| <b>REFERENCE BOOKS</b>  |               |      |        |    |
| 1. Molecular Cell Biology by Lodish, Berk, Matsudaira, Kaiser Krieger, Scott, Zipursky, Darnell.  |               |      |        |    |
| 2. Introduction to Molecular Biology and Genetic Engineering by Oliver Brandenberg, Zephaniah Dhlamini Alessandra Sensi, Kakoli Ghosh, Andrea Sonnino |               |      |        |    |

### 6.1.29 BME 406 Molecular Biology for Engineers Sessional

| COURSE INFORMATION  |   |                       |        |    |    |    |                    |
|---|---|-----------------------|--------|----|----|----|--------------------|
| Course Code   | : BME 406                                   | Lecture Contact Hours | : 3.00 |    |    |    |                    |
| Course Title  | : Molecular Biology for Engineers Sessional | Credit Hours          | : 1.50 |    |    |    |                    |
| PRE-REQUISITE   |   |                       |        |    |    |    |                    |
| Course Code: BME 406  |   |                       |        |    |    |    |                    |
| Course Title: Molecular Biology for Engineers   |   |                       |        |    |    |    |                    |
| CURRICULUM STRUCTURE  |   |                       |        |    |    |    |                    |
| Outcome Based Education (OBE)   |   |                       |        |    |    |    |                    |
| SYNOPSIS/RATIONALE  |   |                       |        |    |    |    |                    |
| The course covers routinely used molecular biology techniques used in diagnostics and laboratory. Topics cover both DNA based assays such as PCR, electrophoresis and protein-based assays such as ELISA and SDS-PAGE In-vitro cell culture techniques are also covered |   |                       |        |    |    |    |                    |
| OBJECTIVE   |   |                       |        |    |    |    |                    |
| This course aims to introduce the students to basic molecular biology techniques, their applications and methodologies.   |   |                       |        |    |    |    |                    |

| <b>COURSE CONTENT</b>   |  |                       |              |   |               |   |             |   |   |   |    |    |    |
| Extraction of DNA and RNA using commercially available DNA/RNA extraction kits. Identification of gene of interest using real-time PCR technique. Gene length quantification using gel electrophoresis. Protein extraction using kits and identification using SDS-PAGE techniques. Antigen/antibody detection using flow cytometry techniques. In-vitro cell culture in both 2D and 3D substrates with cell counting and differentiation using flow cytometry. |  |                       |              |   |               |   |             |   |   |   |    |    |    |

| SYNOPSIS/RATIONALE  |  |            |                       |               |             |    |    |                    |
| This course provides students with a basic understanding of the principles of healthcare technology planning and management - assessment, budgeting, acquisition, deployment, education/training, patient safety, maintenance, and replacement/disposal, hospital planning and management. Planning and management will focus on medical devices, clinical information systems, and converged technologies. |  |            |                       |               |             |    |    |                    |
| OBJECTIVE   |  |            |                       |               |             |    |    |                    |
| 1. To understand the basic guiding principles of healthcare technology planning and management  |  |            |                       |               |             |    |    |                    |
| 2. To provide a methodology for improving the quality of medical devices, clinical information systems and converged technology through effective planning and management   |  |            |                       |               |             |    |    |                    |
| 3. To help students better communicate with technical staff, clinicians, regulators, administrators, and technology vendors.  |  |            |                       |               |             |    |    |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |  |            |                       |               |             |    |    |                    |
| No.   | Course Outcome   |            | Bloom's Taxonomy      | PO            | CP          | CA | KP | Assessment Methods |
| CO1   | Be able to <b>understand</b> the management, administration and regulation of healthcare technology.   |            | C2                    | 11            | -           | -  | 1  | T, F               |
| CO2   | Be able to <b>analyze</b> the clinical effectiveness, efficiency and safety of patient and surrounding individuals.  |            | C4                    | 2, 8          | -           | -  | 6  | T, F               |
| CO3   | Be able to <b>evaluate</b> and manage the information regarding identification of biomedical and hospital technology planning, procurement and operation requirements. |            | C5                    | 4, 11         | -           | -  | 7  | MID, F             |
| CO4   | Be able to <b>manage</b> environmental considerations and sustainable engineering solutions to healthcare.   |            | C2                    | 7             | -           | -  | 7  | T, F               |

**COURSE CONTENT**

**Healthcare Technology Overview:** Introduction to healthcare technology management (HTM), Healthcare and introduction to digital and mobile health, Leveraging technology and innovation to improve healthcare, Hospital planning and management, Classification of hospitals and hospital systems, their role, functions, role of biomedical engineering, aspects of hospital services, Introduction to Norms and standards (e.g. HBN / FGI / AHA / ICRP / JCI / FDA / CE/ ISO), methods to monitor the standards, Hospital planning, location, orientation, budgeting, communication within the hospital and outside the hospital.

**Safety measure in Healthcare Facility:** Infection Control, Central Medical Gas System design, HVAC system, Concept of Ambulance services, Laundry services, Civil Assets, CSSD, Electrical factors in hospital design: voltage stabilizers, uninterrupted power supply for intensive care UNITS and computerized monitoring UNITS, safety precautions, interference of systems, protection, grounding of ECG, EEG, EMG and therapeutic equipment.

**Equipment service and maintenance:** Biomedical equipment services, their purchase, servicing and maintenance, condemned equipment disposal, training of men for medical equipment's, preventive and periodical maintenance procedures, life cycle of medical equipment.

**Electronic Medical Record & Hospital Management Strategy for Healthcare:** Computer based information management in hospitals, application, administration /discharge records of patients – patients billing, maintenance of patients' record, their history, and maintenance of inventory of medicines and drugs purchase, Hospital information system and picture archiving system (PACS), Telemedicine-Remote presence monitoring, companion diagnostics and outlook for personalized medicine.

**Support services in Healthcare:** Disaster management, Fire Fighting system, Elements of Safety, Orientation to Laboratory Safety, Radiation hazards, Radiation detection, Safety measures, Standards, Flammables and Explosives, Material Safety, Waste management.

**SKILL MAPPING**

| No. | Course Learning Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>understand</b> the management, administration and regulation of healthcare technology.   |                       |   |   |   |   |   |   |   |   |    | 3  |    |
| CO2 | Be able to <b>analyze</b> the clinical effectiveness, efficiency and safety of patient and surrounding individuals.  |                       | 2 |   |   |   |   |   | 2 |   |    |    |    |
| CO3 | Be able to <b>evaluate</b> and manage the information regarding identification of biomedical and hospital technology planning, procurement and operation requirements. |                       |   |   |   |   |   |   | 2 |   |    | 3  |    |
| CO4 | Be able to <b>manage</b> environmental considerations and sustainable engineering solutions to healthcare.   |                       |   |   |   |   |   | 3 |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| SYNOPSIS/RATIONALE  |  |                  |              |                       |             |     |                    |
| This course covers the major topics/subtopics that include impairments, disabilities and handicaps (identification and assessment); characterizing engineering concepts in sensory and motor rehabilitation; engineering concept in communication disorders; rehabilitation for locomotion, visual, speech & hearing; artificial limb and hands, prosthetic heart valves; externally powered and controlled orthotics and prosthetics; myoelectric hand and arm prostheses; Marcus intelligent hand prostheses, gait study and spinal rehabilitation.   |  |                  |              |                       |             |     |                    |
| OBJECTIVE   |  |                  |              |                       |             |     |                    |
| The goal of this course is to present rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. The focus of this course lies in the restoration and treatment of the human sensory and vegetative systems.  |  |                  |              |                       |             |     |                    |

| The aim of this course is to develop student’s ability to design a comprehensive product/service solution of an applied biomedical engineering problem. Students will be able to apply the knowledge and skills obtained through previous courses to design a new integrated solution, validation and proper evaluation of outcomes at different stage of the project. It is also expected to enhance student’s leadership ability in technical project management and be able to contribute in fourth industrial revolution.   |   |                       |                  |     |    |    |                    |
| OBJECTIVE   |   |                       |                  |     |    |    |                    |
| <div>1. To formulate a research problem based on the knowledge of major subject/field of study.</div> <div>2. Design an appropriate solution technique to address the research problem.</div> <div>3. To reach the ability to evaluate the performance of proposed solution.</div> <div>4. To compare the outcomes with the latest scientific development.</div> <div>5. To assess professional, ethical and social impacts of the designed solutions.</div> <div>6. To perform research tasks using proper project management practices.</div> <div>7. To develop student’s leadership ability through teamwork.</div> <div>8. To enhance student’s communication skill through presentation and technical reports.</div> <div>9. Articulation of the environmental and sustainability analysis in the designed project.</div> |   |                       |                  |     |    |    |                    |
| LEARNING OUTCOMES & GENERIC SKILLS  |   |                       |                  |     |    |    |                    |
| No.   | Course Outcomes   | Corresponding PO No.  | Bloom’s Taxonomy | KP  | CP | CA | Assessment Methods |
| CO1   | Identify the research gap and formulate a research problem related to biomedical engineering.                             | PO2                   | C4               | 3,4 | 1  | 1  | IR                 |
| CO2   | Design an appropriate engineering product/service solution that meets the required technical standard and specifications. | PO3                   | C6               | 5   | 1  | 2  | PR, PPr            |
| CO3   | Proficient in investigating the performance of the designed engineering product/service prototype.                        | PO4                   | C5, P5           | 8   | 3  |    | DR, ID             |

| The goal of this course is to prepare students for a clear concept about control system designing of the biomedical engineering devices. Modeling a system regarding mathematical aspect as well as electromechanical environment needs a deep concept about control system. Since biomedical devices are fully concerned with our physiological behavior and its control, this subject merges the concept of engineering control system and physiological control system to provide the students a sufficient knowledge regarding the mechanism of Physiological Control System. |   |                       |              |               |             |     |                    |
| OBJECTIVE   |   |                       |              |               |             |     |                    |
| <div>1. Be able to apply various concepts and laws to analyze a variety of dynamic systems.</div> <div>2. Be able to understand the key strategies that the body uses to regulate its function.</div> <div>3. Be able to develop an understanding for control system theory as applied to human physiology.</div> <div>4. Be able to apply linear control theory to model and analyze biological systems.</div>   |   |                       |              |               |             |     |                    |

|   |   |                       |              |               |             |     |                    |
| COURSE CONTENT  |   |                       |              |               |             |     |                    |

**Introduction to physiological modelling:** what is a model and why model, multi-scale organization of living organisms: cell to organ Homeostasis. Examples of physiological control systems

**Tools for modelling physical systems:** Review of linear systems, Laplace transform, Fourier series and Fourier transform, and system response in the time and frequency domains, transfer function, open-loop control, feedback control, and stability of systems, steady-state and transient analysis, design of PID controllers.

**Physiology of cardiovascular systems:** Key events in the cardiac cycle, blood pressure and flow, vascular impedance, lumped parameter models, Windkessel model of circulation, cardiac mechanics.

**Physiology of Endocrine system:** Enzymes and hormones, Michaelis-Menten enzyme kinetics, examples of endocrine control: glucose-insulin system, thyroid hormone system,

**Physiology of Nervous System:** Anatomy and physiology of nerves, action potentials, Hodgkin-Huxley model,

**Physiology of Respiratory System:** Respiratory mechanics, lung models.

**Physiology of Musculoskeletal System:** Muscle anatomy and physiology. How muscles contract. Hill model of muscle contraction, Muscle stretch reflex.

**Modeling complex physiological systems:** Regulation of cardiac output: Starling's law, pressure-volume curves, coupled model of cardiopulmonary system, Blood pressure regulation: Baroreceptor reflex, kidney for blood pressure regulation, Blood glucose regulation: insulin control of glucose, glucose utilization in muscle.

#### SKILL MAPPING

| No. | Course Learning Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>apply</b> various concepts and laws to analyze a variety of dynamic systems.           |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able to <b>understand</b> the key strategies that the body uses to regulate its function.         | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to develop an <b>understanding</b> for control system theory as applied to human physiology. | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO4 | Be able to <b>apply</b> linear control theory to model and <b>analyze</b> biological systems.        |                       | 3 | 3 |   |   |   |   |   |   |    |    |    |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

### 6.2.1.2 BME 413 Virtual Bioinstrumentation

| COURSE INFORMATION  |   |                       |        |    |    |    |                    |
|---|---|-----------------------|--------|----|----|----|--------------------|
| Course Code   | : BME 413   | Lecture Contact Hours | : 3.00 |    |    |    |                    |
| Course Title  | : Virtual Bioinstrumentation  | Credit Hours          | : 3.00 |    |    |    |                    |
| PRE-REQUISITE   |   |                       |        |    |    |    |                    |
| BME 207: Biomedical Instrumentation and Measurements  |   |                       |        |    |    |    |                    |
| CURRICULUM STRUCTURE  |   |                       |        |    |    |    |                    |
| Outcome Based Education (OBE)   |   |                       |        |    |    |    |                    |
| SYNOPSIS/RATIONALE  |   |                       |        |    |    |    |                    |
| To impart adequate knowledge on Virtual Instrumentation for acquisition and analysis of signals in medical system, to educate about the basic concepts of VI, programming concepts of VI, enable them to implement VI in medical systems and design Virtual Biomedical Instruments. |   |                       |        |    |    |    |                    |
| OBJECTIVE   |   |                       |        |    |    |    |                    |
| 1. Be able to <b>understand</b> the concept of virtual instruments, its importance and applications of virtual instrumentation.   |   |                       |        |    |    |    |                    |
| 2. Be able to <b>learn</b> about data acquisition concept, hardware and software.   |   |                       |        |    |    |    |                    |
| 3. Be able to <b>design</b> and <b>test</b> virtual biomedical instruments.   |   |                       |        |    |    |    |                    |
| 4. Be able to <b>develop</b> virtual biomedical instruments.  |   |                       |        |    |    |    |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |   |                       |        |    |    |    |                    |
| No.   | Course Outcome  | Bloom's Taxonomy      | PO     | CP | CA | KP | Assessment Methods |

|  |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>COURSE CONTENT</b>  |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>INTRODUCTION TO VIRTUAL INSTRUMENTATION (VI):</b> Review of Virtual Instrumentation, Historical perspective, Need of VI, Advantages of VI, Define VI, block diagram & architecture of VI, data flow techniques, graphical programming in data flow, comparison with conventional programming.   |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>VI PROGRAMMING Techniques:</b> Programming Techniques, VIS & Sub VIS, loops & charts, arrays, clusters, graphs, case & sequence structures, formula modes, local and global variable, string & file input.  |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>HARDWARE ASPECTS OF VI SYSTEM:</b> Data Acquisition basics: , Analog input: sampling rate, multiplexing, resolution, relative accuracy, noise, Analog output, Triggers, Real-Time system integration, Digital I/O. Timing I/O, ADC, DAC; PC-Based DAQ System: PC, transducers and signal conditioners, DAQ Hardware, , DIO, Counters & timers, Multichannel analog DAQ system, PC Hardware structure, timing, interrupts, DMA, Software and Hardware Installation.  |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>COMMON INSTRUMENT INTERFACE:</b> Common Instrument Interfaces for Current loop, RS 232C/Rs 485, GPIB, System basics, interface basics: USB, PCMCIA, VXI, SCXI, PXI etc, networking basics for office & industrial application, VISA and IVI.  |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>VI ANALYSIS TOOLS:</b> Use of Analysis tools, Fourier transforms, power spectrum, correlation methods, Windowing and filtering.   |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>APPLICATIONS of VI:</b> Application of VI in process control designing of equipment like oscilloscope, Digital multimeter, Design of digital Voltmeters with transducer input Virtual Laboratory, Web based Laboratory, Image acquisition & processing, Motion Control, VI based temperature monitor, VI based cardiac monitor, Multi-channel data acquisition using LABVIEW, ECG acquisition for long term monitoring of heart rate using VI, ECG signal processing and its importance using wavelet transform. Bio-Informatics and NI LabVIEW technology in drug discovery process. Testing of Medical Instruments. |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| <b>SKILL MAPPING</b>   |   |                       |              |               |             |     |        |   |   |   |    |    |    |
|  |   |                       |              |               |             |     |        |   |   |   |    |    |    |
| No.  | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |              |               |             |     |        |   |   |   |    |    |    |
|  |   | 1                     | 2            | 3             | 4           | 5   | 6      | 7 | 8 | 9 | 10 | 11 | 12 |

| (Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)   |   |                       |              |               |             |     |        |   |   |   |    |    |    |

| <b>TEACHING LEARNING STRATEGY</b>   |   |                      |
|---|---|----------------------|
| Teaching and Learning Activities  |   | Engagement (hours)   |
| Face-to-Face Learning   |   |                      |
| Lecture   |   | 42                   |
| Practical / Tutorial / Studio   |   | -                    |
| Student-Centred Learning  |   | -                    |
| Self-Directed Learning  |   |                      |
| Non-face-to-face learning   |   | 42                   |
| Revision of the previous and (or) subsequent lecture at home                        |   | 21                   |
| Preparation for final examination   |   | 21                   |
| Formal Assessment   |   |                      |
| Continuous Assessment   |   | 2                    |
| Final Examination   |   | 3                    |
| Total   |   | 131                  |
| <b>TEACHING METHODOLOGY</b>   |   |                      |
| Lecture and discussion, Co-operative and collaborative method, Problem based method |   |                      |
| <b>COURSE SCHEDULE</b>  |   |                      |
| Week  | Topic   | Assessment           |
| <b>1</b>  | <b>INTRODUCTION TO VIRTUAL INSTRUMENTATION (VI)</b>   | <b>CT – 1, Final</b> |
| Lecture 1   | Review of Virtual Instrumentation, Historical perspective, Need of VI, Advantages of VI, Define VI  |                      |
| Lecture 2   | Block diagram & architecture of VI  |                      |
| Lecture 3   | Data flow techniques, graphical programming in data flow, comparison with conventional programming. |                      |
| <b>2</b>  | <b>HARDWARE ASPECTS OF VI SYSTEM</b>  |                      |
| Lecture 4   | Data Acquisition (DAQ) basics   |                      |
| Lecture 5   |   |                      |
| Lecture 6   | Analog to Digital Converter (ADC)   |                      |
| <b>3</b>  | <b>HARDWARE ASPECTS OF VI SYSTEM</b>  |                      |
| Lecture 7   | Analog to Digital Converter (ADC)   |                      |
| Lecture 8   | Digital to Analog Converter (DAC)   |                      |
| Lecture 9   |   |                      |
| <b>4</b>  | <b>HARDWARE ASPECTS OF VI SYSTEM</b>  |                      |
| Lecture 10  | PC-Based DAQ System: PC, transducers and signal conditioners, DAQ                                   |                      |
| Lecture 11  | Hardware  |                      |
| Lecture 12  | Multichannel analog DAQ system  |                      |
| <b>5</b>  | <b>HARDWARE ASPECTS OF VI SYSTEM</b>  |                      |
| Lecture 13  | DIO, DMA for DAQ  |                      |
| Lecture 14  | Counters, timers, interrupts for DAQ  |                      |

|                |  |                       |
|----------------|--|-----------------------|
| Lecture 15     | PC Hardware structure, Software and Hardware Set up for VI.  | <b>Midterm, Final</b> |
| <b>6</b>       | <b>COMMON INSTRUMENT INTERFACE</b>   |                       |
| Lecture 16     | Common Instrument Interfaces for Current loop, RS 232C/Rs 485,   |                       |
| Lecture 17     | GPIB, System basics  |                       |
| Lecture 18     | Interface basics: USB, PCMCIA  |                       |
| <b>7</b>       | <b>COMMON INSTRUMENT INTERFACE</b>   |                       |
| Lecture 19     | Interface basics: VXI, SCXI, PXI etc   |                       |
| Lecture 20     | networking basics for office & industrial application,   |                       |
| Lecture 21     | VISA and IVI.  |                       |
| <b>Midterm</b> |  |                       |
| <b>8</b>       | <b>VI PROGRAMMING Techniques</b>   | <b>CT – 2, Final</b>  |
| Lecture 22     | Programming Techniques, VIS & Sub VIS  |                       |
| Lecture 23     | Loops & charts, string & file input.   |                       |
| Lecture 24     | arrays, clusters   |                       |
| <b>9</b>       | <b>VI PROGRAMMING Techniques</b>   |                       |
| Lecture 25     | Graphs, waveforms  |                       |
| Lecture 26     | case & sequence structures   |                       |
| Lecture 27     | formula modes, local and global variable   |                       |
| <b>10</b>      | <b>VI ANALYSIS TOOLS</b>   |                       |
| Lecture 28     | Use of Analysis tools: Fourier transforms, power spectrum, correlation methods, Windowing and filtering. |                       |
| Lecture 29     | Use of Analysis tools: power spectrum, correlation methods   |                       |
| Lecture 30     | Use of Analysis tools: Windowing and filtering.  |                       |
| <b>11</b>      | <b>APPLICATIONS of VI</b>  | <b>CT – 3, FINAL</b>  |
| Lecture 31     | Application of VI in process control designing of equipments like oscilloscope, Digital multimeter       |                       |
| Lecture 32     | Design of digital Voltmeters with transducer input Virtual Laboratory                                    |                       |
| Lecture 33     | Web based Laboratory   |                       |
| <b>12</b>      | <b>APPLICATIONS of VI</b>  |                       |
| Lecture 34     | Image acquisition & processing   |                       |
| Lecture 35     | Motion Control   |                       |
| Lecture 36     | VI based temperature monitor   |                       |
| <b>13</b>      | <b>APPLICATIONS of VI</b>  | <b>FINAL</b>          |
| Lecture 37     | VI based cardiac monitor   |                       |
| Lecture 38     | Multi-channel data acquisition using LABVIEW   |                       |
| Lecture 39     | ECG acquisition for long term monitoring of heart rate using VI  |                       |
| <b>14</b>      | <b>APPLICATIONS of VI</b>  |                       |
| Lecture 40     | ECG signal processing and its importance using wavelet transform.  |                       |
| Lecture 41     | Bio-Informatics and NI labVIEW technology in drug discovery process.                                     |                       |
| Lecture 42     | Testing of Medical Instruments.  |                       |

| SYNOPSIS/RATIONALE   |                |                       |        |
| This course is designed for delivering the knowledge about the magical properties of photobiology and their wide applications in different fields of biomedical engineering.                           |                |                       |        |
| OBJECTIVE  |                |                       |        |
| 1. To deliver the fundamental principles of biophotonics<br>2. To connect the students learning about the wide application of different optical devices in different fields of biomedical engineering. |                |                       |        |

| COURSE OUTCOMES & GENERIC SKILLS  |   |                  |              |               |             |     |                    |

| COURSE CONTENT   |   |                       |              |               |             |     |                    |
| <b>BASIC RADIATION PHYSICS:</b> Introduction to Radiology and radiotherapy, Overview of atomic and nuclear structure, Electron interactions, Photon interactions   |   |                       |              |               |             |     |                    |
| <b>DOSIMETRIC PRINCIPLES, QUANTITIES AND UNITS:</b> Photon fluence and energy fluence, KERMA, CEMA, absorbed dose, stopping power, Relationships between various dosimetric quantities, Cavity theory    |   |                       |              |               |             |     |                    |
| <b>RADIATION DOSIMETERS:</b> Properties of dosimeters, Ionization chamber dosimetry systems, Film dosimetry, Luminescence dosimetry, Semiconductor dosimetry, Other dosimetry systems, primary standards |   |                       |              |               |             |     |                    |
| <b>RADIATION MONITORING INSTRUMENTS:</b> Operational quantities for Radiation monitoring, Ionization   |   |                       |              |               |             |     |                    |

chambers, Proportional counters, Neutron area survey meters, Geiger–Müller counters, Scintillator detectors, Semiconductor detectors, Commonly available features of area survey meters, Calibration of survey meters, Properties of survey meters

**RADIATION MONITORING INSTRUMENTS:** Individual monitoring: Film badge, Thermoluminescence dosimetry badge, Radiophotoluminescent glass dosimetry systems, Optically stimulated luminescence systems, Direct reading personal monitors, Calibration of personal dosimeters, Properties of personal monitors.

**TREATMENT MACHINES FOR EXTERNAL BEAM RADIOTHERAPY:** X-RAY beams and X-RAY units, GAMMA-RAY beams and GAMMA RAY units, Particle accelerators: Betatron, Cyclotron, Microtron, LINAC generations, Safety of LINAC installations, Linac treatment head, Production of clinical photon beams in a LINAC, Beam collimation, Components of modern LINACs, Configuration of modern LINACs, Radiofrequency power generation system, Microwave power transmission, Accelerating waveguide, Injection system, Auxiliary system, Electron beam transport, Production of clinical electron beams in a LINAC, Dose monitoring system, Radiotherapy with protons, neutrons and Heavy ions, Introduction of Simulator, Description of the Standard Simulator, Special Features, Simulators and Computed Tomography simulators

**QUALITY ASSURANCE OF EXTERNAL BEAM RADIOTHERAPY:** Quality assurance in radiotherapy, Quality control, Quality standards, Need for quality assurance in radiotherapy, Requirements on accuracy in radiotherapy, Managing a quality assurance programme, quality assurance programme for equipment, Treatment delivery, and Quality audit.

**BRACHYTHERAPY-PHYSICAL AND CLINICAL ASPECTS:** Introduction and photon source characteristics, Clinical use and dosimetry systems, Dose distributions around sources, Dose calculation procedures, Commissioning of brachytherapy computer, Treatment planning systems, Source commissioning, Quality Assurance.

**SPECIAL PROCEDURES AND TECHNIQUES IN RADIOTHERAPY:** Image guided radiotherapy, Overview of Stereotactic irradiation, Total body irradiation, Total skin electron irradiation, Intraoperative radiotherapy, Endocavitary Rectal irradiation, Conformal radiotherapy

#### SKILL MAPPING

| No. | Course Learning Outcome   | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|---|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |   | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |

| CO2 | Be able to <b>understand</b> the principles Radiation measuring instruments   | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO3 | Be able to <b>learn</b> the principles of Radiotherapy equipment.   | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO4 | Be able to <b>analyze</b> the Quality Assurance techniques of Radiotherapy Equipment  |                       | 3 | 1 |   |   |   |   |   |   |    |    |    |
| CO5 | Be able to <b>critically review</b> recent articles from the scientific literature and <b>identify</b> areas of research opportunities. |                       |   | 3 |   |   |   |   |   | 3 |    |    | 2  |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

| <b>TEACHING LEARNING STRATEGY</b>   |   |                      |
|---|---|----------------------|
| Teaching and Learning Activities  |   | Engagement (hours)   |
| Face-to-Face Learning   |   |                      |
| Lecture   |   | 42                   |
| Practical / Tutorial / Studio   |   | -                    |
| Student-Centred Learning  |   | -                    |
| Self-Directed Learning  |   |                      |
| Non-face-to-face learning   |   | 42                   |
| Revision of the previous and (or) subsequent lecture at home                        |   | 21                   |
| Preparation for final examination   |   | 21                   |
| Formal Assessment   |   |                      |
| Continuous Assessment   |   | 2                    |
| Final Examination   |   | 3                    |
| Total   |   | 131                  |
| <b>TEACHING METHODOLOGY</b>   |   |                      |
| Lecture and discussion, Co-operative and collaborative method, Problem based method |   |                      |
| <b>COURSE SCHEDULE</b>  |   |                      |
| Week  | Topic   | Assessment           |
| <b>1</b>  | <b>Basic radiation physics</b>  | <b>CT – 1, Final</b> |
| Lecture 1   | Introduction to Radiology and radiotherapy, Overview of atomic and nuclear structure, Classification of radiation |                      |
| Lecture 2   | Electron interactions   |                      |
| Lecture 3   | Photon interactions   |                      |
| <b>2</b>  | <b>Dosimetric principles, quantities and units</b>  |                      |
| Lecture 4   | Photon fluence and energy fluence, KERMA, CEMA, absorbed dose, stopping power                                     |                      |
| Lecture 5   | Relationships between various dosimetric quantities   |                      |
| Lecture 6   | Cavity theory   |                      |
| <b>3</b>  | <b>Radiation Dosimeters</b>   |                      |
| Lecture 7   | Properties of dosimeters, Ionization chamber dosimetry systems  |                      |
| Lecture 8   | Film dosimetry, Luminescence dosimetry  |                      |
| Lecture 9   | Semiconductor dosimetry, Other dosimetry systems, primary standards   |                      |
| <b>4</b>  | <b>Radiation monitoring instruments</b>   |                      |
| Lecture 10  | Operational quantities for Radiation monitoring, Ionization chambers  |                      |
| Lecture 11  | Proportional counters, Neutron area survey meters,  |                      |
| Lecture 12  | Geiger–Müller counters  |                      |
| <b>5</b>  | <b>Radiation monitoring instruments</b>   |                      |
| Lecture 13  | Scintillator detectors, Semiconductor detectors   |                      |
| Lecture 14  | Commonly available features of area survey meters, Properties   |                      |

|            |   |                |
|------------|---|----------------|
|            | of survey meters  | Midterm, Final |
| Lecture 15 | Calibration of survey meters  |                |
| 6          | Radiation monitoring instruments  |                |
| Lecture 16 | Individual monitoring: Film badge, Thermoluminescence dosimetry badge   |                |
| Lecture 17 | Radiophotoluminescent glass dosimetry systems, Optically stimulated luminescence systems,   |                |
| Lecture 18 | Direct reading personal monitors, Calibration of personal dosimeters, Properties of personal monitors   |                |
| 7          | Treatment machines for External Beam Radiotherapy   |                |
| Lecture 19 | X-RAY beams and X-RAY units, GAMMA-RAY beams and GAMMA RAY units  |                |
| Lecture 20 | Particle accelerators: Betatron, Cyclotron, Microtron   |                |
| Lecture 21 |   |                |
| Midterm    |   |                |
| 8          | Treatment machines for External Beam Radiotherapy   | CT – 2, Final  |
| Lecture 22 | LINAC principle, LINAC treatment head, Safety of LINAC installations  |                |
| Lecture 23 | Production of clinical photon beams in a LINAC, Beam collimation  |                |
| Lecture 24 | Components of modern LINACs , Configuration of modern LINACs  |                |
| 9          | Treatment machines for External Beam Radiotherapy   |                |
| Lecture 25 | Radiofrequency power generation system, Microwave power transmission , Accelerating waveguide   |                |
| Lecture 26 | Injection system , Auxiliary system , Electron beam transport   |                |
| Lecture 27 | Production of clinical electron beams in a LINAC, Dose monitoring system  |                |
| 10         | Treatment machines for External Beam Radiotherapy   |                |
| Lecture 28 | Radiotherapy with protons, neutrons and Heavy ions  |                |
| Lecture 29 | Introduction of Simulator, Description of the Standard Simulator, Special Features  | CT – 3, FINAL  |
| Lecture 30 | Simulators and Computed Tomography simulators   |                |
| 11         | QUALITY ASSURANCE of External Beam Radiotherapy   |                |
| Lecture 31 | Quality assurance in radiotherapy, Quality control, Quality standards, Need for quality assurance in radiotherapy, Requirements on accuracy in radiotherapy |                |
| Lecture 32 | Managing a quality assurance programme, quality assurance programme for equipment   |                |
| Lecture 33 | Treatment delivery, Quality audit   |                |
| 12         | Brachytherapy: Physical and Clinical aspects  |                |
| Lecture 34 | Introduction and photon source characteristics  |                |
| Lecture 35 | Clinical use and dosimetry systems  |                |
| Lecture 36 | Dose distributions around sources, Dose calculation procedures  |                |

|   |   |         |          |                 |
|---|---|---------|----------|-----------------|
| 13  | Brachytherapy: Physical and Clinical aspects  |         |          | FINAL           |
| Lecture 37  | Commissioning of brachytherapy computer Treatment planning systems  |         |          |                 |
| Lecture 38  | Source commissioning, Quality Assurance   |         |          |                 |
| Lecture 39  | Brachytherapy versus External Beam Radiotherapy   |         |          |                 |
| 14  | Special procedures and techniques in radiotherapy + Radiation Protection & Safety   |         |          |                 |
| Lecture 40  | Image guided radiotherapy   |         |          |                 |
| Lecture 41  | Overview of Stereotactic irradiation, Total body irradiation, Total skin electron irradiation, Intraoperative radiotherapy, Endocavitary Rectal irradiation, Conformal radiotherapy |         |          |                 |

|                                   | Outcome Based Education (OBE)  |  |                  |    |    |    |                    |
| SYNOPSIS/RATIONALE                |  |  |                  |    |    |    |                    |
|                                   | Although lives of thousands of people are saved by reconstructive surgery, many people are still waiting for organ donations. In the last decade Tissue engineering has emerged as a new discipline within reconstructive surgery, with focus on in vitro fabrication of living, human spare parts. Tissue engineering encompasses several different sciences such as biology, chemistry, material science, engineering, immunology and transplantation. The course in Tissue engineering provides a general understanding of tissue growth and development as well as the tools and theoretical information necessary to design tissues and organs. |  |                  |    |    |    |                    |
| OBJECTIVES                        |  |  |                  |    |    |    |                    |
|                                   | 1. To able to impart basic knowledge on cellular organization of life<br>2. To be able familiarize the students with the fabrication techniques used in Tissue engineering<br>3. To be able to identify problems and suggests remedy in the field of regenerative medicine   |  |                  |    |    |    |                    |

| TEACHING METHODOLOGY  |   |                           |
|---|---|---------------------------|
| Lecture and Discussion, Co-operative and collaborative method, Problem based method |   |                           |
| Week  | Content   | Assessment                |
| 1   | Course introduction   | CT – 1 and Midterm, Final |
| Lecture 1   | Basic principles of Tissue Engineering                        |                           |
| Lecture 2   | Application of Tissue Engineering                             |                           |
| Lecture 3   | Challenges and ethical issues in Tissue Engineering           |                           |
| 2   | Basic cells culture   |                           |
| Lecture 4   | Cell culture, subculture, proliferation and storage           |                           |
| Lecture 5   | Cell adhesion and migration                                   |                           |
| Lecture 6   | 3D cell culture   |                           |
| 3   | Stem cell and differentiation                                 |                           |
| Lecture 7   | Adult Stem Cells  |                           |
| Lecture 8   | Hematopoietic Stem Cells                                      |                           |
| Lecture 9   | Embryonic Stem Cells and induced pluripotent stem cells       |                           |
| 4   | Extracellular matrix  | Midterm, Final            |
| Lecture 10  | Composition of extracellular matrix                           |                           |
| Lecture 11  | Matrix metalloproteinases (MMPs) and Metalloproteinase (ADAM) |                           |
| Lecture 12  | Decellularization   |                           |
| 5   | Vascularity, angiogenesis and Growth factors                  |                           |
| Lecture 13  | Principle of cell signaling and types of receptors            |                           |
| Lecture 14  | Growth factors delivery and gene therapy                      |                           |
| Lecture 15  | Vascularity, angiogenesis and wound healing                   |                           |
| 6   | Scaffolds in tissue engineering                               |                           |
| Lecture 16  | Features of scaffold  |                           |
| Lecture 17  | Materials for scaffold formation                              |                           |
| Lecture 18  | Cell-Biomaterial Interactions                                 |                           |
| 7   | Tissue Engineering and host response                          |                           |
| Lecture 19  | Transplantation immunology and grafts (organ donation)        |                           |
| Lecture 20  | Regulating factors of Transplantation and grafts              |                           |
| Lecture 21  | Clinical experience   |                           |
| MIDTERM   |   |                           |
| 8   | Biofabrication  |                           |
| Lecture 22  | Fabrication of scaffolds                                      |                           |
| Lecture 23  | Biomaterial Processing for TE 1                               |                           |
| Lecture 24  | Biomaterial Processing for TE 2                               |                           |

|            |   |                      |
|------------|---|----------------------|
| <b>9</b>   | <b>Biomanufacture</b>                         | <b>CT – 2, FINAL</b> |

| The goal of this course is to prepare students for an academic and industrial career in pharmaceuticals and/or drug delivery. Key concepts in medicinal chemistry is discussed and the pipeline for drug development starting from computational analysis all the way through to clinical trials and commercialization is covered. Drug delivery and targeting methods is also explored in sufficient details. |   |                       |        |    |    |     |                    |
| OBJECTIVE  |   |                       |        |    |    |     |                    |
| 1. Bo be able to <b>understand</b> drug design based on functions and activity<br>2. Be able <b>optimize</b> and test drugs for safety, efficacy, and biological activity<br>3. Be able to <b>understand</b> and appreciate the levels of clinical trial and testing for drug commercialization<br>4. Be able <b>design and develop</b> drug delivery systems and targeted drug delivery methods               |   |                       |        |    |    |     |                    |

|---------------|-----------------|------------|--------------|---------------|-------------|

### COURSE CONTENT

The course covers the following modules: drug design, drug development, drug toxicity, selectivity, structure activity relationships. drug dosage, drug safety and standards, clinical trials and product validation, drug delivery methods, targeted drug delivery, chemotherapy and cancer therapeutics.

### SKILL MAPPING

| No. | Course Learning Outcome  | PROGRAM OUTCOMES (PO) |   |   |   |   |   |   |   |   |    |    |    |
|-----|--|-----------------------|---|---|---|---|---|---|---|---|----|----|----|
|     |  | 1                     | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| CO1 | Be able to <b>understand</b> drug design based on functions and activity   | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO2 | Be able <b>optimize</b> and test drugs for safety, efficacy, and biological activity   |                       |   | 3 |   |   | 1 |   |   |   |    |    |    |
| CO3 | Be able to <b>understand</b> and appreciate the levels of clinical trial and testing for drug commercialization                    | 3                     |   |   |   |   |   |   |   |   |    |    |    |
| CO4 | Be able <b>design and develop</b> drug delivery systems and targeted drug delivery methods   |                       | 3 |   |   |   |   |   |   |   |    |    |    |
| CO5 | Be able to critically review recent articles from the scientific literature and identify relevant areas of research opportunities. |                       |   | 3 |   |   |   |   |   | 3 |    |    | 12 |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

### TEACHING LEARNING STRATEGY

| SYNOPSIS/RATIONALE  |  |            |                       |               |    |    |             |                    |
| The goal of this course is to introduce students to the world of nanotechnology and its application in biology and medicine. Topics include solid state theory in physics and the fundamentals of nano sciences, optical, mechanical and electrical properties of nanoparticles. Fabrication, characterization and applications of nanotechnology in MEMS, NEMS is also covered |  |            |                       |               |    |    |             |                    |
| OBJECTIVE   |  |            |                       |               |    |    |             |                    |
| 1. Be able to <b>understand</b> the fundamentals of nanotechnology  |  |            |                       |               |    |    |             |                    |
| 2. Be able to <b>synthesize</b> nanoparticles and nanosystems   |  |            |                       |               |    |    |             |                    |
| 3. Be able to <b>characterize</b> the properties of nanoparticles and nanosystems   |  |            |                       |               |    |    |             |                    |
| 4. Be able to <b>design</b> and <b>develop</b> nanosystems for applications in biology  |  |            |                       |               |    |    |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |  |            |                       |               |    |    |             |                    |

| CO3 | Be able to <b>characterize</b> the properties of nanoparticles and nanosystems   | 3                     | 3 |   |   |   |   |   |   |   |    |    |    |
| CO4 | Be able to <b>design</b> and <b>develop</b> nanosystems for applications in biology  |                       |   | 3 |   |   | 1 |   |   |   |    |    |    |
| CO5 | Be able to critically review recent articles from the scientific literature and identify relevant areas of research opportunities. |                       |   | 3 |   |   |   |   |   | 3 |    |    | 3  |

(Numerical method used for mapping which indicates 3 as high, 2 as medium, and 1 as low level of matching)

**TEACHING LEARNING STRATEGY**

| Teaching and Learning Activities                             | Engagement (hours) |
|--|--------------------|
| Face-to-Face Learning  |                    |
| Lecture  | 42                 |
| Practical / Tutorial / Studio                                | -                  |
| Student-Centred Learning                                     | -                  |
| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for final examination                            | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Week      | Content   | Assessment                 |
|-----------|---|----------------------------|
| <b>1</b>  | <b>Motivation and course introduction</b>                       | <b>CT – 1 and Midterm,</b> |
| Lecture 1 | Introduction to nanomaterials and nanotechnology                |                            |
| Lecture 2 | Top-down and bottom up approaches to synthesizing nanoparticles |                            |
| Lecture 3 | Overview of quantum mechanics in nanotechnology                 |                            |

|            |  |                |
|------------|--|----------------|
| 2          | Solid-state physics  | Final          |
| Lecture 4  | Solid state physics fundamentals in nanoscience                                  |                |
| Lecture 5  | Thermal consideration in nanoparticle development                                |                |
| Lecture 6  | Quantum consideration in nanoparticle development                                |                |
| 3          | Properties of nanoparticles  |                |
| Lecture 7  | Size dependence of nanoparticles   |                |
| Lecture 8  | Surface and bulk properties of nanoparticles                                     |                |
| Lecture 9  | Nanoscale interactions   |                |
| 4          | Properties of nanoparticles  |                |
| Lecture 10 | Mechanical properties of nanomaterials   |                |
| Lecture 11 | Electrical properties of nanoparticles – conductivity and resistivity            |                |
| Lecture 12 | Classification of nanomaterials based on conductivity                            |                |
| 5          | Properties of nanoparticles  | Midterm, Final |
| Lecture 13 | Optical properties of nanoparticles  |                |
| Lecture 14 | Thermal properties of nanomaterials  |                |
| Lecture 15 | Magnetic nanoparticles and their properties                                      |                |
| 6          | Characterization of nanosystems  |                |
| Lecture 16 | X-Ray diffraction, X-ray absorption spectroscopy, NMR                            |                |
| Lecture 17 | Plasmonic nanoparticles, SERS and RAMAN spectroscopy                             |                |
| Lecture 18 | Electron microscopy, Dynamic light scattering, photoelectric emission scattering |                |
| 7          | Fabrication of nanosystems   |                |
| Lecture 19 | Lithography techniques for fabricating nanosystems                               |                |
| Lecture 20 | Procedures used in lithography   |                |
| Lecture 21 | Procedures used in lithography   |                |
| MIDTERM    |  |                |
| 8          | MEMS and NEMS  | CT – 2, FINAL  |
| Lecture 22 | Introduction to MEMS and NEMS technology   |                |
| Lecture 23 | Microfluidics applications of MEME and NEMS                                      |                |
| Lecture 24 | Etching and bonding in MEMS/NEMS   |                |
| 9          | Synthesis and preparation of nanomaterials                                       |                |
| Lecture 25 | Sol-gel method, Chemical Vapor Deposition (CVD), Physical Vapor Deposition (PVD) |                |
| Lecture 26 | Bonding, characteristics of Carbon nanoparticles – Fullerene and nanotubes       |                |
| Lecture 27 | Synthesis and properties of Carbon nanoparticles – Fullerene and nanotubes       |                |
| 10         | Nanowires and Quantum dots   |                |
| Lecture 28 | Nanowires, nanowells, nanocomposites   |                |
| Lecture 29 | Quantum dots – physics, structure and size dependence                            |                |
| Lecture 30 | Quantum dots – therapeutic and detection of diseases                             |                |
| 11         | Molecular Devices  |                |
| Lecture 31 | DNA nanotechnology, molecular and supramolecular switches                        |                |
| Lecture 32 | Protein, glyco, lipid nanotechnology   |                |

|   |  |               |                    |                    |
|---|--|---------------|--------------------|--------------------|
| Lecture 33  | Biobots and bionanomachines                      | CT – 3, FINAL |                    |                    |

| Outcome Based Education (OBE)  |  |                       |              |               |    |             |                    |
| SYNOPSIS/RATIONALE   |  |                       |              |               |    |             |                    |
| The course covers the following modules: introduction to artificial organs, rheological properties of blood, blood viscosity variation, artificial kidney, hemodialyzers, artificial heart-lung machine, audiometry, and hearing aids.                   |  |                       |              |               |    |             |                    |
| OBJECTIVE  |  |                       |              |               |    |             |                    |
| 1. To identify and analyze the factors and parameters influencing blood flow   |  |                       |              |               |    |             |                    |
| 2. To explain and examine the mechanism of dialysis of kidney, gas exchange in lungs, and sound conduction in ear  |  |                       |              |               |    |             |                    |
| 3. To design and develop artificial kidney, artificial heart-lung machine, and hearing aids  |  |                       |              |               |    |             |                    |
| COURSE OUTCOMES & GENERIC SKILLS   |  |                       |              |               |    |             |                    |
| No.  | Course Outcome   | Bloom's Taxonomy      | PO           | CP            | CA | KP          | Assessment Methods |
| CO1  | Be able to <b>apply</b> the factors and parameters influencing blood flow  | C3                    | 3            | -             | -  | 1           | T, MID, F          |
| CO2  | Be able to <b>understand</b> the mechanism of dialysis of kidney, gas exchange in lungs, and sound conduction in ear               | C2                    | 1            | -             | -  | 3           | T, MID, F          |
| CO3  | Be able to <b>analyze</b> the working mechanism of artificial kidney, artificial heart-lung machine, and hearing aids              | C4                    | 3            | -             | -  | 4           | T, F               |
| CO5  | Be able to critically review recent articles from the scientific literature and identify relevant areas of research opportunities. | C6                    | 3,9,12       | 5             | 5  | 5           | PR, Pr, R          |
| (CP- Complex Problems, CA-Complex Activities, KP-Knowledge Profile,T – Test; PR – Project; Q – Quiz; ASG – Assignment; Pr – Presentation; R - Report; F – Final Exam)  |  |                       |              |               |    |             |                    |
| C1 - Remember  | C2 – Understand  | C3 - Apply            | C4 - Analyze | C5 – Evaluate |    | C6 - Create |                    |
| COURSE CONTENT   |  |                       |              |               |    |             |                    |
| Introduction to Artificial Organs: Biomaterials used in artificial organs and prostheses, inflammation, rejection, correction.   |  |                       |              |               |    |             |                    |
| Rheological properties of blood, blood viscosity variation: effect of shear rate, hematocrit, temperature and protein contents. Casson equation, flow properties of blood through the blood vessels, problems associated with extracorporeal blood flow. |  |                       |              |               |    |             |                    |
| Artificial Kidney: Brief of kidney filtration, basic methods of artificial waste removal, hemodialysis, equation for artificial kidney and middle molecule hypothesis.   |  |                       |              |               |    |             |                    |
| Hemodialysers: flat plate type, coil type and hollow fiber. Analysis of mass transfer in dialyers (cross current & cocurrent flow), regeneration of dialysate, membrane configuration, wearable artificial kidney machine, separation                    |  |                       |              |               |    |             |                    |

of antigens from blood in ESRD patients.  
 Artificial Heart-lung Machine: Brief of lungs gaseous exchange / transport, artificial heart-lung devices.  
 Oxygenators: bubble, film oxygenators and membrane oxygenators. Gas flow rate and area for membrane oxygenators. Liver support system, artificial pancreas, blood and skin.  
 Audiometry: air conduction, bone conduction, masking, functional diagram of an audiometer.  
 Hearing aids: different types, receiver amplifiers. Ophthalmoscope, retinoscope, I.A.B.P principle and application.

| COURSE CONTENT  |  |            |                       |               |     |             |     |                    |

**Biomedical signal recording system:** Review on Biomedical signals and system, spectral characteristics of biomedical signals, bio-sensors and acquisition of biomedical signals, sampling, quantization and encoding, multi-rate data acquisition systems, compressed sensing; time-domain analysis of biomedical signals; **Statistical analysis of biosignals:** Biomedical signals using higher order statistics (HOS), Principal component analysis (PCA), Independent component analysis (ICA), Common spatial pattern (CSP), Singular value decomposition (SVD), Singular spectrum analysis (SSA) etc. Estimation of power spectrum and correlation analysis.

**Time-frequency domain analysis of biomedical signals:** short-time Fourier transform, wavelet transform, empirical mode decomposition; **Digital filters for processing biomedical signals:** different types of artifacts and noise, filters in time-domain and frequency-domain, time-frequency domain-based filtering; **Event detection and feature extraction:** signal segmentation, envelope extraction, temporal and spectral features, statistical features, pattern classification using neural networks and support vector machine; **Modeling biomedical systems:** autoregressive model, pole-zero and spectral modeling, Linear mixture modelling, applications of biomedical systems.

**SKILL MAPPING**

| The course introduces the students to the physics of radionucleotide and radionucleotide decay, radionucleotide generators and detection. Emphasis is given on medical cyclotrons for producing radioisotopes used in molecular imaging. Radionucleotide detection using Gamma camera and other related method is also covered. Few key nuclear imaging methods, namely, SPECT, SPECT-CT, PET, PET-CT are covered in sufficient details.  |  |                       |              |               |    |             |                    |

| This course introduces students to basic concepts of molecular biology including the central dogma of biology, DNA replication, transcription, translation, and nucleic acid and protein analytical tools. Introduction to basic bioinformatics algorithms for pair-wise and multiple sequence alignment, statistical significance testing, Bayesian theorem, predictive modeling and phylogenetic analysis is covered. Students will also learn to use currently existing database retrieval systems and online bioinformatics tools through in-class exercises and assignments. |   |                  |                       |              |               |    |             |                    |

| The goal of this course is to expose students to the field of data science and computer vision. The course will provide students a solid background of machine learning and deep learning, this will enable students to solve various problems in the domain of medical imaging, bioinformatics, medical device development and biomedical implants using Artificial Intelligence. Student will undergo graded coding assignments, which will enable them to implement different aspects of machine learning and deep learning in solving problems of various domains. |  |                       |              |               |             |    |                    |
| OBJECTIVE  |  |                       |              |               |             |    |                    |
| 1. To identify and understand fundamentals of artificial intelligence.<br>2. To apply the fundamental concepts of machine learning and deep learning in the domain of biomedical data science.<br>3. To analyze the various machine learning algorithms.<br>4. To evaluate various deep learning architectures.  |  |                       |              |               |             |    |                    |

| COURSE SCHEDULE   |  |                |
| Week  | Topic  | Assessment     |
| 1   | Motivation and course introduction   | CT – 1, Final  |
| Lecture 1   | Introduction to Artificial Intelligence  |                |
| Lecture 2   | Artificial Intelligence in Healthcare  |                |
| Lecture 3   | Artificial Intelligence in Healthcare (continue)   |                |
| 2   | Basic Python Programming   |                |
| Lecture 4   | Data Types, Loops, Functions, Reading and Writing Files  |                |
| Lecture 5   | Object Oriented programming  |                |
| Lecture 6   | Threading, Multiprocess, Libraries: numpy, matplotlib  |                |
| 3   | Python Programming for Data Science And computer Vision  |                |
| Lecture 7   | Introduction to Pandas, Introduction to OpenCV   | Midterm, Final |
| Lecture 8   | Introduction to Sklearn  |                |
| Lecture 9   | Introduction to Tensorflow   |                |
| 4   | Basic Data Processing and Data Visualization   |                |
| Lecture 10  | Data Preprocessing: Dealing with null values, Image resizing, introduction to dimensionality reduction |                |
| Lecture 11  | Introduction to sea born: Heat Map, Box Plotm Scatter Plot, 3D plot, Linear Plot, Line Plot            |                |
| Lecture 12  | Introduction to sea born: Swarmplot, barplot, Distribution Plot, Regression Plot                       |                |
| 5   | Introduction to Pattern Recognition  |                |
| Lecture 13  | Supervised Learning, Unsupervised Learning, Semi Supervised Learning                                   |                |
| Lecture 14  | Data Clustering  |                |
| Lecture 15  | Fundamental Concepts of Fuzzy Systems  |                |
| 6   | Machine Learning Algorithms 1  |                |
| Lecture 16  | Linear Regression  |                |
| Lecture 17  | Logistic Regression  |                |
| Lecture 18  | Logistic Regression (Continue)   |                |
| 7   | Machine Learning Algorithms 2  |                |
| Lecture 19  | KNN  | CT – 2, Final  |
| Lecture 20  | Decision Tree, Random Forest, Naïve Bayes Classifier   |                |
| Lecture 21  | Support Vector Machine   |                |
| Midterm Break   |  |                |
| 8   | Machine Learning Advanced Concepts   |                |
| Lecture 22  | Machine Learning Architecture (Training, Testing and Validation)                                       |                |
| Lecture 23  | Over Fitting and Regularization  |                |
| Lecture 24  | Artificial Neural Networks   |                |
| 9   | Introduction to Neural Networks  |                |
| Lecture 25  | Perceptron, Introduction to Activation Functions, Different Activation Functions                       |                |

|  |  |               |                    |                  |
|--|--|---------------|--------------------|------------------|
| Lecture 26   | Multilayer Perceptron  |               |                    |                  |
| Lecture 27   | Multilayer Perceptron (Continue)   |               |                    |                  |
| 10   | Different Neural Network Architectures and Sequential Models 1   |               |                    |                  |
| Lecture 28   | Introduction to Convolution Neural Networks, Basic Concepts of CNN: Edge Detection, Padding, CNN Layers, Pooling Layer |               |                    |                  |
| Lecture 29   | Different Types of CNN: Resnet   |               |                    |                  |
| Lecture 30   | Different Types of CNN: Inception  |               |                    |                  |
| 11   | Different Neural Network Architectures and Sequential Models 2   | CT – 3, FINAL |                    |                  |
| Lecture 31   | Different Types of CNN: ImageNet   |               |                    |                  |
| Lecture 32   | Different Types of CNN: Yolo   |               |                    |                  |
| Lecture 33   | Data Augmentation  |               |                    |                  |
| 12   | Different Neural Network Architectures and Sequential Models 3   |               |                    |                  |
| Lecture 34   | Introduction to Recurrent Neural Networks and basic principles, Sequential processing with RNN, Bi Directional RNN     |               |                    |                  |
| Lecture 35   | Introduction to LSTM and basic principles,   |               |                    |                  |
| Lecture 36   | Sequential Processing with LSTM, Existing LSTM libraries   |               |                    |                  |
| 13   | Advance Architectures in Neural Network  | FINAL         |                    |                  |
| Lecture 37   | Transfer Learning  |               |                    |                  |
| Lecture 38   | Self Attention , Encoder-Decoder Architecture  |               |                    |                  |
| Lecture 39   | Transformer Model  |               |                    |                  |
| 14   | Computer Vision in Healthcare  |               |                    |                  |

| SYNOPSIS/RATIONALE  |  |                       |        |     |    |     |                    |
| This course will provide a discussion of the fluid mechanical principles underlying the operation of physiologic systems, including the heart and circulatory system and the lungs and pulmonary system. Topics to be covered will include blood rheology, mechanics of circulation, arterial wave propagation, oscillatory air and liquid flows and transport of dissolved or suspended solutes. Emphasis will be placed on developing quantitative understanding of blood flow through the arterial system and air flow through the pulmonary system, both in health and in disease.  |  |                       |        |     |    |     |                    |
| OBJECTIVE   |  |                       |        |     |    |     |                    |
| This course aims to develop student’s basic knowledge of fluid mechanics and biofluids to an advance level. The student will gain the understanding of the underlying assumptions and models that are applied when solving fluid mechanics problems. Based on the assumptions made, the student will learn to differentiate between the various approaches and solutions applied to a wide variety of fluid mechanics problems related to physiological processes, medical devices, and laboratory setups as used for testing and measuring. A significant objective is to reinforce the student’s prior knowledge in calculus, differential equations, and engineering as it applies to fluid mechanics. Computational Fluid Dynamics (CFD) and MATLAB will be introduced to emphasize Computer Aided Engineering (CAE). |  |                       |        |     |    |     |                    |

| This course targets the solution of clinical problems by use of implants and other medical devices. Topics include the systematic use of cell-matrix control volumes; the role of stress analysis in the design process; anatomic fit, shape and size of implants; selection of biomaterials; instrumentation for surgical implantation procedures; preclinical testing for safety and efficacy, including risk/benefit ratio assessment evaluation of clinical performance and design of clinical trials, surface modification, corrosion and tribocorrosion aspects of implants and clinical concern etc. |  |                       |        |    |    |     |                    |
| OBJECTIVE   |  |                       |        |    |    |     |                    |
| 1. To familiarize students with various types of implants and their properties.   |  |                       |        |    |    |     |                    |
| 2. To introduce with different biomaterials involved in implant design.   |  |                       |        |    |    |     |                    |
| 3. To analyze different design consideration and standard required for implant designing and fabrication.   |  |                       |        |    |    |     |                    |
| COURSE OUTCOMES & GENERIC SKILLS  |  |                       |        |    |    |     |                    |

| Clinical Problems Requiring Implants for Solution: introduction to irreversibility of injury, overview of regeneration, problems and recommended implants for solution. Principles of Implant design; Missing Organ and Its Replacement: transplantation, autografting, permanent prosthesis, stem cells, in vitro synthesis, induced organ regeneration. Biomaterial for Implants: types and requirements for ideal implant materials, functional properties, surface characterization and preparation, sterilization. Instruments for Surgical Implantation Procedures; Implants for Bone: clinical problem, materials for bone implants, application and procedure involved in bone implantation. Spinal Implants; Dental and Otologic Implant; Implants for Plastic Surgery: materials and their properties, chin implants, jaw implants and chick implants. Implants for Cardiovascular System: cardiac resynchronization therapy and cardiac assisted devices, pacemaker and implantable cardiac defibrillator. Biocompatibility: Local and Systemic Effects; Degradation of Device: corrosion of Metals, degradation of nonabsorbable and absorbable polymers. Nerve Regeneration: synthesis of nerve fibers, device for nerve stimulation (TENS and EMS). Diagnostic Techniques Available for Implant Monitoring. |  |                       |              |               |             |   |   |   |   |                    |    |    |    |

**TEACHING METHODOLOGY**

Lecture and discussion, Co-operative and collaborative method, Problem based method

**COURSE SCHEDULE**

| Week       | Topic   | Assessment            |
|------------|---|-----------------------|
| <b>1</b>   | <b>Clinical Problems Requiring Implants for Solution</b>  | <b>CT – 1, Final</b>  |
| Lecture 1  | Introduction to irreversibility of injury   |                       |
| Lecture 2  | Overview of regeneration: spontaneous and induced   |                       |
| Lecture 3  | Problems and recommended implants for solution  |                       |
| <b>2</b>   | <b>Principles of Implant design</b>   |                       |
| Lecture 4  | Functional performance of the device (mechanical, chemical and attachment vehicle)                      |                       |
| Lecture 5  | Effects of the implant on the body  |                       |
| Lecture 6  | Effects of the body on the implant  |                       |
| <b>3</b>   | <b>Missing Organ and Its Replacement</b>  |                       |
| Lecture 7  | Overview of the methods to use for organ replacement  |                       |
| Lecture 8  | Transplantation, Autografting, Permanent prosthesis   |                       |
| Lecture 9  | Stem cells, In vitro synthesis, Induced organ regeneration  |                       |
| <b>4</b>   | <b>Biomaterial for Implants</b>   | <b>Midterm, Final</b> |
| Lecture 10 | Types and requirements for ideal implant materials  |                       |
| Lecture 11 | Functional properties of the biomaterials (Bulk properties, Surface properties and Chemical Properties) |                       |
| Lecture 12 | Surface characterization and preparation, Sterilization   |                       |
| <b>5</b>   | <b>Instruments for Surgical Implantation Procedures</b>   |                       |
| Lecture 13 | Classes of instruments by function for surgical implantation procedures                                 |                       |
| Lecture 14 | Functions of the instruments  |                       |
| Lecture 15 | Characteristics and uses of the instruments   |                       |
| <b>6</b>   | <b>Implants for Bone</b>  |                       |
| Lecture 16 | Clinical problems that required bone implant  |                       |
| Lecture 17 | Biomaterial used for bone implants (functional, chemical and mechanical properties)                     |                       |
| Lecture 18 | Application and procedure involved in bone implantation   |                       |
| <b>7</b>   | <b>Spinal Implants</b>  |                       |

|                     |  |               |               |                 |
|---------------------|--|---------------|---------------|-----------------|
| Lecture 19          | Types of spinal implants (cages, hooks, plates, pedicle screws, rods, spinal cord stimulator)  |               |               |                 |
| Lecture 20          | Material used and their characteristics  |               |               |                 |
| Lecture 21          | Usage and benefits of spinal implants  |               |               |                 |

| Self-Directed Learning                                       |                    |
| Non-face-to-face learning                                    | 42                 |
| Revision of the previous and (or) subsequent lecture at home | 21                 |
| Preparation for final examination                            | 21                 |
| Formal Assessment  |                    |
| Continuous Assessment  | 2                  |
| Final Examination  | 3                  |
| Total  | 131                |

#### TEACHING METHODOLOGY

|   |   |                |
|---|---|----------------|
| Lecture and discussion, Co-operative and collaborative method, Problem based method |   |                |
| COURSE SCHEDULE   |   |                |
|   |   |                |
| Week  | Topic   | Assessment     |
| 1   | Brain Anatomy   | CT – 1, Final  |
| Lecture 1   | Biology of brain, Structural anatomy of Brain                                     |                |
| Lecture 2   | Functional Neuroanatomy   |                |
| Lecture 3   | Functional Neuroanatomy   |                |
| 2   | Neuroscience Fundamentals   |                |
| Lecture 4   | Molecular Neuroscience  |                |
| Lecture 5   | Neuromuscular junction and motor actions  |                |
| Lecture 6   | Neuromuscular junction and motor actions  |                |
| 3   | Neuroscience Fundamentals   |                |
| Lecture 7   | Cognitive and Behavioral neuroscience   |                |
| Lecture 8   | Neural circuits and systems   |                |
| Lecture 9   | Neural circuits and systems   |                |
| 4   | Neuroscience Fundamentals   | Midterm, Final |
| Lecture 10  | Sensory neuroscience  |                |
| Lecture 11  | Neural information processing and learning  |                |
| Lecture 12  | Translational neuroscience and medicine, Clinical neuroscience                    |                |
| 5   | Neural Disorders  |                |
| Lecture 13  | Mechanisms underlying neurological disorders of stroke, , ,                       |                |
| Lecture 14  | Parkinson’s disease   |                |
| Lecture 15  | Alzheimer's disease or epilepsy   |                |
| 6   | Neural Disorders  |                |
| Lecture 16  | Dementia  |                |
| Lecture 17  | Autism  |                |
| Lecture 18  | Nueroplasticity and neurorehabilitation   |                |
| 7   | Functional Neuroimaging   |                |
| Lecture 19  | Functional neuroimaging basis and applications of EEG, EMG, fMRI, DTI, fNIRS, etc |                |
| Lecture 20  |   |                |
| Lecture 21  |   |                |
| Midterm Break   |   |                |
| 8   | Motor System  | CT – 2, Final  |
| Lecture 22  | Pattern of neuro-signal,  |                |
| Lecture 23  | Neurosignal processing, Brain-computer interfaces,                                |                |
| Lecture 24  | Firing rate estimation, Population vectors  |                |
| 9   | Visual System   |                |
| Lecture 25  | Visual evoked potential (VEP), VEP Stimuli,                                       |                |
| Lecture 26  | VEP Electrode Placement, VEP Waves and Types                                      |                |
| Lecture 27  | Retinal Implants  |                |
| 10  | Auditory System   |                |
| Lecture 28  | Auditory evoked potentials  |                |

|            |   |               |
|------------|---|---------------|
| Lecture 29 | Brainstem auditory evoked potentials                    | CT – 3, FINAL |
| Lecture 30 | Cochlear Implants                                       |               |
| 11         | Neurostimulations                                       |               |
| Lecture 31 | Introduction to Functional Electrical Stimulation (FES) |               |
| Lecture 32 | Muscular FES  |               |
| Lecture 33 | Peripheral FES  |               |
| 12         | Neurostimulation  |               |
| Lecture 34 | Electrocortical Stimulation                             |               |
| Lecture 35 | Transcranial magnetic stimulation                       |               |
| Lecture 36 | Deep brain stimulation                                  |               |
| 13         | Neuromodulation and Applications                        | FINAL         |
| Lecture 37 | Noninvasive Neuromodulation                             |               |
| Lecture 38 | Methods and Functional Applications (TMS, rTMS, TDC),   |               |
| Lecture 39 |   |               |
| 14         | Neuromodulation and Applications                        |               |
| Lecture 40 | Recent Trends in Neural Engineering                     |               |
| Lecture 41 | Case study on Recent Applications                       |               |
| Lecture 42 |   |               |

| SYNOPSIS/RATIONALE  |   |                       |        |     |    |     |                    |
| This course covers the module that include fabrication technology, prototype fundamentals, CNC and CAM manufacturing, liquid, solid and powder based prototyping, biosensor fabrication, tissue regeneration, 3d organ printing and rapid prototyping for bone and prosthetics.   |   |                       |        |     |    |     |                    |
| OBJECTIVE   |   |                       |        |     |    |     |                    |
| <div>1. To develop knowledge and understanding of the commercial use of additive manufacture and 3D printing for biomedical applications.</div> <div>2. To learn how to use biomedical CAD/CAM software to design person specific medical devices.</div> <div>3. To develop knowledge and understanding of biomaterials, and specifically how to select and evaluate biomaterials for a specific application.</div> <div>4. To develop knowledge and understanding of bioprinting and biofabrication, and specifically the techniques by which cells and other biological materials may be processed.</div> <div>5. To develop knowledge and understanding of the additive manufacture processes and process chains which can be used in biomedical applications, including those for biofabrication.</div> |   |                       |        |     |    |     |                    |

| Lecture 3  | Traditional machining: Turning, Milling, Drilling, Boring, Reaming  |                                  |
| <b>2</b>   | <b>Nontraditional Machining, Joining technology and Molding</b>   | <b>CT – 1 and Midterm, Final</b> |
| Lecture 4  | Introduction to various non-traditional machining (Mechanical, Electrical, Electro-thermal and Chemical) process                    |                                  |
| Lecture 5  | Introduction to welding (Laser welding, electron beam welding) and soldering  |                                  |
| Lecture 6  | Overview of molding processes (casting, compression molding, injection molding, extrusion molding)                                  |                                  |
| <b>3</b>   | <b>Introduction to Rapid Prototyping (RP)</b>   |                                  |
| Lecture 7  | Fabrication Technologies, Prototype fundamental   |                                  |
| Lecture 8  | Primary consideration and advantages of rapid prototyping   |                                  |
| Lecture 9  | Classification and functions of different rapid prototyping techniques  |                                  |
| <b>4</b>   | <b>Overview of CNC and CAM (Manufacturing)</b>  | <b>Midterm, Final</b>            |
| Lecture 10 | Introduction to computer numerical control (CNC) and computer assisted manufacturing (CAM) techniques                               |                                  |
| Lecture 11 | Manual and CAM control of CNC machine (Purpose of G-code, M-code and alphabetical command)  |                                  |
| Lecture 12 | Different types of tooling required for CNC mills, lathes and machine centers   |                                  |
| <b>5</b>   | <b>Rapid Prototyping Process</b>  |                                  |
| Lecture 13 | Automated process, process chain  |                                  |
| Lecture 14 | Overview of 3D modeling, data conversion and transmission   |                                  |
| Lecture 15 | Preparation of model, building and postprocessing   |                                  |
| <b>6</b>   | <b>Liquid-Based Rapid Prototyping Systems</b>   |                                  |
| Lecture 16 | Overview of few techniques involved liquid-based RP system (stereolithography apparatus (SLA), cubital's solid ground curing (SGC)) |                                  |
| Lecture 17 | Overview of solid creation system (SCS) and solid object ultraviolet-laser printer (SOUP)   |                                  |
| Lecture 18 | Other liquid-based RP systems and microfabrication  |                                  |
| <b>7</b>   | <b>Solid-Based RP systems</b>   |                                  |
| Lecture 19 | Introduction to laminated object manufacturing (LOM), fused deposition modeling (FDM)   |                                  |
| Lecture 20 | Techniques of paper lamination technology (PLT), Multi-jet modeling system (MJM)  |                                  |
| Lecture 21 | Few more solid-based RP techniques (SSM, MEM, M-RPM etc.)   |                                  |
|            | <b>MID TERM</b>   |                                  |
| <b>8</b>   | <b>Powder-Based Rapid Prototyping Systems</b>   |                                  |
| Lecture 22 | 3D Systems' Selective Laser Sintering (SLS)   |                                  |
| Lecture 23 | Z Corporation's Three-Dimensional Printing (3DP)  |                                  |

|                             |  |               |      |                 |
|-----------------------------|--|---------------|------|-----------------|
| Lecture 24                  | Optomec’s Laser Engineered Net Shaping (LENS), Fraunhofer’s Multiphase Jet Solidification (MJS)      |               |      |                 |
| 9                           | RP Data Formation  |               |      |                 |
| Lecture 25                  | STL file format and problems regarding STL file formats  | CT – 2, FINAL |      |                 |
| Lecture 26                  | Consequences of building a valid and invalid tessellated model                                       |               |      |                 |
| Lecture 27                  | STL file repair, newly proposed formats and standards for representing layered manufacturing         |               |      |                 |
| 10                          | Process Parameters and General Engineering Applications  |               |      |                 |
| Lecture 28                  | Application-Material Relationship, Finishing Processes   |               |      |                 |
| Lecture 29                  | Applications in Design, Analysis and Planning  |               |      |                 |
| Lecture 30                  | Applications in Manufacturing and Tooling; Aerospace Industry; Automotive Industry; Jewelry Industry |               |      |                 |
| 11                          | RP techniques for biosensor fabrication  |               |      |                 |
| Lecture 31                  | Introduction to uses of RP in biosensor fabrication  |               |      |                 |
| Lecture 32                  | RP of microfluidic system  |               |      |                 |
| Lecture 33                  | Functionalization of biosensor and biomaterials compatibility  |               |      |                 |
| 12                          | RP for Tissue Regeneration   | CT – 3, FINAL |      |                 |
| Lecture 34                  | RP technologies in tissue regeneration   |               |      |                 |
| Lecture 35                  | Rationale for using laser assisted bioprinting (LAB), LAB parameters for cell printing               |               |      |                 |
| Lecture 36                  | RP for Scaffold Fabrication  |               |      |                 |
| 13                          | 3D Organ Printing Microvascular  |               |      |                 |
| Lecture 37                  | Biomimetic model for microvasculature printing,  |               |      |                 |
| Lecture 38                  | Microvasculature printing strategies   |               |      |                 |
| Lecture 39                  | Microvasculature post-printing stage   |               |      |                 |
| 14                          | RP for Bone and Prosthetic Limb  |               |      |                 |
| Lecture 40                  | Bone: properties, structure, and modeling  |               |      |                 |
| Lecture 41                  | The aim in designing a prosthetic limb   |               |      |                 |
| Lecture 42                  | A biomimetic approach to design and fabricate Limb   |               |      |                 |
| FINAL EXAMINATION           |  |               |      |                 |
| ASSESSMENT STRATEGY         |  |               |      |                 |
|                             |  |               |      |                 |
| Components                  |  | Grading       | CO   | Blooms Taxonomy |
| Continuous Assessment (40%) | Class Test/ Assignment 1-3   | 20%           |      |                 |
|                             | Class Participation  | 5%            | CO3  | C2              |
|                             | Midterm  | 15%           | CO2  | C3              |
| Final Exam                  |  | 60%           | CO 1 | C2              |
|                             |  |               | CO 2 | C3              |
|                             |  |               | CO 3 | C2              |
|                             |  |               | CO 4 | C4              |

## CHAPTER 7

### ANNEX-A

#### 7.1 Program Outcomes

|              |   |
|--------------|---|
| <b>PO-1</b>  | <b>Engineering knowledge:</b> Apply knowledge of mathematics, natural science, engineering fundamentals and an engineering specialization as specified in K1 to K4 respectively to the solution of complex engineering problems.  |
| <b>PO-2</b>  | <b>Problem analysis:</b> Identify, formulate, research literature and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences. (K1 to K4)  |
| <b>PO-3</b>  | <b>Design/development of solutions:</b> Design solutions for complex engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations. (K5)                 |
| <b>PO-4</b>  | <b>Investigation:</b> Conduct investigations of complex problems using research-based knowledge (K8) and research methods including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions.  |
| <b>PO-5</b>  | <b>Modern tool usage:</b> Create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering problems, with an understanding of the limitations. (K6)  |
| <b>PO-6</b>  | <b>The engineer and society:</b> Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice and solutions to complex engineering problems. (K7)                   |
| <b>PO-7</b>  | <b>Environment and sustainability:</b> Understand and evaluate the sustainability and impact of professional engineering work in the solution of complex engineering problems in societal and environmental contexts. (K7)  |
| <b>PO-8</b>  | <b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice. (K7)  |
| <b>PO-9</b>  | <b>Individual work and teamwork:</b> Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.  |
| <b>PO-10</b> | <b>Communication:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| <b>PO-11</b> | <b>Project management and finance:</b> Demonstrate knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.                         |
| <b>PO-12</b> | <b>Life-long learning:</b> Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change   |

## 7.2 Knowledge Profile

| Attributes |  |
|------------|--|
| <b>K1</b>  | A systematic, theory-based understanding of the natural sciences applicable to the discipline  |
| <b>K2</b>  | Conceptually based mathematics, numerical analysis, statistics and the formal aspects of computer and information science to support analysis and modeling applicable to the discipline  |
| <b>K3</b>  | A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline  |
| <b>K4</b>  | Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline  |
| <b>K5</b>  | Knowledge that supports engineering design in a practice area  |
| <b>K6</b>  | Knowledge of engineering practice (technology) in the practice areas in the engineering discipline   |
| <b>K7</b>  | Comprehension of the role of engineering in society and identified issues in engineering practice in the discipline: ethics and the engineer's professional responsibility to public safety; the impacts of engineering activity; economic, social, cultural, environmental and sustainability |
| <b>K8</b>  | Engagement with selected knowledge in the research literature of the discipline  |

## 7.3 Range of Complex Engineering Problem Solving

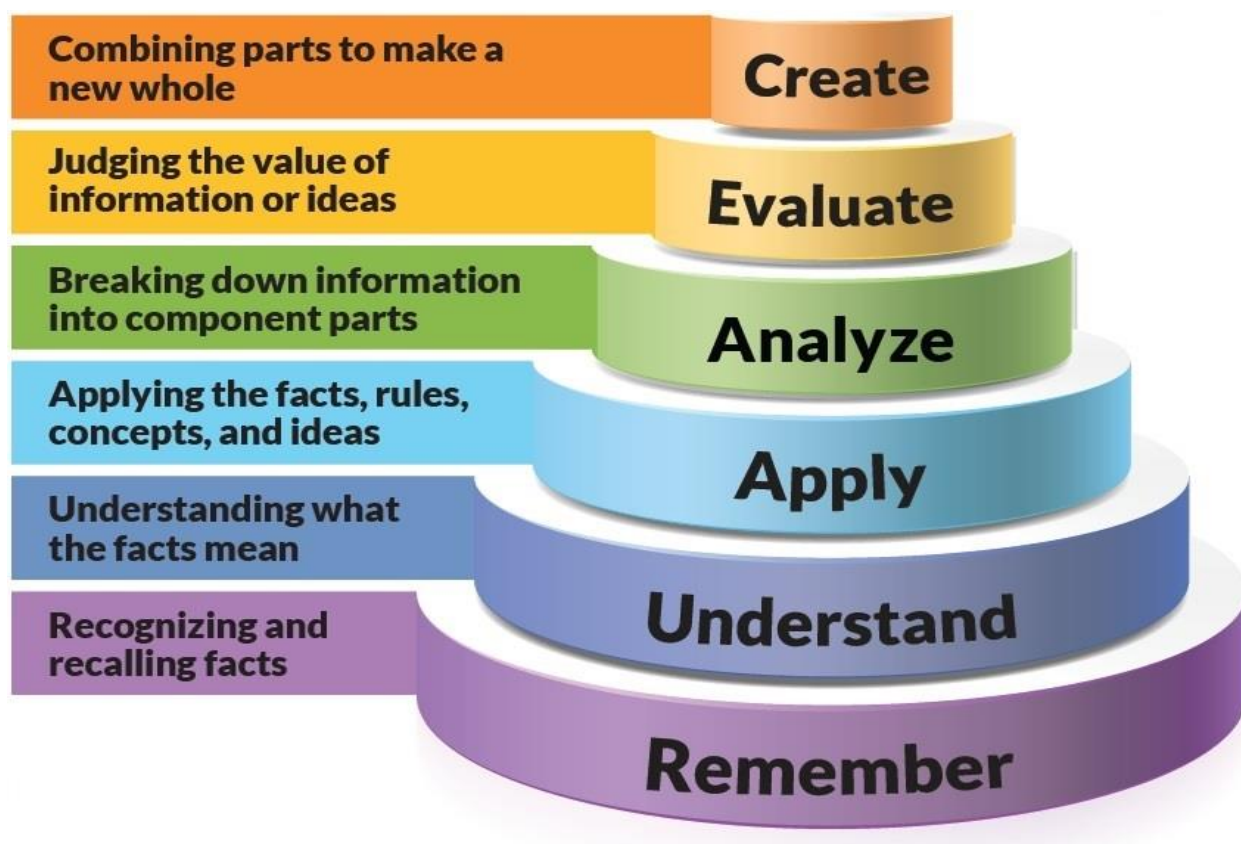

| Attributes   | Complex Engineering Problems   |
|--|--|
| Depth of knowledge required                                    | <b>P1:</b> Cannot be resolved without in-depth engineering knowledge at the level of one or more of K3, K4, K5, K6 or K8 which allows a fundamentals-based, first principles analytical approach |
| Range of conflicting requirements                              | <b>P2:</b> Involve wide-ranging or conflicting technical, engineering and other issues   |
| Depth of analysis required                                     | <b>P3:</b> Have no obvious solution and require abstract thinking, originality in analysis to formulate suitable models  |
| Familiarity of issues  | <b>P4:</b> Involve infrequently encountered issues   |
| Extent of applicable codes                                     | <b>P5:</b> Are outside problems encompassed by standards and codes of practice for professional engineering  |
| Extent of stakeholder involvement and conflicting requirements | <b>P6:</b> Involve diverse groups of stakeholders with widely varying needs  |
| Interdependence  | <b>P7:</b> Are high level problems including many component parts or sub-problems  |

## 7.4 Range of Complex Engineering Activities

| Attributes                                   | Complex activities   |
|--|--|
| Range of resources                           | <b>A1:</b> Involve the use of diverse resources (and for this purpose resources include people, money, equipment, materials, information and technologies) |
| Level of interaction                         | <b>A2:</b> Require resolution of significant problems arising from interactions between wide-ranging or conflicting technical, engineering or other issues |
| Innovation                                   | <b>A3:</b> Involve creative use of engineering principles and research-based knowledge in novel ways   |
| Consequences for society and the environment | <b>A4:</b> Have significant consequences in a range of contexts, characterized by difficulty of prediction and mitigation                                  |
| Familiarity                                  | <b>A5:</b> Can extend beyond previous experiences by applying principles-based approaches  |

## CHAPTER 8

### ANNEX-B

#### 8.1 CO-PO Mapping for Entire Program

## 8.2 CO-PO Mapping by Different Levels

## 8.3 CO-PO Mapping for Sessional and Theory

#### 8.4 CO-PO Mapping for Departmental & Non-Departmental Courses

#### 8.5 CO-PO Mapping for Non-Departmental Courses
